PROCEEDINGS MS. SUTER: Good evening. On behalf of the 3 Federal Energy Regulatory Commission or FERC, Id like to 4 welcome you all here this evening. My name is Maggie Suter and Im the environmental project manager in the Algonquin Incremental Market project or AIM project. We are here this evening to take your comments on the Draft Environmental Impact Statement or Draft EIS or the AIM project. Let the record show that the DEIS comment meeting began at 6:37 $\rm p.m.$ on September 8th in Dedham, Massachusetts. Also with me here at the front table is Karen Gentile with the Department of Transportations Lifeline and Hazardous Material Safety Administration. And I also have Jennifer Lee with Natural Resource Group who is helping 15 prepare the Draft EIS and eventually file the DEIS. Also here this evening, we have from Berth, Amanda Mardiney who 17 is cut at the sign in table and we have Andrea Thornton and Larry Brown who are also with NRG. Anyone of us who has a name tag can help you and answer questions after the meeting if have questions. The U.S. Army Corps. of Engineers, the 22 Environmental Protection Agency and the Department of 23 Transportation Pipeline materials -- Pipeline and Hazardous 24 Materials Safety Administration are participating as 25 cooperating agencies in preparation of the DEIS. Id like to

1 thank those cooperating agencies for the continued 2 assistance with the EIS review process. Also here this evening is Corey Rose from the 4 U.S. Army Corps. Engineers. If you have any questions about 5 the U.S. Army Corps process and their role, please find her. 6 She has also provided some materials at the sign in table 7 and shes got a box in the back to accept any comments for Im going to briefly turn things over to Karen 10 Gentile who is going to over DOTs process and how it relates 11 to the review of the project before coming back to FERCs 12 process. Go ahead, Karen. MS. GENTILE: Good evening everybody. As Maggie 15 mentioned, Im Karen Gentile and I am one of the Community 16 Assistance and Technical Services Managers for the Eastern 17 Regions Pipeline and Hazardous Materials Safety 18 Administration, Office of Pipeline Safety commonly referred Id like to thank you for the opportunity to 21 provide an overview of PHMSAs Office Pipeline Safety 22 program. Upon request from FERC, our office provides 23 support on the National Environmental policy analysis. If 24 Algonquin Gas Transmission receives permission from FERC for 25 its Algonquin incremental market project, PHMSAs office of

1 pipeline safety in cooperation with state partners will 2 provide the regulations for the construction and safe transportation of natural gas through the pipeline to 4 include compressor stations, metering facilities, associated 5 piping and will maintain regulatory oversight over the safety of the pipeline and pipeline facilities throughout PHMSAs Office of Pipeline Safety will perform inspections on natural gas pipeline facilities in Massachusetts as well as on Algonquins plans, procedures and records to insure that the design and construction are in compliance with Title 49, Code of Federal Regulation, Part 192. These are the minimum Federal safety standards for the transportation of natural gas by pipeline. This oversight includes the inspections to insure that suitable materials are used in construction, welding is performed in compliance with industry standards by qualified welders. The pipeline is installed to proper depths. Its protected from coercion, contains pressure limiting devices and is properly tested before its used. 21 Beyond the construction process, PHMSA conducts 22 periodic inspections of the operation and maintenance 23 requirements in Title 49, Code of Federal Regulation, Part 24 192. The operator must establish comprehensive written 25 procedures describing the types and frequencies of

1 monitoring to insure the continued safe operation. The monitoring that an operator must perform includes monitoring the operation and adequacy of its external corrosion for 4 venting systems. Inspecting and testing pressure release devices. Inspecting and operating transmission line valves. Patrolling the right-of-way and surveying for leaks. In addition to those routine monitoring, PHMSA pipeline safety regulations require natural gas transmission pipeline operators to implement integrity management program. These programs require periodic integrity assessment of natural gas transmission pipelines in highly populated area. These assessments provide a comprehensive understanding of the pipelines condition and associated Inline inspection pools frequently referred to as 15 Smart Pigs provide detailed information about pipeline condition. During the integrity inspections, sensors and computers are sent through the pipeline. These devices can indicate whether our pipeline has any defamations or changes in wall thickness. By analyzing the data and collected during these inline inspections, operators can locate and 22 repair areas of the pipeline that maybe damaged or 23 deteriorated. Integrity management programs require 24 operators to detect and correct damages to their pipelines 25 before the damage results in a leak.

Well constructed and maintained pipelines also 2 must be properly operated. Operators must insure that personnel performing operations, maintenance or emergency 4 response activities are qualified to perform these functions. This is to minimize operator error. Operators 6 must implement training and qualification programs for their employees and contractors whose performance is crucial for maintaining the safety of their pipeline and pipeline facilities. 10 Pipeline operators also must implement public 11 awareness programs to improve awareness of pipelines within the community. Operators communicate pipeline safety information to public officials. The public living along the right-of-way emergency responders and excavators. Public awareness programs emphasize the importance of calling 811 prior to excavating. A call to 811 provides notification to all participating utility owners including pipeline operators to mark the location of their facilities and monitor the excavation to help insure their facilities are not damaged. Public awareness programs also include 22 information on how to recognize pipeline emergencies. How to respond appropriately and how to report potential 24 emergencies responders to aid in the rapid response by both 25 pipeline operators and community emergency responders.

In addition to the public awareness program, 2 pipeline operators are required to have written emergency plans in place prior to operation of their facilities. 4 These programs require operators to establish and maintain liaison with fire, police and public officials among other things to acquaint these officials and the operators with their respective responsibilities and resources in planning for and responding to emergencies. These emergency plans must at a minimum provide for establishing and maintaining communication, prompt and effective response and availability of personnel, equipment, tools and materials as needed at the scene of an emergency. These plans help both the operator and the emergency responders know their roles and responsibilities and available resources prior to the need to respond to an incident. 17 If safety inspections find inadequate procedures or that an operator is not following their procedures, PHMSA is authorized to require remedial actions, assess civil penalties and initiate criminal action if necessary. PHMSA has reviewed the Draft Environmental Impact 22 Statement as it relates to pipeline safety. This document 23 specifies that Algonquin will construct, operate and 24 maintain the proposed pipeline to meet or exceed minimum 25 Federal Safety Standards specified in Title 49, Code of

1 Federal Part 192 for the transportation of natural gas by 2 pipelines. Safety has been FERCs primary mission and we 4 understand how important this mission is to you and your community. Again, we thank you for the opportunity to 6 provide an overview of PHMSAs pipeline safety program. MS. SUTER: Thank you, Karen. I notice some of you are standing back. Weve got a couple of chairs up here in the front for those of you who need it and I think theyre 10 bringing a few more in, but dont be shy. I promise we dont So for those of you who havent had an opportunity to attend any of the previous meetings and dont know much about FERC, Im going to give you a very brief overview. FERC is an independent agency that regulates the 16 rates for interstate transmission of electricity, natural 17 gas and oil and the siting of interstate natural gas and 18 hydroelectric facilities. FERC has up to five commissioners 19 who are appointed by the President of the United States with 20 the advice and consent of Senate. FERC is the lead federal 21 agency responsible for the National Environmental Policy Act 22 of 1969, NEPA, and the review of the AIM project and the 23 lead agency for the preparation of the Draft EIS. NEPA requires FERC to analyze the environmental 25 impacts, consider alternatives and the appropriate

1 mitigation matters on proposed projects. In February of this year, Algonquin Gas Transmission filed an application under section 7 of the Natural Gas Act. This project would 4 consist of the replacement of 26.3 miles of existing 5 pipeline with new larger diameter pipeline in the same location. The installation of 11.3 miles of new pipeline. The addition of compression at six existing compressor stations and the abandonment of compression at one of these compressor stations. And this is all spread out throughout New York, Connecticut, Rhode Island and Massachusetts. The primary purpose of this meeting tonight is to give you the opportunity to provide specific environmental comments on the Draft EIS prepared by FERCs staff on the project. It will help us the most if your comments are as specific as possible regarding the proposed project and the Draft EIS. 17 I would like to again clarify that this is a 18 project being proposed by Algonquin. It is not a project being proposed by the FERC. Rather the FERC is the federal agency responsible for evaluating the application to construct and operate the interstate natural gas pipeline 22 facility and for evaluating the natural gas facility as a 23 whole. 24 The FERC therefore is not an advocate for the 25 project. Instead, as mentioned throughout this process, the

10 1 FERC is an advocate for the environmental review process. 2 During our review of the project, we assembled information 3 from a variety of sources including Algonquin, you the 4 public, other state, local and federal agencies and our own 5 independent analysis and field work. We analyzed this information and prepared a Draft EIS that was distributed to the public for comment. A notice of availability of the Draft EIS was 9 issued for this project on August 6, 2014. We are nearing 10 the end of the comment period on the Draft EIS. The comment 11 period ends on Monday, September 29, 2014. All comments received, written or spoken, will be addressed in the final 13 EIS and they are given equal consideration. I encourage you 14 if you plan to submit comments and have not, please do so 15 here today either verbally during the comment portion of our 16 meeting or in writing using one of the forms in the back at 17 the sign in table. You may also submit comments use -- using the 19 procedures cutlined in the Notice of Availability which includes instructions on how to submit comments electronically. We also had a one-pager at that sign in 22 table that provided those instructions. If you receive a copy of the Draft EIS, whether 24 a paper copy or a CD copy, you will automatically receive 25 the final EIS. If you did not get a copy of the draft then

11 1 you are not currently on our mailing list. I apologize. 2 Our mailing list is quite large and is undergoing constant revision. If you would like to get a copy of the document 4 please sign in at the attendants list at the back of the room and provide your name and address and we will make sure that you get a copy of the final DEIS. I would like to remind everyone here this evening that neither the draft or final EIS are decision 9 making job documents. In other words, once they are issued, 10 it does not determine whether the project is approved or 11 not. Im going to differentiate the roles between two distinct groups: The commission and the FERC staff. The first staff present here tonight are part of the FERC environmental staff and we will oversee the preparation of the final EIS for this project. The next step in the environmental review after that Draft EIS was issued. We do not determine whether or not to approve the project. After the final EIS is issued, the FERC commissioners which are up to the five presidentially appointed commissioners I mentioned earlier, 21 will make a determination on whether or not to issue a 22 Certificate of Public Convenience and Necessity to 23 Algonquin. The commission will consider the environmental 24 information in the final EIS, public comments as well as a 25 host of non-environmental issues -- non-environmental

12 1 information such as engineering, markets and rates in making 2 its decision to approve or deny Algonquins request for a certificate. There is no review of decisions by the President or Congress. Thus, maintaining FERCs role as an independent regulatory agency and providing for fair and unbiased decisions. Only after taking the environmental and non-environmental factors into consideration will the commission make its decision whether or not to approve the 10 project. 11 If the commission votes to approve the project and Certificate of Public Convenience and Necessities is issued Algonquin will still be required to meet the conditions of that certificate before it could begin construction. If approved, FERCs staff would monitor the 17 project through construction and restoration performing inspections to document environmental compliance with Algonquins proposed plans and mitigation measures and the additional conditions outlined in the PERC certificate. Now, were going to move on to the part of the 22 meeting where we will hear comments from those who have 23 signed up to speak. If you would rather not speak tonight 24 or dont get to say everything you wanted, you may hand in 25 written comments tonight using the comment form found at the

1 back of the room or you can mail them into the secretary 2 following the procedures outlined in the Notice of Availability in the DEIS. Either way, your comments will be 4 considered. This meeting tonight is being recorded by a court reporter over here to my right. So all of your comments will be transcribed and put into the public record. Therefore, I have a few ground rules to be followed this evening. All speakers must come to the podium up here at 10 the front and speak into the microphone. This is to insure 11 that the court reporter can accurately record and get all of your comments into the public record. Please do not yell a question or a comment out from the audience as this cannot be accurately captured for the public record. I ask that each speaker when you come to the podium first identify yourself and please spell your name 17 for the record. My number one rule also is please show respect for everyone who is speaking. Were now ready to call our first speaker. MS. LEE: The first speaker that we have signed up is Karina Wilkinson. MS. WILKINSON: Hi. My name is Karina 23 Wilkinson, K-A-R-I-N-A W-I-L-K-I-N-S-O-N. Im local coordinator with Food and Water Watch which is a consumer 25 advocacy group that works to insure that the food and water

		14
	1	and fish we consume is safe, accessible and sustainably
	2	produced. We are one of the first national groups to
	3	support a nationwide band on fracking tracking and we have a
	4	force 144,000 supports in the areas where this project is
PM1-1	5	proposed. We oppose the Algonquin AIM project extension
	6	project. We we contend that theres no need for this
	7	project.
	8	Now, specifically on the Draft EIS, I would like
PM1-2	9	to raise three issues. Two related to cumulative impacts
	10	and one related to Radon. So the Draft Environmental Impact
	11	statement does not adequately consider the combined
	1.2	environmental impacts of related to existing and
	13	reasonably foreseeable pipelines within FERCs jurisdiction.
	14	We fail to analyze the cumulative impacts of the related
	15	Atlantic Bridge project which will involve similar
	16	modifications to section of pipeline in the Connecticut,
	17	Rhode Island and Massachusetts. This is a project proposed
	18	by Spectra Energy as well. The environmental impacts of
	19	both the AIM project and the Atlantic Bridge project should
	20	be considered considered together in the environmental
	21	impact statement and we would like to have an opportunity
	22	for the public to review and comment on an analysis of the
	23	cumulative impacts of the related existing and reasonable
	24	foreseeable pipeline including the Atlantic Bridge.
	25	The second point is the analysis needs to take

PM1-1 Comment noted.

PM1-2 See the responses to comments FA3-5 and FA4-24.

PM1-2 (cont'd)		15
(Literary)	I 1	into account the full range of the projects impacts whether
com u)	2	direct, indirect or accumulative as it relates to gas
	3	development. You fail to consider how the environmental
	4	impacts of the proposed project maybe cumulated with impacts
	5	of gas development particularly in the more Marcellus Shale.
	6	The absence of any meaningful analysis of that deprive the
	7	public of a meaningful opportunity to comment on the
	9	proposed project and fail to take a hard look at the
	9	proposed projects impact. So we would, again, like an
	10	opportunity to review and comment for the public to
	11	review and comment on any analysis of any potential impact
	12	that the project would have on natural gas development.
PM1-3	13	Finally, the DEIS falls short of adequately
	14	addressing the risk of Radon exposure associated with
	15	burning the natural gas from from this project. Radon is
	16	naturally occurring. Its a radioactive material that is the
	17	leading cause of lung cancer among nonsmokers in the United
	18	States killing more than 20,000 Americans per year. Shale
	19	gas is piped directly into kitchens just days after
	20	extractions could bring a special higher levels of radon to
	21	American consumers increasing their cancer risk. And the
	22	USGS emphasizes that additional data is needed to better
	23	understand the radon risk associated with shell gas. Yet
	24	FERC has rejected concerns raised about radon exposure. So
	25	again, we would like a more complete analysis of the risks

PM1-3 See the response to comment SA4-4.

		16
PM1-3	1	of radon exposure and we would like an opportunity for the
(cont'd)	2	public to review and comment on a complete analysis of that
	3	risk.
	4	In general, we are asking FERC to reject this
	5	project.
	6	MS. LEE: Thank you. The next
	7	speaker we have on the list is Andrea Doremus.
	8	MS. DOREMUS: Hi. So my name is
	9	Andrea Doremus, A-N-D-R-E-A D-O-R-E-M-U-S. And Im here
PM1-4	10	tonight speaking not as an expert but as a mom who lives up
	11	about a block and a half away from the metering station
	12	across from the quarry and Im also a high school public
	13	school teacher. And I heard nothing about this project
	14	before last Wednesday when I got an email from a local
	15	group. Though, $\ensuremath{\text{I}}$ do understand this process has been going
	16	on.
PM1-5	17	And just very brief comments. I would just like
	18	to know how its possible to get the detailed information as
	19	to how it was determined that there is this great public
	20	demand for this natural gas, you know, increase? And Im
	21	sure somebody has the answer to that but is there a way to
	22	really full as a citizen who now is going to be, you
	23	know, living with this. Can we understand that?
PM1-6	24	And Karen, you spoke about public awareness
	25	campaigns and as given given the dangers, the cost, the

PM1-4 See the response to comment FA6-5.

PM1-5 See the response to comment LA24-2.

PM1-6 See the response to comment IND53-2. Section 3.2.1 of the EIS discusses energy conservation as an alternative to the proposed Project. Impacts on groundwater and geology are discussed in sections 4.3.1 and 4.1 of the EIS, respectively. There are no identified impacts from the Project related to toxic chemical poisoning.

1 tremendous amount of disruption thats going to be caused to 2 the community by building this, you know, for such a long 3 time wouldnt it -- have be better to use all the brilliance 4 and expertise in this room and all the money to teach people 5 to -- you know, to be more -- you know, to conserve more? 6 And -- and just on a very simple -- and that also I 7 understand thats theres many, many leaks in current gas pipes and wouldnt that expertise be used better to close up 9 those leaks so --I guess, I just also want to say in terms of the 11 dangers that begin with the harm to the water tables and the geological integrity of the shelf fields and the general toxic chemical poisoning that my -- my understanding that comes from where this gas is coming from just wouldn't it be 15 better to use our, you know, collective wisdom to just figure out a way to not do this? And I would want to close that despite the best efforts of many smart and caring people so many accidents do happen. I mean, weve seen that and I just am questioning the cost. Its more like Im just one of those people going, you know, the emperor has no clothes. You know, so thats what Im worried about. Okay. Thank you. MS. LEE: Edward Doyle? MR. DOYLE: My name is Edward Doyle, E-D-W-A-R-D 25 D-O-Y-L-E. Im a resident of Dedham and concerned about this

project as it comes through Dedham. I did receive the 920 page report and being a retired engineer, I had plenty of time to kind of sift through the parts that relate mainly to Dedham. And thats the part that concerns me. I really cant comment other than Dedham and West Roxbury. The material that Ive prepared -- a write up that I can give to you. This material addresses only the section that goes through Dedham. This is the longest part of the West Roxbury lateral. Three miles is in Dedham of a five mile length of the West Roxbury lateral. It appears that this gas is only delivered to 12 Boston Gas at the end of the line at the West Roxbury 13 lateral -- lateral on Center Street. And the amount of gas 14 delivered is listed as 30,000 decatherms per day out of a 15 total of 340,000 decatherms. No supply points are shown in 16 Dedham as far as I can see. So I dont see where Dedham is 17 getting any gas. That 30,000 number is only 8.8 percent of the gas that Algonquin is proposing to deliver. Its a small The construction and later operation of the West Roxbury lateral would have substantial negative impacts in the town of Dedham. Some of which would last for the 23 lifetime of the pipeline, decades. The Draft Environmental 24 statement document, documents many of these impacts but 25 generally presents them from the point of view that

PM1-7 FERC regulates the transmission of interstate natural gas. FERC has no jurisdiction over the local distribution system, so we cannot comment on gas service to Dedham.

		19
	1	minimizes their impact on the residents of Dedham and
	2	therefore justifies a project by declaring the inconvenience
	3	and safety risks acceptable.
PM1-8	4	I have identified no positive value to the town
	5	of Dedham from this project. Before FERC gives out approval
	6	to proceed, the town of Dedham needs to conduct an
	7	independent engineering study and evaluate this massive
	8	project and its many negative impacts on the town. FERC
	9	should direct Algonquin to provide funding for Dedham to
	10	select contractors to perform this work and reports that
	11	results to the town of Dedham. It should include an opening
PM1-9	1.2	meeting for the citizens of Dedham at which the full impact
	13	of this pipeline is explained. To date, Algonquin has
	14	avoided such a meeting.
	15	The basic information needed to perform this
PM1-10	16	study evaluation is only become available with the
	17	publication of the draft Environmental Impact statement
	18	which provides a good feel of information. If the West
	19	Roxbury lateral were delayed or eliminated, it would have no
	20	impact on the other parts of the project. It appears to
	21	only be a side stream off of the main Algonquin pipelines
	22	into West Roxbury to one source or one location.
	23	I wanted to address three areas, public safety,
	24	terrorism and route alternatives. I would also like to give
	25	an example of what happens when theres an accident in a

PM1-8 The town of Dedham is free to conduct its own study. We believe the EIS fairly and accurately assesses the impacts on the communities within which the Project lies.

PM1-9 See the response to comment FA6-5.

PM1-10 The impacts of the West Roxbury Lateral by itself are readily ascertained within the EIS. We have not studied the AIM Project without the West Roxbury Lateral, as Algonquin's application included it, and Algonquin's demonstration of the need for this component of the Project meets our criteria for consideration in the EIS.

20 residential area like this. PM1-11 The 920 page draft statement provides 3 significant amounts of information relative to pipeline 4 safety. The pipeline and hazardous safety administration defines high consequence areas as those where gas accidents could do considerable harm to people and their property. The pipeline would go through Dedham as all classified as Class 3 and 4 and comes under this high consequence area. The report also lists the potential impact radius which is defined as the radius of a circle from which the potential failure of a pipeline could significantly impact people or property. The table in the report lists this radius as 302 feet. Thats a hundred yards in every direction from any accident that would take place in this pipeline. I cannot find anywhere a listing of the number of structures or people that fall within this 300 foot distance but is clearly -- clearly quite sizeable. A clue to the amount that might fall into this appears in the information and table H-1 of appendix H which tells us how many structures, residential and commercial are located within 50 feet of the construction area. In Dedham there would be 88 residential buildings and 27 commercial structures within that 50 foot area and it also tells us how far these structures would be from the final center line. They would be between 15 and 100 feet from the settle line of the pipe. I think an

PM1-11 The PIR is provided for all segments of the pipeline in table 4.12.3-1 of the EIS. Identifying the total numbers of dwellings or structures within the PIR would present an inaccurate characterization of the risks involved with a natural gas pipeline in a residential setting. In a hypothetical pipeline rupture, only the dwellings and/or individuals within a single PIR emanating from the site of the rupture would potentially be exposed, not every dwelling/individual within every PIR along the entire pipeline segment. Presenting the total number of structures that fall within the PIR along the West Roxbury Lateral would not be a meaningful illustration of the risk to the public, and in fact, would mischaracterize the risk to the public. Further, the number of homes within the PIR does not accurately reflect the consideration of the probabilistic level of risks to the public. In contrast, all the residents within 50 (or in some cases 100) feet of the pipeline are expected to be affected by construction in some form or another, so presenting these numbers in the aggregate does in fact provide a meaningful way to characterize these impacts.

PMI-11 (centd) 1 explosion anywhere within that when the area of impact, the radius impact is 300 feet would be quite serious. 3 In West Roxbury there are 128 residential and 24 commercial structures in one well, one church was now not in it from the latest I saw. That are from 20 to 100 feet from the pipelines center. By comparison, the total entire Algonquin project has 337 residential and 95 commercial structures within 50 feet of the construction area. This means that the total for Dedham and West Roxbury we represent 64 percent of the total residential structures that are impacted in the project. And 54 percent of the total commercial structures that are represented within the construction area. 14 This is an alarming disproportionate safety risk from the West Roxbury lateral which is slated as I say, to serve it seems only Boston Gas. And it only represents 8.8 percent of the total supply. The total number of structures along the proposed West Roxbury lateral that fall within the 300 foot radius really needs to be determined. There should be a map that shows us all the structures that are within 300 feet of this pipeline. Right new it only shows it only lists. It doesn't show how many are within 50 feet of the construction zone and 100 feet is the further distance thats listed. So theres quite a few more structures that are not in the report that fall within that disastrous	radius impact is 300 feet would be quite serious. 22 circle. The next thing I wanted to address was PM1-12 3 terrorism. Youve made no -- Boston is considered now one of 4 the high terrorist potential locations. It was on the news 5 today. It has a lot to do with the fact we have 60,000 6 college students in the area and a number of them come in 7 from foreign countries. And theres some question -- and 8 theres -- then one person identified from Stoughton who has 9 a -- apparently, a strong association with the group thats 10 causing all the trouble in Iraq. The route through Dedham, the three mile length, 12 makes a tempting target for a terrorist. Im sure the same applies to West Roxbury. It is on or near very accessible public roads. These are high traffic roads. Many times with standstill traffic during rush hours and high yield retail 16 times. The successful terrorist attack at this time 18 would be devastating. The risk of terrorist attacks will 19 extend the full lifetime of the pipeline. I would assume 20 thats many decades, 30, 40 years. Not just when its put in. 21 The draft report indicates that this should be a concern in 22 this report but it -- it really doesnt address it. It says that it falls under Homeland Security. I would suggest that a much lower risk PM1-13 25 alternative route to this lateral should be investigated if

PM1-12 See the response to comment CO7-6.

PM1-13 See the response to comment LA24-3.

23 you really have to get gas to Boston. The route alternative PM1-13 2 discussion in the -- in the report only talks about minor variations in the pipeline through Dedham. I think it needs -- the pipeline is shown -- all the alternatives I saw start with the Westwood Meter station but I don't know why they 6 have to start there. Algonquins pipeline goes up all around Boston, north and south. They don't necessarily have to come from Westwood. Why this delivery of natural gas from Boston Gas have to start at the Westwood Meter station? Why does the supply of natural gas to Boston have to be in West Roxbury and not another location on the Boston gas distribution system? The Algonquin main pipeline appears to surround Boston. I mentioned that. It would appear that there are 15 many other possible routes that could be investigated. So I would suggest a much more extensive unbiased study of 17 alternative routes needs to be made by an entity that is independent of Algonquin Gas. Safe or lower population routes need to be explored. And I just want to conclude by mentioning PM1-14 something Im sure youre all aware of. The San Bernardino, 22 California -- San Bruno, California explosion. A search of 23 the internet for natural gas pipeline explosions and fires turns up many examples. I have attached to this write up an associated press article on just one such recent one.

PM1-14 We agree that all natural gas pipelines involve some degree of public safety risk, as do gas distribution systems, highways, rail transport, power generation and transmission, and so forth. As discussed in section 4.12 of the EIS, natural gas pipeline safety is regulated by stringent safety rules, and natural gas pipelines continue to be a safe, reliable means of energy transportation. Table 4.12.3-2 of the EIS provides numbers of injuries and fatalities associated with gas transmission pipelines in the last 5 years, which include the fatalities the commentor mentioned in San Bruno, California.

```
24
PM1-14
                        Even with the best technologies, accidents
(cont'd)
         2 happen. Particularly as the equipment ages and the
         3 personnel operating it become complacent. Were talking
         4 about some being in place for decades. Could this be a
           vision of what could happen to Dedham or West Roxbury? What
         6 Im talking about is an explosion like this could occur in
            California. This is in San Bruno, California.
                        The article says first the pipeline exploded.
         9 Them the flames like a blowtorch set off the neighborhood
         O overlooking San Francisco Bay and setting San Francisco Bay
            -- set the neighborhood overlooking San Francisco Bay
            ablaze. Flames chucked -- flaming chunks of asphalt hurled
        13 into the air from the blast. Flew into the roof of Bill
         14 McGoolans house. As he watched from the nearby hillside,
        15 one question came to his mind. Why cant someone stop the
        16 tower of flame? The gas flames were shooting 300 feet into
        17 the air. He said, it took 40 minutes before the -- he --
        18 this was occurring 40 minutes after the initial explosion.
        19 When the flames were finally halted, 89 minutes after the
            explosion, residents were left with a survey of damage.
        21 Eight dead, dozens injured, 55 homes left uninhabited.
                        The -- so I mean basically this is the kind of
        23 thing that can happen when you run these things through a
        24 residential area like Dedham and West Roxbury particularly
       25 as time goes by. Not the initial building of the pipeline
```

		25
PM1-14	1	ten years from now, 20 years from now, 40 years from now.
(cont'd)	2	We all know that engineering good engineering
	3	doesnt always work. We see airplanes go down after long
	4	times. We see lots of things where good intent still has
	5	accidents. And I think serious if theres going to be a
	6	pipeline into Boston, it shouldnt be coming through these
	7	high residential areas.
	8	MS. LEE: Thank you. The next speaker is Howard
	9	Sorett.
	10	MR. SORETT: Im Howard Sorett, H-O-W-A-R-D
	11	S-O-R-E-T-T. And I am representing the West Roxbury Civic
	1.2	and Improvement Association. Its a community of members
	13	that all live within the quarry area of the West Roxbury
	14	lateral in West Roxbury.
	15	I think Ed has summarized a lot of what I had
	16	planned to say. I had the forgive me but I came into
	17	this we came into this relatively late and the material
	18	that $\ensuremath{\text{I}}$ have in front of me here that $\ensuremath{\text{I}}$ wanted to comment on
	19	havent gotten feedback from colleagues in the association.
	20	Refers to the Spectra Energy Partners, Algonquin Incremental
	21	Market project analysis of the West Roxbury Crush Stone
	22	operations on construction and operation of the West Roxbury
	23	lateral. And its dated March 31, 2014.
PM1-15	24	For those who dont know, West Roxburys Crush
	25	Stone is the only active quarry that actively dynamites on

PM1-15 See the response to comment FA6-1. Sections 4.12.2 and 4.12.3 of the EIS provide data on incidents, causes, and injuries and fatalities associated with natural gas transmission pipelines.

```
26
    the average of two or three times a week within 500 feet of
 2 the proposed 24 and 16 inch metro gas pipelines. The last
 3 -- I have, I guess, what Ive found interesting after
 4 reviewing this executive -- the executive summary of the
    document is that -- Ill quote.
                Algonquin would also note that blasting in
 7 proximity to a natural gas pipeline is not an unusual
    occurrence along its pipelines system. Algonquin utilizes
 9 industry wide recognized procedures for insuring the safety
10 and integrity of steel pipelines adjacent to blasting
11 activity. The integrity of Algonquins pipelines are
    therefore protected by well-established criteria on blasting
    vibrations based upon extensive research by the Pipeline
    Research Committee International Blasting Consultants, the
15 United States Bureau of Mines and through Algonquins own
16 direct observation of existing blasting operations near its
17 existing in service pipelines. Furthermore, Algonquin
    currently owns and operates a pipeline that runs through the
    active Riverdale quarry near Pompton Lakes, New Jersey.
                Now, this is the part thats interesting here.
21 In that location, Algonquin is notified prior to each blast
22 and its facilities are then monitored during the blasting
23 operations to insure that no harm is done to the safety and
    integrity of the pipeline.
                Now, after reviewing the specs from the GA --
```

		27
PM1-15	1	GZA study, I personally cant find much to dispute.
(cont'd)	2	Certainly with the engineering plan, the planning and the
	3	integrity of the materials, but theres a metric thats not
	4	included and thats the as Ed alluded to the human factor.
	5	Im sure without going into detail about the failures of
	6	historical failures in pipelines, theyre probably not due to
	7	engineering and theyre probably not due to materials.
	9	Theyre we are human and I havent seen a perfect human
	9	yet. This is a line that abuts a number of human lives.
	10	If Algonquin itself is not certain of the
	11	security of its materials and its and the validity you
	12	know, the value of its engineering and needs to monitor
	13	continual performance of the guarry in meeting
	14	specifications then that makes us worried. We would like to
	15	see some metric regarding a predicted failure rate or
	16	historical failure rate. Were quite certain that Algonquin
	17	or an industry wide failure rate. Its a metric that doesnt
	18	seem too hard for the industry to generate.
	19	If, however, individual FERC, the commission
	20	individually can guarantee. Is willing to personally
	21	guarantee the safety of the community that lives in the
	22	proximity of the quarry if theyre willing each individual
	23	personally guarantee our lives then we might consider it.
	24	Thank you. I appreciate the time.
	25	MS. LEE: Thank you. The next speaker is Joe

		28
	1	Bonfiglio.
	2	MR. BONFIGLIC: Thank you. My name is Joseph,
	3	J-O-S-E-P-H, Bonfiglio, B-O-N-F-I-G-L-I-O. And I would just
	4	like to thank the commission for the opportunity to make a
PM1-16	1 5	statement and I would like to be on the record as saying
	6	that I am in favor of the proposed pipeline project because
	7	I believe natural gas is a proven source of energy that is
	9	available today in the volume and the price thats capable of
	9	providing quicker and lasting relief from our high energy
	10	prices were experiencing in this region.
	11	Theres also a tremendous opportunity for
	1.2	employment gain in Massachusetts for work for individuals
	13	working on this project. Like many here, natural gas, much
	14	of it fracked, is the energy source that I have relied on to
	1.5	satisfy most of my energy needs. The same with my family.
	16	The same with my employers. Ive always taken comfort and
	17	perhaps taken for granted the ability just to turn the
	18	thermostat on and turn my heat up in the wintertime or flip
	19	a switch and turn my AC on in the summertime. And to turn
	20	or my plug on all my electrical appliances so they can work
	21	whenever I need them to work and for as long as they need to
	22	Work.
	23	You know, over the past couple of years, its
	24	been easy as I said to take things for granted because the
	25	supply of gas has been relatively reliable, relatively safe

PM1-16 Comment noted.

M1-16 cont'd)	1	and its a good source of energy. And Im but increasingly
	2	so in the past few years, the price of our energy is going
	3	up particularly in this part of the country. The demand has
	4	dramatically outpaced the supply and that problem is not
	5	getting any better. And as a consequence, theres been high
	6	prices thats been putting a lot of burden on a lot of
	7	individuals and employers in this area causing a big impact
	8	to a lot of families.
	9	You know, there was a study not a study but
	10	theres many studies. But there has also been letters
	11	drafted by all six of the New England governors as well as
	12	all the senators from the states of New England basically
	13	citing the impact of the limited pipeline capacity in gas in
	14	the New England region and talking about the problem of the
	15	higher prices. There are many bullet points that come out
	16	on a lot of these studies being done by various groups and
	17	independent groups that talk about the multiples that which
	18	homeowners pay for their energy prices compared to what
	19	homeowners pay in other parts of the country. Its having a
	20	big impact on families and a big impact on businesses as
	21	well.
	22	You know, on a professional capacity, I head up
	23	the Massachusetts and other New England Labor District
	24	Council representing nearly about 20,000 members. We have
	25	many of those members are actively engaged in the gas

30 1 industry right now. And we are working with gas lines every 2 single day. And we are actively training and recruiting new 3 members to meet the needs that a lot of these projects are 4 going to bring forth. And I talked about the job creation component at 6 the onset. In addition to just being a pragmatic approach 7 to providing a fix to the energy needs that we have today, 8 the transmission line projects in and by themselves are 9 going to be tremendous sources of employment. But those 10 will come and go relatively soon. Twenty-four months or 11 whatever. There is a whole host of work thats going to be 12 done as a consequence of the added capacity thats dealing 13 with the upgrading of the pipe infrastructure of many of the local distribution companies. So the employment impact in our region far 16 exceeds the duration of the project of the pipelines 17 themselves. Many industry experts are talking about work that will go well beyond a decade, perhaps two. So in interest of time, Ill cut it short but I 20 think there are some practical and pragmatic concerns that I 21 want to make sure that are on the record for FERC to consider. Thank you very much. MS. LEE: Thank you. The next speaker is Sanford Matathia. MR. Matathia: Good evening. My name is Sandy

31 or Sanford Matathia, M-A-T-A-T-H-I-A. Im legal counsel with Rickman, Soren and Brewster in Boston and Im here tonight representing National Amusements and Legacy Place Properties which together developed and now own and operate the retail complex at the junction of Route 1 and Elm Street in Dedham. As most of you are probably familiar that PM1-17 complex is about a half a million or more square feet of 9 retail space consisting of about 83 retail stores and a 10 cinema containing a few thousand seats. And that commercial complex -- its life blood is convenient access for vehicular traffic to and from the site and that is a primary reason why National Amusements and Legacy Place Properties have been interested in this project and have participated fully 15 in it over the course of the last year beginning with FERCs 16 pre-filing process including public meetings held by the 17 Mass Energy Facility Council including FERCs scoping session review of resource reports. Interim and updated traffic 19 management plans, access licenses with a proponent for boring work and a combination of the project in connection with planning and coordination. 22 Most recently, the project has -- has undergone a rather basic change which I would like to call out on the record for you folks tonight which is a shifting of the pipeline alignment as it comes along Elm Street and runs --

PM1-17 The identified route adjustments have been incorporated by Algonquin into the proposed alignment and are included in the analysis presented in this final EIS. See the response to comment SA13-4. Section 4.9.5.2 and appendix G of the EIS have been updated to include additional information on potential traffic-related impacts and measures to be implemented to prevent unnecessary delays to the motoring public during construction of the West Roxbury Lateral.

PM1-17	1	runs north Route 1. Let me draw it out a little bit more
cont'd)	2	specifically. Its being depicted on the on the boards
	3	outside this hall. However, it was not presented not
	4	presented in the Draft EIS and for that reason it was not
	5	assessed or analyzed in that document which is one focus of
	6	my comment to you tonight at least on a procedural basis.
	7	The revisions to the project essentially shift
	8	the pipeline from what was the northern side of Route 1.
	9	Excuse me, of Elm Street to the southern side of Elm Street
	10	and then crosses over Elm Street to the north and then
	11	proceeds to round the corner, if you will, at Route 1. And
	1.2	instead of running up the east side of Route 1 as was
	13	originally proposed instead crosses over to the west side of
	14	Route 1 and runs up the middle of Route 1. And in turn
	15	crosses the median break at Legacy Place Boulevard.
	16	So the difference is, if you will, between the
	17	plans and the most basic of sense is that it eliminates the
	18	run along the right hand shoulder of the road. Instead, it
	19	goes through the opposite side. In the process, it tends to
	20	decrease or minimize the number of driveway crossings of the
	21	pipeline but in turn generates or creates a couple of very
	22	critical roadway crossings. And those are three as far as
	23	within our area of interest.
	24	One is the crossover from the south side of ${\tt Elm}$
	25	Street to the north side of Elm Street as you approach Whole

PM1-17	1 1	Foods. The second is the crossover of Route 1 from the east
cent'd)	2	side of Route 1 to the west side of One, after you come
	3	around a corner and head up Route 1. Again, in the vicinity
	4	of both routes of a store.
	5	And then thirdly, there was the crossing of the
	6	median break at Legacy Place Boulevard where where
	7	traffic comes in and out of the Legacy Place project onto
	8	Route 1.
	9	We think that those three critical crossover or
	10	crossing points are key to the projects success from a
	11	traffic standpoint in that if they are well designed and hit
	1.2	all the right considerations have the potential to minimize
	13	what otherwise could be significant traffic impacts from the
	14	project. So at a conceptual level, what I would like to
	15	convey to you folks tonight is that we think that this
	16	revision to the projects plan holds the potential to
	17	minimize impacts and if done right will be a positive
	18	development. And for that reason, we would like to provide
	19	our tentative support for that revision and would like to
	20	state for the record that we stand ready to coordinate with
	21	the project proponents in making it work.
	22	All that said, its very difficult for us to say
	23	to give you specific comments as you have indicated.
	24	Were here to receive tonight in as much as the project as it
	25	was presented and the impacts that were analyzed and for

that matter the mitigation measures such as the traffic 2 management plan that were presented in the Draft EIS were 3 all based on a project that is not the one that we 4 anticipate the proponent will proceed with. In that connection, Ive submitted what I call a placeholder comment letter to FERC, which indicates that were sort of betwixt and between an iteration in the project and we stand ready to review the project as revised as soon as it is filed at record and available for comment. All that said, Id like to leave you with at 11 least a few comments that really are independent of the particular project alignment that might emerge and they really apply to any alignment that might be proposed. Two of these comments are on what I call content or substance 15 and to a run process. On content, there is an issue here concerning 17 what I call construction timing. And its quite apparent 18 prior speakers have alluded to the fact that these roads are 19 busy. Theyre filled with cars a lot of the time and theres 20 just not a lot of room for pipeline work to occur during 21 those times when the -- when the roads are filled with cars. 22 And given the fact that construction in this area will be at 23 least a few months in duration, we think that its incumbent 24 upon the planning for this project to identify the points in 25 time that there will be conflict for road use, if you will,

2 the 3 ide 4 on 5 Leg 6 use 7 and 8 hit 9 to 10 tha 11 scf 12 And 13 con 14 the 15 how	tween cars on the one hand and construction activity on so other. And we think that it is a pretty easy exercise to antify what you can anticipate any way will be the demands the road system. And so, for example, in connection with gacy Place not to say that thats the only source of road a by any stretch but things such as back to school traffic it holiday shopping and for that matter box office movie as will have an effect on congestion on the roadways. And the extent that these congested periods can be identified at they should be taken into account in terms of project neduling such that the two do not occur at the same time. It what that in effect means is that the project instruction should be restricted insofar as certain days of a week are concerned. Certain — excuse me — certain its of the day are concerned. Certain days of the week
2 the 3 ide 4 on 5 Leg 6 use 7 and 8 hit 9 to 10 tha 11 sch 12 And 13 cof 14 the 15 how	antify what you can anticipate any way will be the demands the road system. And so, for example, in connection with pacy Place not to say that thats the only source of road by any stretch but things such as back to school traffic diholiday shopping and for that matter box office movie as will have an offect on congestion on the roadways. And the extent that these congested periods can be identified at they should be taken into account in terms of project meduling such that the two do not occur at the same time. If what that in effect means is that the project metuality is a struction should be restricted insofar as certain days of the week are concerned. Certain excuse me certain

16 are	urs of the day are concerned. Certain days of the week
20000	
17 are	e concerned and for that matter certain months of the year
	e concerned. And we would like to go on the record more
18 spe	ecifically on our written comments as to what those should
19 be.	
20	Secondly, in terms of substantive comment, Id
21 lik	e to suggest that construction traffic control is going
22 to	be critical in that we think that the transportation
23 mar	nagement plan thats been presented is a good start but is
24 not	t going to be the end. We think that there need to be
25 boo	ots on the ground. And by that I mean there need to be

		36
PM1-17 (cont'd)	1 1	police detail in place. Not just the police detail that are
	2	indicated by the engineers around a particular work zone but
	3	police details, excuse me, that a police chief in his own
	4	discretion and at his direction might determine day-to-day
	5	as needed in order to keep things moving.
	6	In terms of process comments, my first comment
PM1-18	7	is that given the change in the project that it may be
	9	warranted that a supplemental Draft EIS be prepared after
	9	revised project plans and a correspondingly revised traffic
	10	management plan are submitted. We would like to reserve
	11	judgment on that subject pending review of those materials
	1.2	and provide you with our comments and suggestions as to what
	13	process might make sense given the content of those filings.
	14	And then lastly, what I would like to say is
	15	consistent with a prior speaker who talked about the human
	16	factor which is all of us can attempt to analyze this
	17	project and put our best thinking into place but theres
	18	almost no doubt that were all going to be outwitted and
	19	things that emerge in the field during construction will be
	20	things that we need to deal with on the spot. Legacy Place
	21	for its part has many driveways, roadways and emergency
	22	outlets in a large part of the project area and we stand
	23	ready to work with the project to make it all work and we
	24	hope that it goes the other way. Thank you very much.
	25	MS. LEE: Next up is Carol Donovan.

PM1-18 See the response to comment FA4-1.

Public Meetings

		37
	1	MS. DONOVAN: My name is Carol Donovan,
	2	C-A-R-O-L D-O-N-C-V-A-N. I work in the Dedham public
	3	schools. I have at least one relative who works at Legacy
	4	Place. I have many relatives who live in West Roxbury and
	5	some who go to school at Catholic Memorial which seems to be
	6	very close to one of the points on the board out there.
PM1-19	7	I want to say that I agree wholeheartedly with
	9	the four people who have spoken against this project. I
	9	think that theres too too much possibility of danger for
	10	lives as well as property and I wish that someone would be
PM1-20	11	thinking about may be providing jobs for people. Training
	1.2	them how to make solar panels and install solar panels and
	13	providing them at a very low cost to any homeowner willing
	14	to use them. Thank you.
	15	MS. LEE: All right. Now the next speaker is
	16	Henry Cohen.
	17	MR. COHEN: Hi. My name is Henry Cohen.
PM1-21	18	H-E-N-R-Y C-O-H-E-N. Im here on behalf of the Boston City
	19	Counselor at large Michelle Wu. She apologizes that she
	20	couldnt make it. But would like to go on record to voice
	21	her concerns about the lack of neighborhood process. Weve
	22	gotten a lot of calls and complaints from constituents that
	23	the first time they heard about this project was last week
	24	and that was the day of a meeting. So very concerned about
	25	the lack of a process.

PM1-19 See the responses to comments SA4-5 and PM1-14.

PM1-20 Comment noted. Economic impacts associated with the Project including projected workforce numbers and economic benefits are discussed in sections 4.9.1 and 4.9.9 of the EIS, respectively.

PM1-21 See the response to comment FA6-5. The purpose and need of the Project is identified in section 1.1 of the EIS.

		38
PM1-21	I 1	And weve also received concerns from
(cont'd)	2	constituents regarding the actual route of the pipeline
	3	going right by West Roxbury Court and concerns in general
	4	about the need of this pipeline. Counsel Wu looks forward
	5	to submitting further details on line. Thanks.
	6	MS. LEE: Thank you. Rita Beckman?
	7	MS. BECKMAN: Hi. Im Rita Beckman. Thank you.
	9	For allowing me to speak. Its R-I-T-A B-E-C-K-M-A-N. Im a
	9	nurse practitioner and a resident of Newton and I just heard
	10	about this project by a fluke email last week.
	11	So basically, I want to say that I dont trust
	1.2	the Spectra Company which is a \$20 billion company. And I
	13	want to read a little bit to you about the 2013 Spectra
	14	report which I pulled from the computer today.
PM1-22	15	And the title of this page is Spectra Energy
	16	Spills in 2013. Spectra Energy established a target to
	17	improve its performance and the number of reportable spills.
	18	Unfortunately, we do not meet our expectations of continued
	19	improvement regarding the number of reportable spills in
	20	2013. Our target for 2014 is a 10 percent reduction of the
	21	number of spills from our 2013 actuals. Let me just repeat
	22	that again. The target was a 10 percent reduction in the
	23	number of spills from our 2013 actuals. Clearly, only a 10
	100000	
PM1-23	24	percent reduction still affects the emergencies that were

PM1-22 The cited material is in reference to liquid pipeline spills. The proposed Project is a natural gas transmission pipeline, and this report is in applicable to the Project.

PM1-23 Comment noted.

		39
PM1-23 (cont'd)	1	asthma and symptoms of headaches and dizziness that occur
	2	when gas leaks.
	3	So again, I dont trust the Spectra Company, a
	4	\$20 billion company and I dont think these pipes should be
	5	laid anywhere in the country. Thank you.
	6	MS. LEE: Susan Bergman?
	7	MS. BERGMAN: Hi. Im Susan Bergman, S-U-S-A-N
	9	B-E-R-G-M-A-N. Im a physician. I work in Framingham. Im a
	9	resident of Newton. Im from Rhode Island and I spend quite
	10	a bit of time in Dedham and West Roxbury.
PM1-24	111	It seems to me that there are far too many
	12	environmental and health risks to justify increasing natural
	13	gas consumption on such a large scale in the first place.
	14	We havent even started to tap the potential offered by the
	15	low hanging fruit of plucking leaks, insulating buildings,
	16	using solar panels and wind energy and most of all avoiding
	17	waste. It seems like leaving doors open during the summer
	18	in businesses so that when you walk by you feel the air
	19	conditioning. Grocery stores that are pretty much as cold
	20	as freezer because there are no doors, no its just waste
	21	that is pretty easy to fix and might reduce the need for the
	22	amount of disruption were talking about.
PM1-25	23	The clean energy alternatives are also not
	24	considered adequately in my opinion. We all know that
	25	fracking contaminates ground water and that water is a much

PM1-24 Comment noted.

PM1-25 See the responses to comments FL2-2, FL4-11, and IND2-2.

		40			
PM1-26	1.1	more vital resources to all of us than oil or any or gas	PM1-	-26	See the responses to comments FA4-24 and IND71-2.
F.N11-20	2	or any other fossil fuel. Contaminating ground water and			
	3	causing instability of the underground area are just the			
	4	beginning. Were already starting to see an increase in			
	5	earthquakes where theyve never occurred before. And			
	6	contamination of ground water where fracking is going on.			
PM1-27	1 7	Were also losing open space and trees. Invasive			
2.	9	plants are encroaching on whatever is left. Digging the	PM1-	-27	Noxious weeds and other invasive plant species, including management
	9	pipeline with the offsets that are meeded around the project			discussed in section 4.5.2 of the EIS.
	10	and clearing that would have to happen to even get the			
	11	equipment in is certainly going to make that worse.			
	.12	The policies and procedures describe the			
M1-28	13	disturbing tendency of the federal government to sometimes	PM1-	-28	See the response to comment IND143-5.
	14	value form over function. I don't care if the manuals are			r
	15	pretty. I care a lot more that the air and water are clean			
	16	and we still literally have birds and bees.			
	17	If the project is treated the way the oil spill			
	18	in the Gulf of Mexico was treated, I have no confidence that			
	19	its safe. The Draft EIS is not available in hard copy form			
	20	tonight. I didnt even know about this until a week ago. I			
	21	would definitely add additional comments when Ive had a			
	22	chance to review the whole document.			
	23	And finally, the costs estimates cited dont	PM1-	-29	See the response to comment IND143-6.
M1-29	24	include the health costs, the risks of worsening climate			
	25	change, the loss of habitat and the deforestation. And			

41 those costs certainly deserve consideration. Thanks. MS. SUTER: Before Jen calls the next speaker, Im just going to remind everybody. Because there are a number of you who were recently notified about the project and may not already be on a mailing list and have probably signed up this evening to get the final EIS, I am going let you know. The default for FERC is for you to receive a CD copy of the document. That's to save on printing costs, etcetera, and mailing costs and all that. If you want a 10 paper copy, you have to let us know which theres probably a 11 box to check or something along those lines. So just so that everyone is aware, you will receive a CD copy unless you tell us that you want a hard copy. Thank you. MS. LEE: Next up is Pat Watson. MS. WATSON: Hi. My name is Pat Watson. P-A-T, last name W-A-T-S-O-N. Some of the points Im going to make 17 is -- maybe a little repetitive but I think theyre important. This natural gas as many people have said, were PM1-30 20 talking about frack gas. We really have to -- its -- we 21 just can't pretend that, you know, this gas is here and were 22 going to pipe there. This -- this frack gas is coming from 23 the Marcellus Shale, Pennsylvania and other states, New 24 York. Its just not -- its not only those states are not only been impacted environmentally, theyve been impact

PM1-30 Your concerns regarding the impacts of hydraulic fracturing are noted. See the responses to comments FA4-24 and IND127-7.

humanly. People are getting sick. People are getting PM1-30 2 hospitalized because of the fracked gas. Fracked gas, the 3 process is that they -- companies have to inject chemicals 4 into the ground to get the natural gas -- to get -- Im sorry -- to get the frack gas out and the chemicals that they The most chemicals they use is a trade secret. We as a public are not allowed to know what chemicals are 9 used in the fracked gas. So this fracked gas is being 10 transported up. Going to be transported to Massachusetts and Dedham and other towns. So when there are leaks and we know there will be leaks thats part of the gas pipeline. There are leaks. Fact. No question. So, you know, the environmental impact is just -- is the water, the air we breathe and the children, future children. Okay? All of this is going to be affected. Theres no -- I dont think theres any questions from what everybody has spoken about. Thats the first point. The second point is as the retired engineer from PM1-31 20 Dedham mentioned that theres a lot of gas and this very 21 small percentage thats being used in this area. So where is 22 that other gas going to be used? We have in, I believe its 23 Chelsea an L&G plant? Im sorry -- facility that was used for ex -- import and Ive been told -- Ive been speaking with Senator Markeys aides so that an export can easily be turned

PM1-31 See the response to comment CO15-4. Also, as section 1.1 of the EIS explains, even if precedent agreements were not in place for the entire proposed capacity, to be exported, the process of liquefying the gas involves specialized equipment at a specific export facility. Currently, no existing export facilities or infrastructure exists on the east coast. In addition, the development of any potential nearby export facility would take several years to develop, advance through the regulatory process, and be constructed. This is not an easy or simple switch for the existing import facilities.

		43		
PM1-31	1 1	into an import facility. Im sorry. An import facility can		
(cont'd)	2	easily be turned into an export facility so if people are		
	3	wondering where this gas is? Im wondering too. Is this gas		
	4	going to end up being exported to other countries because		
	5	the percentages dont really add in the from what the		
	6	retired engineer I was listening to him saying. Saying		
	7	that it just doesn't add up. So I don't think were getting a		
	8	full picture of why theres so many gas pipelines appearing.		
PM1-32	. 9	And I think my last point is that I feel that	DM1 22	G 41
PM11-32	10	the public has not been well informed about (a) these public	PM1-32	See the
	11	hearings, (b) about the pipelines. I think that as much as		
	1.2	you may have put the information out there to people that		
	13	this is happening, its not working. You've heard people come		
	14	up here and say that they just found out last week. Well,		
	15	the process has failed. The process has failed. People		
	16	have not had enough time to even to figure a lot of this		
	17	out yet. I just I just think that you need to go		
	18	reconsider a double pipeline. Thank you.		
	19	MS. LEE: And the next speaker on the list is		
	20	Catherine Arnold.		
	21	MS. ARNOLD: My name is Catherine Arnold.		
	22	C-A-T-H-E-R-I-N-E, last name Arnold, A-R-N-O-L-D. A		
	23	resident of West Roxbury. Im also a teacher in the Boston		
PM1-33	24	public schools. I live about two blocks from the the		
201020020	25	quarry and when they blast in the quarry, my whole house	PM1-33	See the

PM1-32 See the response to comment FA6-5.

PM1-33 See the response to comment FA6-1.

		44
PM1-33	1	shakes like theres been an explosion in the basement. Its
(cont'd)	2	absolutely shocking. It was at least when I first moved in.
	3	So I have really extreme concerns about the pipeline going
	4	through that close to the quarry. I agree with a lot of the
	5	people that have been talking about the kind of mistakes
I	6	that happen.
PM1-34	7	I understand that I had people Id also
	8	like to complain about the public process because I only
	9	found out about this last week as well and its its a real
	10	concern that we havent had time to inform ourselves about
	11	what the real risks are and really dig into the information.
	12	And I appreciate the people here that have done some of
,	13	that. You know, and put some of that information out there.
	14	
	15	So Im concerned about the the danger. Im
PM1-35	16	concerned about the use of the natural gas. I dont and
PM1-35	17	the transparency of whats why its happening. Why why
	18	this is being done? Why National Grid feels they need more
	19	natural gas and why Spectra is increasing the size of the
PM1-36	20	pipeline? Im concerned about the metering station being
P.VII-30	21	near the quarry. So, you know, Im opposed to the whole
	22	process and the whole pipeline. Thank you.
	23	MS. LEE: The next speaker is John St. Amand.
	24	MR. ST. AMAND: Good evening. My name is John
	25	St. Amand and its J-O-H-N S-T period, A-M-A-N-D. I am the

PM1-34 See the response to comment FA6-5.

PM1-35 Section 4.12 of the EIS addresses reliability and safety. Purpose and need for the Project is addressed in section 1.1 of the EIS.

See the response to comment FA6-1.

PM1-36

		45		
	1	president of the Charles River Spring Valley Neighborhood		
	2	Association, West Roxbury. So I speak on my points as well		
	3	as the points of the people in our neighborhood.		
	4	While I would like to speak at length or in the	PM1-37	See the response to comment FA6-5.
PM1-37	5	brief at least about details specific to the project. The		See the response to comment this en
	6	lack of public process or hearings and presentations that		
	7	allow interaction back and forth with the individuals in		
	9	these neighborhoods has not been readily available. And on		
	9	that point, I would strongly suggest a second hearing with a		
	10	formal presentation process that would allow for individuals		
	11	like myself and other groups and leaders from Boston and		
	1.2	Dedham to ask questions that will be answered in that		
	13	evening.		
PM1-38	14	I would also strongly suggest recording of the	PM1-38	Transcripts of the public meetings are available on the FERC website at
	15	presentation and that hearing and posting it on line that		www.ferc.gov using the eLibrary link and entering docket No. CP14-96.
	16	would allow people who are not able to attend to understand		
	17	the process and the answers that were provided. Boston has		
	18	a strong history of having this give and take with projects		
	19	of this size, especially this size. And I would strongly		
	20	recommend that we even move forward in having a second		
	21	hearing so that we can make sure that any of the positive		
	22	and negatives of these projects are put out in the public.		
PM1-39	23	Again, I wish I could speak with more detail on	D) (1 20	0.1
F.W.1*-39	24	specifics but I have asked you to reach out to the leaders	PM1-39	See the response to comment FA6-5.
	25	in Boston, political as well as the majors office and to		

		46
PM1-39	I 1	find a better strategy so that we can actually have better
(cont'd)	2	information that is concise and to the point about what
	3	issues and concerns we as a neighborhood and associations
	4	that we represent have so. Thank you for your time.
	5	MS. LEE: Thank you. Chris Rusk?
	6	MR. RUSK: Good evening. My name is Chris Rusk.
	7	C-H-R-I-S R-U-S-K. I am here on behalf of Major Walsh and
	9	the city of Boston and also as a West Roxbury resident.
	9	Major Walshs primary concern is that of the
PM1-40	10	safety and the quality of life for residents in West
	11	Roxbury. And last week the major sent a formal letter
PM1-41	1.2	questioning that this meeting be postponed to the conflict
	13	of tomorrows primary election for many of the active
	14	residents of West Roxbury.
	15	Weve also received many requests to hold another
	16	community meeting to better educate and inform members of
	17	West Roxbury. Thats something that the mayor would like to
	18	support due to the fact that many of them cannot attend
	19	tonight and many of whom did not have any notification of
	20	this meeting to begin with. Thank you very much.
	21	MS. LEE: The next speaker is Carolyn Nikkal.
	22	MS. NIKKAL: Hello. My name is Carolyn Nikkal,
	23	C-A-R-O-L-Y-N N-I-K-K-A-L and I wish I had known about this
	24	early enough to really pull together a better presentation
	25	than what I am about to make.

PM1-40 Section 4.12 of the EIS addresses safety and reliability.

PM1-41 See the responses to comments FA6-5 and IND92-2.

		47
PM1-42	1	All I can say is that I am very disturbed about
	2	the lack of proper notification and Im very concerned about
	3	the overall lack of environmental considerations for this
	4	project. Not only for this specific routing and specific
	5	pipeline areas and specific dangers to these communities
	6	which are a big focus tonight. But a lack of consideration
	7	for the larger impact of the whole process by which this gas
	8	is being explored, developed and piped to this area and then
	9	shipped to God knows where. We don't have a clear picture of
	10	that. We certainly should.
	11	We know about climate change. We know that we
PM1-43	1.2	have not yet reached the one degree mark from pre-industrial
	13	civilization and already we are suffering increased drought,
	14	increased severe weather, increased irregularity in the
	15	weather and increased fires, increased flooding, increased
	16	environmental danger from the increase in global
	17	temperature.
	18	We know that we have only we have not even
	19	reached the one degree mark. If we are to keep under the
	20	two degrees of global warming, we need to keep 80 percent of
	21	the already discovered fossil fuels in the ground and
	22	rapidly move toward renewable resources. True renewable
	23	resources. We can no longer continue to develop fossil
	24	fuels. The earth cannot tolerate it. We have no option but
	25	to make drastic changes and to at this point with what we

PM1-42 See the responses to comments FA4-24, FA6-5, and CO15-4.

PM1-43 See the responses to comments FA4-23, CO7-3, and CO7-5.

		48
PM1-43 (cont'd)	1	know as a human species to encourage an expensive extension
(conta)	2	of fossil fuel infrastructure is unfathomably stupid.
	3	I only have one planet. My other planets is not
	4	done yet and its not likely to be done. We have to start
	5	developing renewables at an accelerating rate and we can do
	6	so. Many plans have been suggested. I think of one at
	7	Stanford University that recommends how every state in this
	9	country can rapidly, efficiently and economically move
	9	towards using renewables and eliminating fossil fuels. If
	10	we dont do that, we are dead. As a planet we well, yeah.
	11	The rock will survive. Were talking about human life. When
	12	human life and human civilization is going to be able to
	13	take this wanton increase of fossil fuels.
C	14	Now, I would like to see for an environmental
PM1-44	15	impact statement an impact of the total environmental
	16	impact. Not just a fist stretch of a pipeline but from the
	17	exploration phase to the deforestation phase to all of the
	18	fracking phase. The increase in water pollution, air
	19	pollution, earth quakes and the massive leak of nothing.
	20	Natural gas or I prefer to call it unnatural gas in this
	21	case because its rather unnatural. We don't know what
	22	chemicals are in it as has been previously cited.
	23	Its nothing. Nothing is 20 times more dangerous
	24	as a greenhouse gas than is carbon dioxide. Twenty times
	25	more dangerous in terms of global warming. And were talking

PM1-44 See the response to comment FA4-24.

drilling, in the way the pipelines are managed out in the field. Were talking about increasing the danger to this planet in a way that is unacceptable. And I dont think a planet in a way that is unacceptable. And I dont think a narrowly drawn environmental impact statement that deals with, you know, the promises that these pipelines wont leak well guess what? I have a gas pipeline leak right in front of my house right now. And it scares the bejesus out of me. What is going to happen to these wooden houses that we live in if any kind of explosion happens? We cannot tolerate this kind of danger. And we need an environmental review thats going to cover the real danger to this planet. Thank you very much. MS.LEE: Thank you. The next speaker is Jessica Porter. MS. FORTER: My name is Jessica Forter. I live in Dedham. Thats a hard act to follow. So Im also opposed to fracked gas. Im very concerned about climate change. Im questionologic of enabling unfettered consumption of fossil fuels. I dont understand why wed expand access right now. But I really actually want to talk to you today			49

PM1-45 See the responses to comments SA4-5 and CO14-25. Section 4.13.3 of the EIS states that the majority of fatalities from pipelines are due to local distribution pipelines not regulated by FERC. In general, these distribution lines are smaller diameter pipes and/or plastic pipes that are more susceptible to damage.

PM1-46 The purpose and need for the proposed Project are presented in section 1.1 of the EIS.

PM1-47 All residences within 50 feet of the construction work area have a site-specific residential construction plan prepared by Algonquin (see section 4.8.3.1 of the EIS).

3 4 5 2 6 7 8 9 10 11 12 13 14 15 15 16 16 16 16 16 16	I have three areas of concern, I would like to speak to. The first is a lack of process. I think youve heard over and over from these comments that people did not feel educated about the pipeline until recently, about these meetings. And I will argue that that suggests that Spectra and Algonquin are not actually worthy of respect. I don't think theyre holding up their end of the bargain. I don't trust them at this point. I was not aware even though Im the butt of the meetings last year so I see on your cite and your flowchart that there were meetings last year for the public. I have a feeling that those were open and in name only but not really widely advertised. And I have a lot of concern about granting a permit for them when they don't seem to be responsible of them thinking about the public.
2 3 1 4 5 6 7 8 9 10 11 12 13 14 15 15 PMI-49 16	heard over and over from these comments that people did not feel educated about the pipeline until recently, about these meetings. 14 j	permit for them when they dont seem to be responsible of them thinking about the public.
15	them thinking about the public.
PM1-49 16	
PM1-49	
17	Im mostly very concerned about safety. Im
	frankly terrified about being on a pipeline thats, you know,
19	a few miles away from a quarry. Im terrified of being 30
19	feet from a pipeline that will be constantly driven over by
20 1	heavy trucks and which I feel that impact every day causing
21 1	my house to shake. So it scares me to think about a
22	pipeline under a road that if trucks are making house shake
23	30 feet away, I cant imagine what its doing to the pipe.
24	That concerns me.
PM1-50 25	And Im also concerned about our quality of life

PM1-48 See the response to comment FA6-5.

PM1-49 Section 4.12.1 of the EIS discusses federal safety standards for natural gas pipelines and how these standards are applied in HCAs. Section 4.12.3 of the EIS discusses safety-related concerns and other specific measures that Algonquin has proposed or that we are recommending to further address public safety concerns. With respect to the impact that soil vibration from trucks at pipeline road crossings, there are tens of thousands of such pipeline road crossings in the United States; neither the FERC nor the PHMSA consider this to be a significant safety concern, with standard design and construction practices. See also the response to comment FA6-1.

PM1-50 See the response to comment SA13-4.

51 in terms -- well, the short term and long term particularly PM1-50 2 short term during the construction. You know, contrary to National Amusements I actually would love to have any construction happen during the day because I have, you know, in addition Im one human face from my house. I have three other humans and one canine in my house and two of those humans go to school every day and when theres any kind of construction project thats at night, we lose sleep. And that has a really serious impact on our family. That has an impact on my childrens grades. It has an impact on my 11 ability to do my job. 12 So Im very concerned about Spectra -- I think it 13 was just this past Thursday at the Dedham Board Selectmans PM1-51 meeting didnt really have very clear answers about how long 15 they would be doing construction in our neighborhood which 16 is a residential neighborhood. They couldnt give us a sense 17 of the number of days. Just the number of nights we would 18 be impacted. They couldnt give us a sense of how long the roads would be open then which also will impact our 20 neighborhood in terms of noise and when the final 21 construction paying would happen. So I think it will have 22 serious, serious quality of life impacts for our 23 neighborhood. 24 I would urge you to deny the permit all 25 together. And if you -- if FERC does decide to the project I

PM1-51 Traffic-related impacts associated with construction of the proposed pipeline segments, including the West Roxbury Lateral, are described in section 4.9.6 and appendix G of the EIS. The anticipated timing of construction for the West Roxbury Lateral segment is discussed in section 2.4 of the EIS. Site-specific residential construction plans for residences within 50 feet of the Project are provided in appendix H of the EIS. As recommended in section 4.9.5 of the EIS, Algonquin would file a detailed construction schedule, including time of day restrictions.

		52
PM1-52	1 1	dont Im not familiar with how the conditions of
	2	certificate work but I would hope that if it was granted
	3	that there would be conditions that rate in that would
	4	empower state and local boards to require Algonquin to
	5	address quality of life issues. To build sound barriers for
	6	neighborhoods that will be impacted. For limiting
	7	construction times, for meeting timetables for repaying.
PM1-53	9	And I would just say in general, I would hope
	9	that in any kind of traffic management plans the residential
	10	impact would be considered at least as equally if not more
	1	than commercial impact. Thank you.
	12	MS. LEE: Next speaker Judy Kolligian.
	13	MS. KOLLIGIAN: Hello. Im Judy, J-U-D-Y,
	14	Kolligian, K-O-L-L-I-G-I-A-N. I just realized, I brought
	15	the wrong piece of paper up here but $\ensuremath{\mathbb{I}}$ think $\ensuremath{\mathbb{I}}$ can do
	16	without it.
	17	I work on a volunteer basis with Boston Climate
	18	Action Network which is a small kind of neighborhood
	19	climate change prevention or slowing down organization.
	20	And we have been waging a gas leaks reaching a
PM1-54	21	campaign to try to raise public awareness of our dangerous
	22	the gas leaks are. Theres a team at Boston University
	23	who spent much time and effort mapping of all of the gas
	24	leaks in the city of Boston. I don't know about Dedham. I
	25	don't know about West Roxbury specifically. But when in

PM1-52 Section 4.11.2.3 of the EIS describes construction noise impacts, including construction timing. Any conditions regarding construction timing and noise would be set forth in the FERC's Certificate of Public Convenience and Necessity.

PM1-53 Comment noted. Section 4.9.5.2 and appendix G of the EIS have been updated to include additional information on potential traffic-related impacts and measures to be implemented to prevent unnecessary delays to the motoring public, including local residents, during construction of the West Roxbury Lateral.

PM1-54 See the response to comment IND53-2.

M1-54	I 1	Boston, its estimated there are that there are at least
ent'd)	2	4,000 gas leaks. Theres an explosion in Dorchester last
	3	winter or sometime during the last few months which, you
	4	know, demolished the home. Anyway, what I was thinking on.
	5	I was looking at the three of you and thinking about FERC
	6	and its position and the limits of its ability. I don't
	7	know whether you all have jurisdictions specifically over
	8	the gas leaks in any particular way. But I kept thinking
	9	that you all are you all have outlined so many different
	10	wonderful safety mechanisms.
	11	Article 49 and or Title 49 and all kinds of
	12	safety inspection procedures and regulations and everything.
	13	But I was thinking that you are like a bunch of physicians
	14	who are taking incredible care of how the transmission of
	15	blood into your patients arm is going. With clean piping
	16	and pristine needles but what youre failing to see is that
	17	the patients legs, the natural gas infrastructure has 4,000
	18	leaks in Boston and I don't know how many in the other
	19	towns.
	20	So I guess Im saying that until these gas leaks
	21	can be until a handle can be gotten on the correction of
	22	that any safety mechanisms you guys have about laying any
	2.3	pipeline are complete foolishness in my opinion.
	24	I just want to make you aware that theres an
	25	organization that has some incredibly important publications

		54
PM1-54	I 1	about gas leaks and its the Conservation Law Foundation. I
(cont'd)	2	recommend you go there. They have a report about the leaks
	3	just to kind of raise your awareness of that aspect of the
	4	infrastructure that Boston has the second oldest in our gas
	5	pipeline piping infrastructure in the country after
	6	Baltimore, Maryland. So its about 150 years old most of the
	7	cast iron pipes under the city of Boston.
	8	Anyway, thats basically what I got to say. My
PM1-55	9	last comment is I although, Im not particularly computer
	10	savvy, I found that on the FERC website the ability to make
	11	a comment is extremely difficult. I don't know if somebody
	1.2	is able to kind of simplify it for the layperson. Thanks a
	13	lot.
	14	MS. LEE: Thanks you. Claire Miller?
	15	MS. MILLER: My name is Claire Miller,
	16	C-L-A-I-R-E M-I-L-L-E-R. Im a Massachusetts state director
	17	with Toxics Action Center. Were a statewide public health
	18	and environmental non-profit. We were founded after the
	19	cancer cluster in the 80s in Woburn. And our mission is to
	20	work side by side with communities that are working to clean
	21	up or prevent a pollution problem. So my job as a community
	22	organizer is to travel across the state to work with every
	23	day folks, concerned residents in neighborhoods who are
	24	concerned about a potential pollution problem in their
	25	neighborhood. And I will be submitting much more detailed

PM1-55 Comment noted. We understand some people have difficulty submitting comments electronically, so we accept letters as well as oral comments during comment meetings. See the response to comment FA6-5.

```
comments via email on the EIS prior to the 29th.
                        So I primarily just want to say is as a
PM1-56
        3 community organizer, I can't help but think about the process
        4 tonight. And Im just really concerned about the timing. I
        5 want to echo Mayor Walshs comments. Tonight is the night
        6 before the primary and so by very definition some of the
        7 most active participants in our democracy are probably not
        8 here. So that both means, you know, volunteers, folks who
        9 are political who care about our democracy are probably
        10 going door to door.
                       And it also means our elected officials who by
            definition are active participants in our democracy also,
            you know, had a conflict and are probably not here. I was
        14 really glad to see that Mayor Walsh and city councilman were
        15 able to send folks and theres potentially more in the
        16 audience tonight but it just feels like its a really missed
       17 opportunity and potentially undermining the confidence of
            this process. So I would like to echo Mayor Walshs request
            for an additional hearing in Massachusetts. Thank you.
                        MS. LEE: Thank you. Next up is Chuck
            Delloiacono.
                       MR. DELLOTACONO: Good evening. Chuck
       23 Delloiacono, C-H-U-C-K D-E-L-L-O-I-A-C-O-N-O. Im a chair
       24 person for Dedhams Park and Recreation Commission and we
       25 have the gas line going through one of our fields. It
```

PM1-56 See the responses to comments FA6-5 and IND92-2.

brings some concern to the commission. The safety protocol 2 being taken for the streets and the residential areas but ${\tt I}$ 3 think the protocols need to be taken 300 percent stronger 4 for the children playing on the ball fields this gas line is going through. My understanding is as a commission if we vote down the federal government could say, well yes, its needed. So we do projects all the time and on this condition list. 9 I would like conditions added that there are much stronger 10 safety protocols taken on the field than are being taken on 11 the street. The street can encapsulate a gas line. The soccer field cannot. I don't know if you recall the accident that happened back in 1995 in North Atteboro at the Walmart? I was there. Five feet of earth did not protect the two landscapers when 100 psi gas pressure tore through the line 17 and ripped the skin off their bodies. So five feet of dirt 18 cant protect children on the soccer field. Especially one 19 gentleman brought up this evening 300 feet radial theres an explosion radius. Every child in the field is going to get 21 hit with something if anything in that gas line erupts on 22 the ball field. Every child. Every participant on that 23 soccer field is in danger. So whatever the safety protocols that are taken on the street, 300 times the children. Its 25 not a vehicle. Its not a home. You know, theres no --

PM1-57 See the response to comment FA6-3. Mainline valves would not be installed on Gonzales Field. While mainline valves have the capability to vent gas to the atmosphere, this would happen only during line blowdowns, which would happen very seldom and with precautions as described in the response to comment SA4-3.

```
theres no concrete protecting the children. They have a
(cont'd)
        2 thin layer of skin. Something needs to be done.
                       Check valves. And the same as check valves need
        4 to be installed. We can't have check valves on the ball
        5 field where there are children playing. Its still gas fumes
        6 in venting. Each of these check valves has venting valves.
           It needs to be a condition. It cant be near the ball
           fields. These children are breathing. Adults, children,
        9 everybody. Theyre breathing the air. It can't be anywhere
           near the ball field.
                       And what kind of a notification are we as
           residents of the town or somebody participating using one of
       13 these fields for sports what if something happens on this
           gas line in Westwood thats three miles away or was Roxbury
       15 two more miles up the road? How do we know? Is there some
       16 kind of a horn system? Like I know we have a fire Dedham
       17 and they need more firefighters to show up. We need to go
       18 to mutual aid the horn goes off. Theres a certain sound
       19 that goes off and you count, you know, the numbers and it
       20 does what call box. Are we going to have this kind of
       21 system? At least at the ball field? If theres a -- if
       22 theres a gas break or an explosion further down the line?
                       Now, I mentioned the North Atteboro break. I
       24 was there when it happened. Forty-five minutes it took
           them. It was not an explosion. It was just the pressure of
```

gas coming up but it took 45 minutes to get the gas to 2 subside. I think it needs to take them a lot less time than Im here tonight 100 percent for the safety of 5 the children. I rather use wood in my backyard to cook my 6 dinner if I had to if I have to take the safety of children first. Thats not going to happen and thats not going to happen on that ball field. Thank you for your time. MS. LEE: Thank you. Robert Corley? MR. CORLEY: Good evening. Robert Corley, 11 C-O-R-L-E-Y. Im a resident of West Roxbury and I come tonight as an owner of property about a thousand feet from the meter station to be located on the corner of Center and Grove Streets in West Roxbury. PM1-58 Im against the meter station and the pipeline 16 project and particular the meter station. Last week there 17 was a neighborhood meeting in West Roxbury that Spectra hosted that I attended. It seemed more like somewhat of a 19 checking of the box than a neighborhood process. I volunteer in West Roxbury on a zoning 21 committee. In West Roxbury, were very thorough with each 22 other when we want to do additions to our properties or 23 build new homes and at this neighborhood meeting that 24 Spectra hosted, there was a lot of billboards like out front 25 here -- but there was nothing -- there was no specific

PM1-58 See the responses to comments FA4-1 and FA6-5. Section 4.8.7.2 of the EIS has been revised to include a recommendation that Algonquin provide a landscaping plan for the West Roxbury M&R station prior to construction.

1 rendering of what this meter station would actually look PM1-58 2 like to be located on the corner. There was pictures of 3 other meter stations that werent exactly right or not 4 exactly the same, but no elevations, no renderings, no 5 nothing was presented at that meeting and what this would 6 look like. There were a lot of people working there which was nice. And one of the gentleman I was speaking to was 9 one of the environmental people that has worked with Spectra 10 for 20 years or so. His name, I dont remember. But he 11 spent some good time with me. He answered a lot of my questions which was helpful. But I asked him a simple question. I said when this type of project gets to this level, this neighborhood meeting level, how many times have 15 you seen anything changed after that meeting? He said, 16 never. So I felt more like this is something thats 17 happening to us and not something that was actually part of a neighborhood process. So Im here tonight to request that there be some 20 more of a formal neighborhood process or a real neighborhood 21 process in which there is actual renderings and what this 22 meter station would look like. What it does exactly and 23 have it be presented to us. Not for us to sort of figure it 24 out and ask questions. For it to actually be presented and 25 then we ask questions afterwards which is what we hold

		60
PM1-58	I 1	ourselves to on a much smaller level and less important
(cont'd)	2	things than this meter station.
	3	Secondly, the meter station itself, what I
PM1-59	4	figured out from talking to them was that it is where the
	5	pipe transitions from a 16 inch diameter to a 24 inch
	6	diameter. And one of the questions, I posed was why does
	7	that have to happen at this location which is a very
	9	residential spot along the pipeline. Couldnt it happen
	9	maybe further down the line? Up Washington Street or in a
PM1-60	I 10	more commercial area because the meter station itself has
	11	noise impact which is one of the parts of the environmental
	1.2	study. And especially at nighttime, it has a noise impact
	13	24 hours. Its not just during the day or during work hours.
	14	
PM1-61	15	So I think the answer to that was that its
	16	where that transition point has to happen there thats the
	17	first place that they could find to put this transition
	18	station because its actually a connection connecting to a
	19	pipe down on further down on Center Street in West
	20	Roxbury. And if you follow that line all the way back up,
	21	this was really the first open space of land that they could
	22	grab to put this station. And again, thats not really the
	23	proper way to look at doing this find the the cheapest
	24	urban wild that you can find along the pipeline. It should
	25	have been more about whats the best place for the

PM1-59 See the response to comment LA24-3.

PM1-60 Section 4.11.2.3 and table 4.11.2.6 of the EIS present information regarding noise associated with M&R stations.

See the response to comment LA24-3.

PM1-61

61 neighborhood to have this if it has to happen. And that PM1-61 2 didnt happen and they already own the land. So there goes 3 to show you again. And lastly, as a property owner not PM1-62 5 understanding what this is going to look like and what kind 6 of a visual impact its going to have is a big concern. The 7 meter station itself from the little research I did on it, 8 it does make noise and there are high quality meter stations 9 that have high insulation and silencers on them that make them a lot more quiet. From what I was told this is sort of 11 the medium grade meter station. So not the Cadillac but maybe something towards the -- the mid-range. And again, having the neighborhood process to discuss that and maybe request something thats far superior than what was presented would be great. So thank you for your time. MS. LEE: Thank you. Next up is Bill McGregor. MR. CMALLEY: Hi. Good evening. Mr. McGregor works with me at city hall. He was going to read a statement on my behalf in case I missed the window to speak but since Im here with your indulgence, I was wondering if I could go ahead? Thank you. MS. LEE: State and spell your name for the 23 record. MR. CMALLEY: Certainly. Thank you. My name is 25 Matt OMalley, M-A-T-T O apostrophe M-A-L-L-E-Y. Im the

		62		
	1	Boston City Counselor representing District Six. Im joined		
	2	also by state representative, Ed Coppinger, who will speak		
	3	briefly as soon as Im finished.		
	4	District Six consists of the neighborhoods of		
	5	West Roxbury, Jamaica Plain and several smaller portions of		
PM1-63	6	several other neighborhoods. And I just wanted to thank you	PM1-63	See the response to comment FA6-5.
1111 05	7	for hosting this meeting tonight. I cannot and I will not		
	8	support this project until and unless there is a more		
	9	thorough, robust and transparent public process. We know		
	10	there have been a number of meetings really more so		
	11	information session over the last several years with the		
	12	exception of last Thursdays night meeting most were not well		
	13	attended. And I know my constituents, my neighbors and		
PM1-64	14	myself have many, many questions with both the pipeline and	PM1-64	Section 3.6.2.3 of the EIS discusses alternative locations for the West Roxbury
	15	the proposed house mere steps away from the West Roxbury		M&R station. Section 3.5.2 of the EIS discusses an alternative route for the
	16	Crush Stone, the quarry.		West Roxbury Lateral.
	17	We have many concerns about why that was sited		
	18	there. What the other options could be? As well as just		
	19	the sheer size of the pipes and the pressure the gas		
	20	pressure that could be in these pipes proposed up to 750 psi		
	21	I found out last Thursday night which seems extraordinarily		
	22	high particularly for such a thickly settled residential		
	23	area.		
PM1-65	24	So again, I urge you to have another hearing to	PM1-65	See the response to comment FA6-5.
	25	prefer to come back after Spectra and the Algonquin	1 1111 03	see the response to comment 17to 3.

		63
M1-65	1	Corporation are able to have another real robust information
cont'd)	2	meeting with neighbors, with constituents so that these
	3	questions can be answered. It is a huge project with many,
	4	many concerns and many, many questions that have not been
	5	answered. So on behalf of the 72,000 constituents that live
	6	in District Six as well as our neighbors in Dedham. Weve
	7	heard from many of them tonight and one of the great things
	8	about particularly West Roxbury and Dodham theres a lot of
	9	overlap. And we all share these concerns no matter where
	10	the pipe runs through or where it ends up. We want to have
	11	these questions answered before we can proceed so thank you
	1.2	for that opportunity. And I would like to ask State
	13	Representative Ed Coppinger to briefly follow me. Thank
	14	you.
	15	MR. COPPINGER: Good evening. My name is Ed
	16	Coppinger, C-O-P-P-I-N-G-E-R. I am a state representative
	17	from West Roxbury. A little bit of Rosendale, a little bit
	18	of South Brookline as well. I am one of those candidates
	19	whos on the ballet tonight so I appreciate you taking out of
	20	turn. And I know that there would be many more people here
	21	from our area but theyre working on statewide campaigns as
	22	well as Senator Mike Roush who shares our trepidation here.
	23	
PM1-66	24	And I just want to echo the concerns of more of
W11-00	25	a community process. The meeting last Thursday, people

PM1-66 See the response to comment FA6-5.

PM1-66 (cont'd)	1	found out either the night before on a blog or the day of
	2	because the emails went flying around and if those emails
	3	didnt go flying around that morning by many people in this
	4	room, ten people may have attended, five of which may have
	5	been working there.
M1-67	6	So I think where youre putting a gas meter
	7	station in such a residential area across from an active
	9	quarry whose intentions right now and they have a court
	9	order that allow them to do that is to blast on the
	10	outskirts of a property. And who sold this piece of
	11	property to Spectra Energy raises many, many concerns. And
PM1-68	1.2	I don't think theres been enough due diligence or enough due
	13	process to educate the community. I think that people that
	14	have come up here and expressed opinions and seem like they
	15	have a lot of information, they had to go and get it on
	16	their own. I think the representative from Spectra Energy
	17	came and they spoke to the electives but they didnt speak to
	18	the community.
	19	And when they came to speak with us, I think we
	20	got a false sense that they were doing the same in the
	21	community. But we received phone calls from people who live
	22	50 yards, 100 yards and as Rob Corley spoke earlier, 1,000
	23	yards from the property and they got no notification of a
	24	public meeting talking about a gas meter station thats going
	25	right next store to them. I mean that something has to

PM1-67 We are not aware from whom Algonquin purchased the site of the proposed M&R station, but that information does not appear relevant to our impact analysis. See also the response to comment FA6-1.

PM1-68 See the response to comment FA6-5.

PM1-68 (cont'd)	1	be done about that. As Rob Corley stated theres a theres
	2	a robust community process in the City of Austin and West
	3	Roxbury if you want to do an addition. If you want to do a
	4	deck on your house but not for a gas meter station that has
	5	so much volatility that surrounds it and just the thought
	6	process. And I think people hear gas, people get afraid.
	7	Maybe with education, they wont be but its
	9	something that has to be done. I think education is the key
	9	here and there has to be more of a community process. So I
	10	ask Spectra to do a second meeting and I join with Madam
	11	Malley, Mike Rush, Congressman Steven Lynch, Marty Walsh,
	12	the major. I know Counselor Mu, I mean theres so many people
	13	here tonight who represent the City of Boston and we just
	14	ask that we do that FERC. Thank you for this meeting and I
	15	dont want to waste anybodys time but we need to have another
	16	meeting. We need to have another meeting within the
	17	community as well. Thank you.
	18	MS. LEE: Next up is William Golden.
	19	MR. GOLDEN: Hello. My name is William Golden,
	20	W-I-L-I-A-M, Golden, G-O-L-D-E-N. I would like to thank
	21	you members of the FERC for allowing us to speak tonight on
	22	this project.
	23	I would like to be specific because Im new to
	24	the project myself. And I would like to refer you to figure
	25	3.5.2-1 on page 3-23. And I refer to that today because its

		66
	1	the only picture in the entire 800 page Draft EIS that gives
	2	you an idea of what the where the pipeline is going to
	3	go. And in the legend, its got the proposed route. Its got
	4	an alternative route through West Roxbury in this particular
	5	figure and it also has in the legend here. It has a a
	6	gray line for the Algonquin natural gas pipeline.
PM1-69	7	Well, I looked all over this figure and I cant
	8	find a gray line. So guess what? There is no existing
	9	Algonquin pipeline in this particular map. So Im led to
	10	draw the conclusion that the 5.1 miles of new pipeline will
	11	be along one of these two routes. So I just wanted to make
	1.2	sure Im correct in that and I appreciate if the FERC can
	13	make sure that Im reading this correctly. But this is new
	14	pipeline. Its not existing pipeline thats going to be
	15	replaced. I know these routes very well. Id like to run
	16	them. Theyve got beautiful houses along them and great
	17	neighborhoods and very safe places to exercise.
	18	The second item, Id like to draw attention to is
PM1-70	19	on page 322 thats one page before the map. And it makes a
	20	detailed analysis that this project made is how theyre going
	21	to choose which route they want to go. And if I just may
	22	quote them. It says, F shown in the figure and table, the
	23	alternative route, is about .1 mile longer but will require
	24	.5 miles less construction within the roadways and cross
	25	five fewer roads. The alternative route would pass within

PM1-69 The commentor is correct in that this segment of the Project would be new pipeline, not a replacement of an existing line. The proposed route for the West Roxbury Lateral is identified in the legend of figure 3.5.2-1 of the EIS as "Project Line" in yellow.

PM1-70 Your concern about the proximity of the pipeline to residences is noted. The FERC considers to closeness of residences as a factor in its alternative analysis along with other factors. See section 4.12.1 of the EIS for a discussion of the safety measures required in more densely populated areas and section 4.12.2 of the EIS for a discussion of pipeline safety data and incidents.

		67
PM1-70	1	50 to 100 feet of fewer residents than the proposed route
(cont'd)	2	but more the alternative route would pass through
	3	residential neighborhoods. Both routes would avoid wetlands
	4	and cross the same number of water bodies.
	5	So the analysis basically is to go with the
	6	proposed route because it interferes with your residences.
	7	And I think thats an inferior analysis because these are
	8	these are this interstate pipeline is a very large
	9	project and its its not right to bring it into a
	10	residential community where there are children, theres
	11	families and runners like me. Where there might be some
PM1-71	1.2	particular problem. And I dont think our neighborhood needs
PM1=/1	13	another big dick project which is going have probably
	14	costing a huge amount of money and will leave many overruns
	15	and will not benefit the company or the residences that they
	16	will be impacting. Thank you very much.
	17	MS. LEE: Thank you. Frederick Martin?
	18	MR. MARTIN: My name is Frederick Martin.
	19	Frederick, F-R-E-D-E-R-I-C-K M-A-R-T-I-N. And I live in
	20	Dedham and have lived here almost 70 years. For the benefit
	21	of the audience, I would like to mention the website
	22	sape2016.org which is against the AIM pipeline and they are
	23	concerned primarily with the 42 inch pipeline crossing the
	24	Hudson River quite close to the nuclear reactor there with
	25	this spent fuel.

PM1-71 Comment noted.

I would like see throughout the EIS how far the is from the pipeline. Apparently, the pipeline is of feet from the facility. And also if anybody wants the re you know, the number is docket number CB14-96, gov. I too am worried about the blasting in West ary. I think the EIS should have some discussion of the set of the burial of the pipeline. The heavy trucks ring material through the streets of Dedham impact the ine. The pipelines that Ive had anything to deal with hown seven feet rather than three feet. And I would like to see in the EIS some question stance between shutoff valves. Its been mentioned a

3.
r

PM1-72 See the responses to comments FA4-24 and FA6-1.

PM1-73 With respect to the impact that soil vibration from trucks at pipeline road crossings, there are tens of thousands of such pipeline road crossings in the United States; neither the FERC nor the PHMSA consider this to be a significant safety concern, with standard design and construction practices. See also the response to comment FA6-1.

PM1-74 Section 4.12.1 of the EIS discusses the required maximum distance between block valves on the pipeline, which is a function of class location.

		69
PM1-75	1	I personally would would think that the
	2	pipeline should not be built. If there are no alternative
	3	option should be adopted or recommended as a with the
	4	EIS. And I think its too unsafe that the absolute
	5	comparison there are almost as many houses here in Dedham as
	6	there are in the entire pipeline anywhere else. Thats a
	7	telling comparison.
PM1-76	8	And the question of regulation after the
	9	explosion in San Francisco and the federal government
	10	doubled the number of people in the inspection but it still
	11	isnt enough. And as these pipeline wear out and the wells
	1.2	go bad in 30 or 40 years and then is the time when the
	13	inspection is needed. Who knows whether will inspect it at
	14	the time.
	15	So I think thats all I got to say. Thank you.
	16	MS. LEE: Thank you. Next up is Cathy Buckley.
	17	MS. BUCKLEY: Hi. My name is Cathy Buckley,
PM1-77	18	C-A-T-H-Y B-U-C-K-L-E-Y. I live in Westwood and I grew up
	19	in Dedham. This Wednesday as being the anniversary of my
	20	fathers death. He was born in 1921 when carbon dioxide
	21	readings were 303. He died in 1966 when carbon dioxide
	22	readings were 321. They are now well, last years annual
	23	average of 396. So the 45 years that he was here on this
	24	planet, CO2 went up 18 parts per million. The 48 years
	25	since he has left, they have gone up $75\ \mathrm{parts}$ per million.

PM1-75 Comment noted. The no action alternative is evaluated in section 3.1 of the EIS. See also the response to comment IND248-8.

PM1-76 Section 4.12.1 of the EIS discusses federal safety standards for natural gas pipelines and how these standards are applied in HCAs. Section 4.12.3 of the EIS discusses safety-related concerns and other specific measures that Algonquin has proposed or that we are recommending to further address public safety concerns.

PM1-77 Section 4.13.7 of the EIS presents a cumulative impact analysis of GHG emissions from the Project. See the response to comment CO7-3 for additional information regarding methane global warming potential.

		70
PM1-77	I 1	More than four times as much. This is an emergency. She
(cont'd)	2	said calmly.
	3	Methane although its 20 times worse than carbon
	4	dioxide in the first 20 years its 80 times worse. And we do
	5	not have 20 years.
	6	This morning I attended the Lobster Boat trial
	7	at Falls River Courthouse. Two men who blocked a barge
	8	delivery of coal at the Brighton Power Plant in Summerset,
	9	Mass were on trial. The Bristol County District Attorney
	10	threw out the criminal charges they faced. And then made a
	11	statement to this effect.
	1.2	Climate change is a crisis and government is not
	13	responding. This is a district attorney, county district
	14	attorney. These two men are taking the kind of action we
	15	need. And he added, I will see you in New York on September
	16	21st.
	17	Now, I urge all of you behind me and I cant turn
	18	around because I got to stick with the microphone. I urge
	19	all of you to be in New York on September 21st. For the
	20	Peoples Climate Rally because we need to come together and
	21	show our government that we, the people, will not stand by
	22	and watch the further degradation of mother earth. Thank
	23	you.
	24	MS. LEE: Thank you. And the last person we
	25	have signed up to speak tonight so far is Bill Kavaleski.

		71
	1	MR. KAVALESKI: My name is Sill Kavaleski. Bill,
	2	B-I-L-L, Kavaleski, K-A-V-A-L-E-S-K-I. I live in the grove
	3	section of West Roxbury. That section is bordered by
	4	Washington Street, Grove Street, Center Street, Stimson
PM1-78	1 5	Street. Its the section where the meter take station is
FM1-78	6	procesed. A lot if not most of those homes are within the
	7	radius of impact within a 300 foot radius. It would be the
	9	back side of that.
	9	I would like FERC, Spectra, Algonquin and maybe
PM1-79	1 10	even National Grid to tell the neighborhood and the people
FM11-79	11	what would happen with the with the discharge of 750 psi
	12	before it gets to the metering station. Im under the
	13	impression that that from Westwood to the meter take station
	14	at the quarry will be 750 psi. From the take station to
	15	Center Street where National Grid is going to take over
	16	thats a 24 inch line and thats 100 psi. Theres much too
	17	much pressure coming in there for a neighborhood. I believe
	18	my neighborhood, the Grove, would be decimated. Not only
	19	because of the fire ball thats referred to in that 340 area
	20	but the impact, the explosion would make such a crater, it
	21	would create another quarry right across the street.
	22	My home and most if not all the homes in the
	23	quarry are built on ledge. So certainly any kind of
	24	explosion or disruption like that and most of the homes
	25	if they wouldn't eviscerate with the fire ball, they would

PM1-78 Comment noted.

PM1-79 Section 4.12.1 of the EIS discusses federal safety standards for natural gas pipelines and how these standards are applied in HCAs. Section 4.12.3 of the EIS discusses safety-related concerns and other specific measures that Algonquin has proposed or that we are recommending to further address public safety concerns.

```
certain crumble with the explosion, the shaking that would
 2 go on there. I think its a very poor site to be placed.
 3 The siting is very poor.
                You have it right on Grove Street. The corner
 5 of Grove and Center. The -- the road on Grove Street
 6 inclines as you go up Washington -- towards Washington
 7 Street it declines from Washington to Center. So there is a
    grade there. You have trucks coming in and out of the
 9 quarry all day long with many tons of loads of stone on
 10 them. If any one of those trucks were to let go. Say for
11 instance somebody getting a heart attack behind the wheel
 12 going to the quarry and lose control of that truck, it would
13 barrel into that proposed meter take station.
                That area has a 15 -- approximately a 15 foot
15 drop from the Grove -- from Grove Street -- from the Grove
    Street to the bottom of that pit there. And I don't know if
17 anybody aware of that but I think it would be extremely
18 dangerous to have any of those transport vehicles go roaring
    down the street on a winters day, slip and slide or go out
20 of control and barrel head on into the meter station.
                Another aspect is its unsafe because theres a
22 curve in the road there. Its unsafe. We have a death on
23 that stretch of road approximately in 2005. The lady was in
24 her car. A plow -- a city plow from the city of Larson was
25 coming down the street. Neither one of them had control
```

PM1 – Public Meeting in Dedham, Massachusetts (cont'd)

		73
PM1-79 (cont'd)	1	because of the icy conditions. The plow ran into the person
(conta)	2	and the lady passed away. And thats right at the area where
	3	that offset of that 16 inch line would take a 90 degree turn
	4	and that will come into that metering station. Thats where
	5	that lady got killed right there. So its very unsafe in a
	6	lot of ways.
PM1-80	1 7	Another aspect to the quarry. Quarries have a
PWI1-80	9	certain life to them. This quarry doesn't have much longer
	9	to go. In the very near future, they wont be able to blast
	10	because they will extend beyond the life of the quarry.
	11	They, being the I believe its the Larusa family that own
	1.2	it. Propose filling the quarry with fill. And I don't know
	13	exactly where theyre going to get a fill to full it but it
	14	will be many, many, many years of trucks coming in and out
	15	of that quarry with fill. And thats just to fill the
	16	quarry. So again, the traffic of those vehicles with the
	17	fill would add the added risk of one of those transport
	18	vehicles letting go and going into the take station. So
	19	thats another aspect of why I feel its unsafe.
	20	Right now, the blasting goes on two to three
	21	times a week as people have said have said here. Shakes my
	22	house every time as well as everybody else in the Grove. I
	23	cant imagine if a pipeline let go with 750 psi, you know,
	24	what that would be. But it would be kind of just
	25	devastation. And I just would like to make an added note

PM1-80 See the responses to comments FA6-1 and SA13-9.

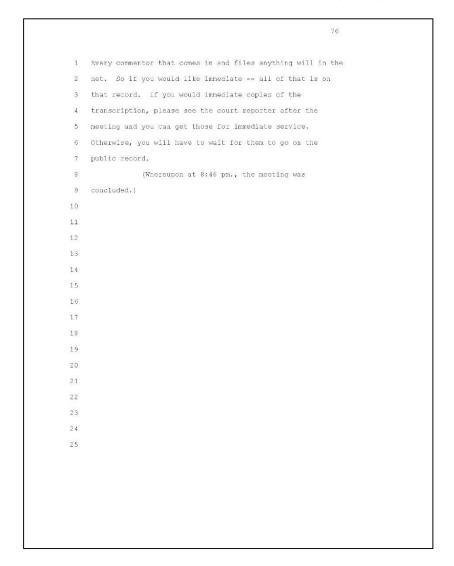

PM1 – Public Meeting in Dedham, Massachusetts (cont'd)

		74		
PM1-81	1	that the San Bruno incident that happened, Im under the	PM1-81	The PIR is a function of line pressure and pipe diameter. See table 4.12.3-1 of
	2	understanding, you can correct me if Im wrong. The psi in		the EIS for the PIRs along the various segments of the proposed Project.
	3	that pipe was 450 psi. So you have almost twice the psi		
	4	coming into this metering station. So wouldnt it be twice		
	5	the devastation of a San Bruno. That's how my math works.		
PM1-82	6	Let me see if I can add any more to this. I	PM1-82	See the response to comment FA6-5.
	7	would also like another meeting because the process was very		1
	9	poor as far as getting out the information. I echo		
	9	everybody elses concern up here in that regard.		
	10	I would also like to see at this meeting the		
	11	upcoming meeting if you will have the Spectra and Natural		
	12	Grid representatives get together. Because any time Ive		
	13	questioned one or the other, they don't know about the others		
	14	project surprisingly enough.		
	15	I would like a representative from Spectra and		
	16	beside him a representative from National Grid and let the		
	17	audience know and the neighbors know and the elected		
	18	officials know how one is going to interact with the other.		
	19	What the process is? What the contract is maybe between the		
	20	two of them? You know, Spectra and National Grid. Maybe		
	21	even the contract between the Laruso family and Spectra on		
	22	the sale of this parcel of land and why it was chosen for		
	23	the metering stations.		
PM1-83	24	A lot of times these metering stations are	D) (1 02	0.1
	25	located I hesitate to use the word remote. But theyre in	PM1-83	See the response to comment SA4-5.

PM1 – Public Meeting in Dedham, Massachusetts (cont'd)

		75
PM1-83] 1	remote areas. Theyre not in settled residential areas like
(cont'd)	2	this one is proposed. Theyre in industrial parks like at
	3	the end of the park where if something goes wrong, theres a
	4	thousand foot buffer of parking space there. This here,
	5	youre plopping down right in the middle of a neighborhood.
	6	I have even mentioned my other neighbors in the other
	7	sections of West Roxbury that border the Grove and theyll be
	8	severely and heavily impacted also. So thank you a lot for
	9	letting me speak tonight.
	10	MS. LEE: Okay. With that being the last
	11	speaker who is signed up to speak this evening. Im just
	12	going to remind everyone that there were some sheets out
	13	there where you could submit some written comment if you
	14	wanted to. Anybody here who has one of these lovely badges
	15	can take your comments and we will put them on the record
	16	for you if you wish. Otherwise, there are instructions on
	17	those sheets on how to mail them in if you wish to do so.
	18	With that, the formal part of the meeting is going closed.
	19	But I will remind everyone that the FERC website,
	20	www.ferc.gov. There is a link called elibrary. You can
	21	type in the docket number CP14-96 and you can use elibrary
	22	to gain access to everything on the record concerning this
	23	project as long as all of the filings and information
	24	submitted Algonquin. Everything that FERC has issued on
	25	this project. Anything that any agency has submitted.

PROCEEDINGS MS. SUTER: Good evening. On behalf of the 3 Federal Energy Regulatory Commission or FERC, I want to 4 welcome you all here this evening for the public comment meeting on the Draft Environmental Impact Statement or Draft EIS for the Algonquin Incremental Market Project or AIM Project. Let the record show that the DEIS comment meeting began at 6:34 p.m. on September 9th in Norwich, Connecticut. My name is Maggie Suter and Im the environmental project manager with the FERC for the AIM Project. Also with me here at the front table is Karen Gentile with the Department of Transportation Pipeline and Hazardous Material Safety Administration and Jennifer Lee who is with a consulting firm helping FERC prepare the EIS document. 15 Also here this evening at the sign in table are Amanda Martiney who is with FERC and are Andrea Thornton 17 and Larry Brown who are also with our consulting firm. The U.S. Army Corps of Engineer Environmental Protection Agency and the U.S. Department of Transportation Pipeline and Hazardous Materials Safety Administration are participating as cooperating agencies in the preparation of the EIS. I 22 would like to thank them for their cooperation and their 23 continued assistance in the EIS review process. Corey Rose 24 from the U.S. Army Corps of Engineers is here this evening. 25 If you have any questions about their permitting process or

1 role, please feel free to come up and talk to her after this meeting concludes. Im going to briefly turn things over to Karen who 4 is going to go over DOTs process and how it relates to the review of these projects and then I will go through FERCs process and where we are and how we move forward from here. MS. GENTILE: Good evening. As Maggie said, Im Karen Gentile and I am one of the community assistants and technical services managers for the Pipeline and Hazardous Materials Safety Administrations eastern region office located in New Jersey. Id like to thank FERC for the opportunity to provide an overview of PHMSAs Office of Pipeline Safety Program. Upon request from FERC, our office provides support on the National Environmental Policies Act, NEPA analysis. If Algonquin Gas Transmission receives permission from FERC for its Algonquin Incremental Market Project, PHMSAs Office of Pipeline Safety in cooperation with state partners will provide the regulations for the construction 21 and safe transportation of natural gas through the pipeline 22 to include compressor stations, metering facilities and 23 associated piping and will maintain regulatory oversight 24 over the safety of the pipeline facilities throughout its 25 operation. As an interstate agent working on behalf of

PHMSA, the Connecticut Public Utilities Regulatory Authority will perform inspections on the natural gas pipeline facilities in Connecticut as well as on Algonquins plans, procedures and records to insure that the designing construction are in compliance with Title 49, Code of Federal Regulations Part 192. The minimum federal safety standards for the transportation of natural gas by pipeline. This oversight includes inspections to insure that suitable materials are used in construction, welding is performed in accordance with industry standards by qualified welders, the pipeline is installed to proper depths. Its protected from coercion, contains pressure limiting devices and is properly tested before its use. Beyond the construction process, the Connecticut Public Utilities Regulatory Authority conducts periodic inspections of the operation and maintenance requirements in Title 49 CFR Part 192. The operator must establish comprehensive written procedures describing the types and frequencies of monitoring to insure the continued safe operation. The monitoring that an operator performs includes monitoring the operation and adequacy of external coercion prevention systems, inspecting and testing pressure release devices, inspecting and operating transmission line valves, patrolling the right away and surveying release. In addition to this routine monitoring PHMSAs

1 Pipeline Safety Regulations require gas transmission, pipeline operators to implement integrity management programs. These programs require a periodic assessments of natural gas transmission pipelines in highly populated These assessments provide a comprehensive understanding of the pipeline condition and associated risks. Inline inspection tools commonly referred to as Smart Pig provide detailed information about pipe condition. During integrity inspections sensors and computers are sent through the pipeline. These devices can indicate pipeline deformations and changes in wall thickness. By analyzing the data collected during inline inspections operators can locate and repair areas of the pipeline that may have been damaged or deteriorated. Integrity management programs require operators to detect and collect damage to their pipelines in highly populated areas before the damage results in leaks. 19 A well-constructed and maintained pipeline must 20 also be properly operated. Operators must insure that personnel performing operations, maintenance or emergency 22 response activities are qualified to perform these 23 functions. This is to minimize operator error. Operators 24 must implement training and testing programs for employees 25 and contractors whose performance is crucial to maintaining

the safety of the pipeline and pipelines facilities. Pipeline operators must also implement public awareness programs to improve awareness of pipelines within communities. Operators communicate pipeline safety information to local public officials, the public along the pipeline right away, emergency responders and excavators. The public awareness programs emphasize the importance of calling 811 prior to excavating. A call to 811 provides notification to all participating utility owners including pipeline operators to mark the location of their facilities prior to excavation and to monitor the excavation to help insure that the facilities are not 1.3 damaged. The public awareness programs also include information on how to recognize pipeline emergencies, how to respond appropriately and how to report a potential emergency to aid in the rapid response by both the pipeline operator and community emergency responders. 19 In addition to public awareness programs, 20 pipeline operators are required to have written emergency plans in place prior to operation of their facilities. These program require operators to establish and maintain liaison with fire, police and other public officials among other things to acquaint the officials and the operator with their respective responsibilities and resources in planning

	7
1	for and responding to emergencies.
2	These emergency plans must at a minimum provide
3	for establishing and maintaining communication, prompt and
4	effective response and availability of personnel, equipment,
5	tools and materials as needed at the scene of an emergency.
6	These plans help the operator and the emergency responders
7	know their roles and responsibilities and available
8	resources prior to the need to respond to an incident.
9	If safety inspections find inadequate procedures
10	or that an operator is not following their procedure, then
11	PHMSA is authorized to require remedial actions, assess
12	civil penalties and initiate criminal action if necessary.
13	PHMSA has reviewed the Draft Environmental Impact
1.4	Statement as it relates to pipeline safety. This document
15	specifies that Algonquin will construct, operate and
16	maintain the proposed pipeline to meet or exceed the minimum
17	Federal Safety Standards in Title 49, Code of Federal
18	Regulation Part 192 for the transportation of natural gas by
19	pipelines.
20	Safety has been FERCs primary mission and we
21	understand how important this mission is to your community.
22	Again, thank you for the opportunity to provide an overview
23	of PHMSAs pipeline safety program.
24	MS. SUTER: Thank you, Karen. For those of you
25	who have not been at any of the previous meetings or know

much about FERC, Im going to give you a very brief overview. FERC is an independent agency that regulates the rates for the interstate transmission of electricity, 4 natural gas and oil and the siting of interstate natural gas and hydroelectric facilities. FERC has up to five commissioners who are appointed by the President and with the advising consent of Senate. FERC is the lead federal agency for the National Environmental Policy Act of 1969 or the NEPA review of the AIM project and the lead agency for preparation of the EIS. MEPA requires FERC to analyze the environmental impacts, consider alternatives and appropriate mitigation measures on proposed projects. In February of 2014, Algonquin Gas Transmission filed an application under section 7 of the Natural Gas Act. The project would consist of the replacement of 26.3 miles of existing pipeline with 17 new larger diameter pipeline in the same location. The installation of 11.3 miles of new pipeline, the addition of compression at six existing compressor stations and the abandonment of compression at one of these compressor stations. And this is all spread out throughout New York, Connecticut, Rhode Island and Massachusetts. The primary purpose of this meeting tonight is 24 to give you the opportunity to provide specific 25 environmental comments on the Draft EIS prepared by FERCs

1 staff on the project. It will help us most if your comments are as specific as possible regarding the proposed project and the Draft EIS. I would again like to clarify that this is a project being proposed by Algonquin. It is not a project being proposed by the FERC. Rather the FERC is the federal agency responsible for evaluating applications to construct and operate interstate natural gas pipeline facilities and for evaluating natural gas facilities. 10 The FERC therefore is not an advocate for the 11 project. Instead, as mentioned throughout this process, the FERC is an advocate for the environmental review process. During our review of the project, we assembled information from a variety of sources including Algonquin, you the public, other state, local and federal agencies and our own independent analysis and field work. We analyzed this information and prepared a Draft EIS that was distributed for public comment. 19 A notice of availability of the Draft EIS was issued for this project on August 6, 2014. We are mearing 21 the end of the comment period of the Draft EIS. The comment 22 period ends on Monday, September 29, 2014. All comments 23 received, written or spoken, will be addressed in the final 24 EIS and are given equal consideration. I encourage you if 25 you plan to submit comments and have not, please do so here

1 this evening either verbally during the comment portion of our meeting or in writing using one of the forms that was at the sign in table that you passed coming in this evening. You may also submit comments using one of the 5 procedures outlined in the Notice of Availability which includes instructions on how to submit your comments electronically. There is also one pager at that sign in table that outlined all of those procedures for you. If you receive a copy of the Draft EIS, either 10 on paper or CD, you will automatically receive the final 11 EIS. If you did not get a copy of the draft then you are 12 not currently on our mailing list. I apologize. Our 13 mailing list is quite large and constantly undergoing revision. If you would like to get a copy of the final 15 please sign get -- please sign in at the attendants list and provide us your name and address and we will make sure you 17 get a copy of the final DEIS. Im going to emphasize that 18 our default is to issue documents on a CD. So if you would 19 prefer to receive a paper copy of the document, please make sure that you indicate that when you sign up at the table as 21 well. I would like to remind everyone that neither the 23 draft or final EIS are decision making job documents. In 24 other words, once they are issued, it does not determine 25 whether the project is approved or not. Im going to

11 1 differentiate between the roles of the two distinct FERC 2 groups, the commission and the FERC staff. The first staff present here tonight are part of the FERC environmental 4 staff and we will oversee the preparation of the final EIS for this project which is the next step in the environmental review. We do not determine whether or not to approve the After the final EIS is issued, the FERC commissioners those five presidentially appointed that ${\bf I}$ mentioned earlier, will make a determination on whether to issue a Certificate of Public Convenience and Necessity to Algonquin. The commission will consider the environmental information from the EIS, public comments as well as of a host of non-environmental issues information such as engineering, markets and rates in making its decision to approve or deny the applicants request for a certificate. 17 There is no review of FERCs decision by the 18 President or Congress. Thus, maintaining FERCs role as an independent regulatory agency and providing for fair and unbiased decisions. Only after taking the environmental and 21 non-environmental factors into consideration will the 22 commissioners make its decision whether or not to approve 23 the project. If the commission votes to approve the project 25 and Certificate of Public Convenience and Necessities is

12 1 issued Algonquin will still be required to meet the conditions outlined in that certificate before it could begin construction. If approved, FERC environmental staff would monitor the project through construction and restoration 6 performing inspections to document environmental compliance with Algonquins plans and mitigation measures and the additional conditions in the FERC certificate. We will now move onto the part of the meeting 10 where we will hear comments from the audience members who 11 have signed up to speak. If you would rather not speak tonight or dont get to say everything you wanted, you may hand in written comments using the comment form found at the table in the back of the room or you send them to the secretary of the commission by following the procedures outlined. Either way, your comments will be considered with 17 equal weight. As you may have noticed, this meeting is being recorded by a court reporter so all of your comments will be 20 transcribed and put into the public record. Therefore, I 21 have a few ground rules to be followed this evening. All 22 speakers must come up to the podium and speak into the 23 microphone. You cannot yell a question or a comment out 24 from your chairs or from the audience because it cannot be 25 accurately transcribed and recorded by the microphone. So

1 even if you just have a question, you have to come up to the 2 microphone. I ask that each speaker when you come to the 4 microphone first identify yourself and please spell your name for the record. Also, my number one rule, please show 6 respect for everyone who is speaking. Were now ready to call our first speaker. MS. SUTER: And that is Scott Gustafson. MR. GUSTAFSON: Good evening. My name is Scott 10 Gustafson. Its Scott, S-C-O-T-T, Gustafson, | 11 G-U-S-T-A-F-S-O-N. Thank you for the opportunity to speak 12 here tonight and for the meeting. I came here tonight 13 because I -- I support the project and the comment on the Environmental Impact Statement. Im a representative of the Laborers International 16 Union of North America represent thousands of construction 17 workers here in the New England region. My title is 18 regional organizing director. We have been following this project for some time 20 as we do all natural gas projects in the region for the 21 opportunities for our members to go to work and construction 22 members to go to work on good paying and family providing As far as the Environmental Impact Statement 25 goes, we have a training facility not far from here in

PM2-1 Comment noted.

		14
PM2-1	1	Stamford, Connecticut where we train thousands of
cont'd)	2	construction workers every single year in pipeline
	3	construction. As you spoke about the operator
	4	qualifications in your opening, we train in all of those
	5	different aspects and tasks of operating qualifications.
	6	Also the pipeline safety is the number one course that we
	7	teach.
	8	Its very important to state that were all were
	9	all trained especially in environmental mitigation issues
	10	dealing with pipeline construction. Its really important
	11	obviously to the general public, to homeowners, to the
	12	government agencies and to Spectra Energy that the land goes
	13	back the way it was or at least as closely as it was before
	14	the construction.
	15	So our members are all trained in that
	16	environmental mitigation. Taught all different forms of
	17	environmental mitigation throughout the process. Were here
	18	to support the project tonight. Theres thousands of members
	19	and construction workers looking for this opportunity to
	20	work on this project and other natural gases construction
	21	projects that are hopefully coming to New England. Thanks
	22	for the opportunity to speak tonight.
	23	MS. LEE: Thank you. The next speaker is
	24	Jennifer Siskind.
	25	MS. SISKIND: Hi. Jennifer Siskind,

		15
	1	J-E-N-N-I-F-E-R S-I-S-K-I-N-D. Im from Glastonbury,
	2	Connecticut.
	3	My town is going to be impacted from a M&R
	4	station thats going to be expanded and upgraded there. We
	5	were also very close to the compressor station in Cromwell.
PM2-2	1 6	Its already been well documented that people living as far
	7	as three miles from the compressor station are having their
	8	health impacted from the emissions from those stations.
	9	This EIS has only looked at sensitive
	1.0	populations, particularly public schools that are a half
	11	mile distance from the Cromwell station. Im not sure at the
	12	time that there are two daycare centers within a quarter
	1.3	mile of the Cromwell station. There also is a significant
	14	number of elementary schools, middle schools, junior high
	15	school and a high school within a three mile range. Some of
	16	them as close as a mile and a quarter from the compressor
	17	station in Cromwell.
PM2-3	18	This impacts schools in Rocky Hill and in
	19	Cromwell. I dont believe that this EIS has properly given
	20	air emissions its due and evaluation. Adding an additional
	21	81,624 horse power to this gas power line will significantly
	22	increase the emissions at these six compressor stations
	23	across the entire system. Nitrogen dioxide, sulphur
	2.4	dioxide, ground level ozone entailments as a result of
	25	reacting with these emissions in some way are going to be

PM2-2 See the responses to comments SA4-1 and SA4-9 for additional information regarding compressor station emissions and emission impact analyses.

PM2-3 See the responses to comments SA4-1 and SA4-9 for additional information regarding compressor station emissions and emission impact analyses. See also the response to comment SA4-4.

M2-3 contd)	1 2 3 4 5 6	dramatically increased and the chemical emissions including carcinogens of benzene, toluene, ethyl benzene and also any radioactive elements from radium 226 or 228 will carry through the pipeline with the gas. If theres any kind of emergency procedure,
	3 4 5	radioactive elements from radium 226 or 228 will carry through the pipeline with the gas. If theres any kind of emergency procedure,
PM2-4	4 5 6	through the pipeline with the gas. If theres any kind of emergency procedure,
PM2-4	5	If theres any kind of emergency procedure,
PM2-4	6	TO A STATE OF THE STATE OF STATE OF STATE OF THE STATE OF
	7	explosion, fire, local responders are not going to be well
		equipped to deal with both radiation and chemical
l,	Θ	contamination. That needs to be taken into consideration.
	9	The compressor in Oxford has been completely
PM2-5	10	eliminated from this application. I dont understand why
J	11	that is. In addition to looking at cumulative impacts, a
PM2-6	12	formal health impact assessment needs to be conducted and
	13	included in this EIS and right now it is missing.
	14	Additionally, we need to look at the accumulative
PM2-7	15	impacts environmentally not just what will happen on a
	16	construction level but also what will happen beyond the
3	17	construction. Both the back fill, the ground disturbance to
	18	install a pipeline is going to create a conduit of water to
	19	flow along the access of the pipeline and will be
3	20	detrimental to water systems, water sheds and ground water
I:	21	aquifers that will not be able to absorb water in the area.
PM2-8	22	I believe the application also fails to fully
	23	describe the scope of the AIM project of bringing over
1	24	300,000 decatherms of gas to the New England region.
I,	25	Case, for example, I live in Glastonbury. There

PM2-4	As discussed in section 4.12 .1 of the EIS, coordination with local emergency responders and coordination with local utilities is an integral part of Algonquin's pipeline safety program, and is a regulatory requirement. See also the response to comment LA1-9.
PM2-5	Algonquin proposes to simply recondition or "re-stage" an existing unit at the Oxford Compressor Station. No additional horsepower is proposed at the Oxford Compressor Station, as indicated in table 2.1.2-1 of the EIS.
PM2-6	See the response to comment SA4-10.
PM2-7	Section 4.13 of the EIS includes our evaluation of the potential cumulative impacts associated with the Project. Specific measures to minimize the impact of the Project on groundwater and drainage are described in sections 4.2.2 and 4.3.1.7 of the EIS.
PM2-8	See the response to comment FA3-5.

PM2-8 (cont'd)	1	have been engineers employed by Spectra Energy evaluating
	2	our gas line in Glastonbury all summer long. They are
	3	specifically looking to do a 10.4 mile 36 inch diameter loop
	4	which is the Cromwell discharge. This segment of pipeline
	5	future construction was not part of this application. Its
	6	going to be necessary if you expand the loop in Cromwell and
	7	add a 36 inch diameter pipe and add existing compressors in
	8	that area. They will have to upgrade the pipeline beyond
	9	Cromwell into Glastonbury and this information is completely
	1.0	lacking in this application.
	11	Additional pipeline expansion that will be needed
	12	beyond both what Spectra is proposing in its AIM Project and
	1.3	will in the future be proposing in its Atlantic Bridge
	14	Project and other projects need to be considered the
	15	comprehensive total impact of sending gas from the Hudson
	16	River up to Boston and not this piecemeal application
	17	process of only giving us a little bit of information about
	18	a little bit of the construction at a time.
	19	Additionally, Spectra Energy owns a significant
PM2-9	20	portion of the maritime in Northeast Pipeline that will go
	21	out to Canada and it is considered that a sizable amount of
	22	the gas that will move through this finished pipeline will
	23	ultimately be exported to Canada where there already exist a
	2.4	LeG export station ready to deliver gas to the European
	25	markets. So even though the AIM as being described as

PM2-9 See the responses to comments CO15-4 and PM1-32.

		18
PM2-9	1	something beneficial to the Connecticut, New York and
(cont'd)	2	Massachusetts region, the overall scope of this is going to
	3	result in exports of liquefied natural gas.
	4	In addition, the import stations that currently
	5	exist in Boston Harbor and outside of Gloucester,
	6	Massachusetts are sitting idle. Theyre no longer receiving
	7	any import natural gas because all the suppliers that used
	8	to bring natural gas to those stations are now delivering to
	9	markets that are more expensive in European countries.
	10	So its very likely that these existing import
	11	stations could be easily converted into expert stations
	12	simply by changing the direction of the flow of gas in the
	1.3	pipeline. And so this EIS completely glosses over the
	14	possibility of gas being exported and thats something that
	15	needs to be reconsidered.
	16	MS. LEE: Thank you very much. So thats
	17	everybody who signed up to speak but we certainly still have
	18	plenty of time so if theres anybody who would like to come
	19	up and speak, I invite you to do so. Come up. Just make
	20	sure you say your name and spell it.
	21	MR. WHITE: Thank you. My name is Dustin White,
	22	D-U-S-T-I-N W-H-I-T-E. Im here on behalf of the town of
	23	Montville. Im a chairman of the Economic Building
	24	Commission as well as a commission on The Inland Commission
	25	in the town of Montville.

		19
PM2-10	1 1	So the economic impact as well as the health
	2	impacts is definitely something that the town of Montville
	3	is looking at as far as our expansions to the 12-inch pipe.
	4	As well as the economic impact so if you havent been in the
	5	loop as far as the downward trend in coal power, natural gas
	6	is coming up, were trying to get that in at the AES Thames
	7	coal plant which is currently being demolished.
	8	Its also right on the Thames River to go along
	9	with the export there are projects looking at that which $\boldsymbol{\mathrm{I}}$
	10	don't know if FERC has been in the loop on that, but theres
	11	plenty of proposals out there looking at doing a natural gas
	12	liquefaction terminal as well as peak shaving to feed right
	13	into Montville NRG, Im sorry, NRG Montville. As well as
	14	possible outbound shipping, as well as training. All those
	15	facilities are in Montville. And Montville is pro-expansion
	16	right now. So as far as finding red tape in the town of
	17	Montville you will not find it.
	18	We are concerned as far as economic impact in the
	19	wetlands where were kind of tied when it comes to the Army
	20	Corps of Engineers and Federal and State regulations. As a
	21	town, we don't have a lot of stopping power, but we do have
PM2-11	22	comments and input. So. with that said, we would like to see
	23	more of the EIS expansion into what would be the effects of
	24	a 12-inch pipe thats supposed to go in for a lateral loop.
	25	And then looking more term is how often we will

PM2-10 Economic impacts associated with the Project are discussed in section 4.9 of the FIS

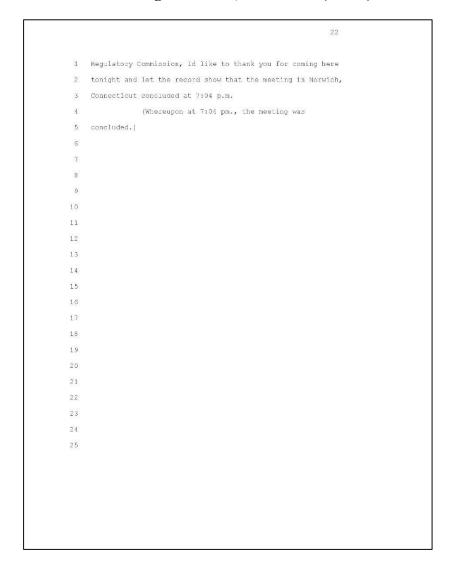

PM2-11 Impacts associated with the 12-inch-diameter E-1 System Lateral Loop Extension in Montville are discussed throughout the EIS.

		20
PM2-12	I 1	have to revisit this to ramp it up. It does seem very
	2	piecemeal where were dealing just very small sections at a
	3	time where we put this thing in to meet the current demand
	4	but if a natural gas purification, output terminal, export
	5	terminal goes in, you know, are we going to be revisiting
	6	this issue in five to ten years? So it doesn't seem like
	7	theres a lot of forward thinking as far as what our future
	8	demand is. And previous speakers are absolutely correct.
	9	We are turning into an export country of natural gas. So
	10	with a deep water port in this state, only a few, being in
	11	London just down the river from the current AES Thames
	12	plant. FERC would really be doing themselves a favor by
	1.3	looking at that and start looking at a feasability study in
	1.4	the town of Montville for more natural gas. If the
	15	compression stations are meeting resistance in other towns,
	16	feel free to look at Montville. We will bend over backwards
	17	to try to make things work for you guys.
PM2-13	18	Besides that the 342,000 decatherm is pretty
	19	broad. How much we really dont know how much of that is
	20	geared towards expansion in our area. We just know the pipe
	21	is going up. So we dont know whether youve factored in
	22	5,000 decatherms, 20,000 decatherms for our area, it would
	23	be good to see for the economic impact as far as what we can
	2.4	support for future businesses as far as a selling point. So
	25	town Montville can say, hey, we got this expansion going in

PM2-12 Comment noted. It is the role of the private sector, not FERC, to assess markets and to translate market needs and other considerations into specific project proposals.

PM2-13 Section 1.1 of the EIS lists the shippers for the AIM Project. Each shipper has determined the need for additional gas supplies to meet the projected demand in its service area. Figure 3.4-1 of the EIS identifies the volume of gas to be delivered throughout the Project area.

		21
PM2-13	1	support of additional 20,000 decatherms for new business,
(cont'd)	2	new economic growth. So thats all selling points for local
	3	towns and businesses. If you can start putting that out
	4	there, it should be well received as far as the economic
	5	side of the house goes.
	6	Besides that I want to thank you guys for your
	7	time and if theres any questions, I have cards with me and
	В	Ill distribute them out as requested. Thank you.
	9	MS. SUTER: Anybody else? Okay. With that the
	10	formal part of the meeting is going to close. Im just going
	11	to remind everybody that in FERC we have a website,
	12	www.FERC.gov. There is a link called e-library. If you
	13	type in the docket number for this project, CP14-96, you can
	14	use the library to gain access to everything that is on the
	15	public record for this project. That includes all filings
	16	that are made by Algonquin. Anything issued by FERC.
	17	Anything any commenter has made by the project, the
	18	transcript. Everything is available on that public docket.
	19	After a few weeks the transcripts will for this meeting and
	20	all of the meetings for the DETSs will be placed on the
	21	public record. However, if you are interested in obtaining
	22	copies of that transcription before we are able to post
	23	them, they will be available at a cost through the court
	24	reporter. You can please see him in a few minutes if you
	25	are interested. Otherwise, on behalf of the Federal Energy

20141014-4010 FERC PDF (Unofficial) 10/14/2014
                             PROCEEDINGS
                      MS. SUTER: Good evening. On behalf of the
        3 Federal Energy Regulatory Commission or FERC, I want to
        4 welcome you all here this evening for the public comment
        5 meeting on the Draft Environmental Impact Statement or Draft
        6 EIS for the Algonquin Incremental Market Project or AIM
            Project. Let the record show that the DEIS comment meeting
            began 6:33 p.m. on September 10th in Danbury, Connecticut.
                      My name is Maggie Suter and Im the environmental
           project manager at FERC for the AIM Project. With me here
           this evening is Karen Gentile with the Department of
            Transportations Pipeline and Hazardous Material Safety
            Administration and also up at the front is Jennifer Lee with
            an environmental consulting firm that is helping FERC
            prepare the EIS.
                      Also with us this evening, anyone wearing one
           these badges who can help you. We have Amanda Mardiney who
            is with FERC and we also from our consulting firm Andrea
            Thornton and Larry Brown. The U.S. Army Corps of Engineer
            Environmental Protection Agency and the U.S. Department of
           Transportation Pipeline and Hazardous Materials Safety
       22 Administration are participating as cooperating agencies in
       23 the preparation of the EIS. I would like to thank those
       24 agencies for their continued assistance with the EIS review
       25 process. Corey Rose from the U.S. Army Corps of Engineers
```

```
20141014-4010 FERC PDF (Unofficial) 10/14/2014
        1 is here this evening, down here at the front. If any of you
           have any questions about their permitting process or role,
            please find her after the meeting.
                       Im now going to briefly turn things over to Karen
           who will go over DOTs process and how it relates to the
            review of these projects then Ill come back and explain a
            little bit about FERC. Who we and where we are in the
            process and where things will go from here.
                       Karen?
                       MS. GENTILE: Good evening. As Maggie said, Im
       11 Karen Gentile and I am one of the community assistants and
            technical services managers for the Pipeline and Hazardous
            Materials Safety Administrations Office of Pipeline Safety
            located in the eastern region.
       15
                       Id like to thank FERC for the opportunity to
            provide an overview of PHMSAs Office of Pipeline Safety
            Program. Upon request from FERC, our office provides
            support on the National Environmental Policies Act. If
            Algonquin Gas Transmission receives permission from FERC for
            its Algonquin Incremental Market Project, PHMSAs Office of
            Pipeline Safety in cooperation with state partners will
       22 provide the regulations for the construction and safe
       23 transportation of natural gas through the pipeline to
            include compressor stations, metering facilities and
       25 associated piping and will maintain regulatory oversight
```

fied in Title 49 Code of Federal Regulations Part 192.
perator must establish comprehensive written procedures
ibing the types and frequencies of monitoring to insure
ontinued safe operation. The monitoring that an
tor must performs includes monitoring the operation and
acy of external coercion prevention systems, inspecting
esting pressure release devices, inspecting and

20141014-4010 FERC PDF (Unofficial) 10/14/2014 1 operating transmission line valves, patrolling the right away and surveying for leaks. In addition to this routine monitoring PHMSAs 4 Pipeline Safety Regulations require that natural gas transmission pipeline operators implement integrity management programs. These programs require a periodic integrity assessments of natural gas transmission pipelines in highly populated areas. These assessments provide a comprehensive understanding of the pipeline conditions and associated 11 risks. Inline inspection tools frequently referred to as Smart Pigs provide detailed information about pipe construction. During an integrity inspection sensors and computers are sent through the pipeline. These devices can indicate pipe deformations and changes in wall thickness of the pipeline. By analyzing the data collected during inline 17 inspections operators can locate and repair areas of the pipeline that may have been damaged or deteriorated. Integrity management programs require operators to detect and correct damage to their pipelines before damages result 21 in leak. A well-constructed and maintained pipeline must 23 also be properly operated. Operators must insure that personnel performing operations, maintenance or emergency 25 response activities are qualified to perform these

```
20141014-4010 FERC PDF (Unofficial) 10/14/2014
        1 functions. This is to minimize operator error. Operators
           must implement training and testing programs for employees
            and contractors whose performance is crucial to maintaining
           the safety of the pipeline and pipeline facilities.
                       Pipeline operators must also implement public
            awareness programs within their communities. Operators
            communicate pipeline safety information to local public
            officials, the public living along the right away, emergency
            responders and excavators.
                       The public awareness programs emphasize the
           importance of calling 811 prior to excavating. A call to
            811 provides notification to all participating utility
            owners including pipeline operators to mark the locations of
            their facilities and monitor the excavation to help insure
            that facilities are not damaged.
                       The public awareness programs also include
            information on how to recognize a pipeline emergency, how to
            respond appropriately, how to report the potential emergency
            to aid in the rapid response by both pipeline operators and
            community emergency responders.
       21
                       In addition to public awareness programs,
       22 pipeline operators are also required to have written
           emergency plans in place prior to operation of their
           pipeline facilities. These program require operators to
       25 establish and maintain liaison with fire, police and other
```

```
20141014-4010 FERC PDF (Unofficial) 10/14/2014
        1 public officials among other things to acquaint the
           officials and the operator with their respective
            responsibilities and resources in planning for and
            responding to emergencies.
                       These emergency plans must at a minimum provide
           for establishing and maintaining communication, prompt and
            effective response and availability of personnel, equipment,
            tools and materials as needed at the scene of an emergency.
            These plans help both the operator and the emergency
            responders know their roles and responsibilities and
       11 available resources prior to the need to respond to an
            incident.
       13
                       If the safety inspections find inadequate
            procedures or that an operator is not following their
            procedure, PHMSA is authorized to require remedial actions,
            assess civil penalties and initiate criminal action if
       17 necessary.
                       PHMSA has reviewed the Draft Environmental Impact
            Statement as it relates to pipeline safety. This document
            specifies that Algonquin will construct, operate and
            maintain the proposed pipeline to meet or exceed the minimum
            Federal Safety Standards in Title 49, CFR Part 192 for the
            transportation of natural gas by pipeline.
                       Safety is PHMSAs primary mission and we
       25 understand how important this mission is to you and your
```

```
20141014-4010 FERC PDF (Unofficial) 10/14/2014
        1 community. Again, Id like to thank you for this opportunity
            to provide an overview of PHMSAs pipeline safety program.
                       MS. SUTER: Thank you, Karen. For those of you
            who have not been to any of our previous meetings and do not
            know much about FERC, Im going to give you a very brief
        6 overview.
                       FERC is an independent regulatory agency that
            regulates the rates for interstate transmission of
            electricity, natural gas and oil and the siting of
            interstate natural gas and hydroelectric facilities. FERC
       11 has up to five commissioners who are appointed by the
            President with the advice and consent of Senate. FERC is
            the lead federal agency responsible for the National
            Environmental Policy Act of 1969 or NEPA review of the AIM
            project and the lead agency for the preparation of the Draft
            EIS and upcoming final EIS.
       17
                      NEPA requires FERC to analyze the environmental
            impacts, consider alternatives and appropriate mitigation
            measures on proposed projects. In February of 2014,
            Algonquin Gas Transmission filed an application under
            section 7 of the Natural Gas Act. This project would
       22 consist of the replacement of 26.3 miles of existing
       23 pipeline with new larger diameter pipelines in the same
       24 location. The installation of 11.3 miles of new pipeline
       25 and the addition of compression at six existing compressor
```

20141014-4010 FERC PDF (Unofficial) 10/14/2014 1 stations and the abandonment of compression at one of these 2 compressor stations. And all of this is spread out 3 throughout New York, Connecticut, Rhode Island and 4 Massachusetts. The primary purpose of this meeting tonight is to give you the opportunity to provide specific environmental comments on the Draft EIS that was prepared by FERC. It will help us most if your comments are as specific as possible regarding the proposed project and the Draft 10 EIS. 11 I would again like to clarify that this project is being proposed by Algonquin. It is not being proposed by the FERC. Rather the FERC is the federal agency responsible for evaluating applications to construct and operate interstate natural gas pipeline facilities. The FERC, therefore, is not an advocate for the 17 project. Instead, as mentioned throughout this process, the FERC is an advocate for the environmental review process. 19 During our review of the project, we assembled information 20 from a variety of sources including Algonquin, you the 21 public, other state, local and federal agencies and our own 22 independent analysis and field work. We analyzed this 23 information and prepared a Draft EIS that was distributed to the public for comment. A notice of availability of the Draft EIS was

20141014-4010	D FERC PDF (Unofficial) 10/14/2014 10
1	issued for this project on August 6, 2014. We are nearing
2	the end of the public comment period of the Draft EIS. The
3	comment period ends on Monday, September 29, 2014. All
4	comments received, written or spoken, will be addressed in
5	the final EIS and are given equal consideration. I
6	encourage you if you plan to submit comments and have not,
7	please do so here today either verbally during the comment
8	portion of our meeting or in writing using one of the forms
9	that we had available at the sign in table.
10	You may also submit comments using the
11	procedures outlined in the Notice of Availability which
12	includes instructions on how to submit your comments
13	electronically. If you received a copy of the Draft EIS
14	either on paper or CD you will automatically receive a copy
15	of the final EIS. If you did not get a copy of the Draft
16	EIS them you are currently not on our mailing list. I
17	apologize. Our mailing list is very large and undergoing
18	constant revision. If you would like to get a copy of the
19	final EIS, please make sure you sign in at the sign in table
20	providing your name and address and you will receive a copy
21	of the final DEIS. I will emphasize FERCs default is to
22	provide you with a CD copy of the EIS. If you would prefer
23	a paper copy you must indicate that to us.
24	I would like to remind everyone that neither the
25	draft or the final EIS are decision making documents. In

20141014-401	0 FERC PDF (Unofficial) 10/14/2014 11
1	other words, once they are issued, it does not determine
2	whether the project is approved or not. I also want to
3	differentiate between the roles of the two distinct FERC
4	groups, the commission and the environmental staff. The
5	FERC staff present tonight are with the FERC environmental
6	staff and we will oversee the preparation of the final EIS
7	for this project which is the next step in the environmental
8	review. We do not determine whether or not to approve the
9	project.
10	After the final EIS is issued, the FERC
11	commissioners will make a determination on whother to issue
12	a Certificate of Public Convenience and Necessity to
13	Algonquin. The commission will consider the environmental
14	information in the EIS, public comments as well as of a host
15	of non-environmental information such as engineering,
16	markets and rates in making its decision to approve or deny
17	the applicants request for a certificate.
18	There is no review of PERCs decision by the
19	President or Congress. Thus, maintaining FERCs role as an
20	independent regulatory agency and providing for fair and
21	unbiased decisions. Only after taking the environmental and
22	non-environmental factors into consideration will the
23	commission make its final decision on whether or not to
24	approve the project.
25	If the commission votes to approve the project

20141014-401	.0 FERC PDF (Unofficial) 10/14/2014 12
1	and a Certificate of Public Convenience and Necessities is
2	issued Algonquin will still be required to meet certain
3	conditions outlined in the certificate before it could begin
4	construction.
5	If approved, FERC environmental staff would
6	monitor the project through construction and restoration
7	performing inspections to document environmental compliance
8	with Algonquins proposed plans and mitigation and the
9	additional conditions in the FERC certificate.
10	Now we will move onto the part of the meeting
11	where we will hear comments from the audience members. If
12	you would rather not speak tonight or dont get to say
13	everything you wanted, you may hand in written comments
14	using the comment form at the back of the table and send
15	into the secretary of the commission by following the
16	procedures outlined in the Notice of Availability. Either
17	way, your comments will be considered with equal weight.
18	This meeting is being recorded by a court
19	reporter so all of your comments will be transcribed and put
20	into the public record. We will have a few ground rules
21	this evening. All speakers must come up to one of these two
22	podiums in the front of the room and speak into the
23	microphone. You cannot yell a question or a comment out
24	from the audience as this cannot be accurately recorded by
25	the court reporter for the public record. To help keep this

```
20141014-4010 FERC PDF (Unofficial) 10/14/2014
            evening flowing, those of you who wish to speak received a
            numbered ticket. We will be calling speakers in that
            numbered order. It will help if we can keep one or two
           people on deck prepared to speak so we dont have to wait
            after each speaker for you to make your way down to the
           microphone. Because you have a numbered ticket, I ask that
            each speaker when you arrive at the microphone please state
            and spell your name for the court reporter. We are allowing
            one ticket per person and you may not allot your time to
            another speaker.
       11
                        Most importantly please show respect for
            everyone speaking and do not disrupt a speaker. Were now
            ready to call our first speaker.
                       MS. LEE: So again, as Maggie mentioned. For
            your convenience there are two podiums to come up to. So
            with that we will take speaker number one.
                       MR. ROOT: My name is James Root. I live in West
            Danbury. Im just have to speak on the issue and --
                       MS. LEE: Excuse me, sir. Can you please spell
       19
            your name for the record to make sure it gets transcribed?
PM3-1
                       MR. ROOT: Sure. R-O-O-T. And I had a few
       22 concerns. Im living about three miles down wind of the
           compressor station. Im concerned about the exhaust
            emissions. I know the station has been there, the
            compressor station, for a while but as I understand it its
```

PM3-1 See the responses to comments SA4-1 and SA4-9 for additional information regarding compressor station emissions and emission impact analyses. Each of the compressor stations proposed to be modified as part of the Project have existing air emission permits, as summarized in section 4.11.1.2 of the EIS. These permits include monitoring, recordkeeping, and requirements to report information to the applicable state air permit agency. See also the responses to comments SA4-4 and LA5-9 for information regarding potential shale gas toxicity.

```
20141014-4010 FERC PDF (Unofficial) 10/14/2014
         1 going to be significantly increased in size. And I talked
PM3-1
        2 to the Spectra spokesperson or Spectra foreman about the
         3 testing over there. And he had some answers but Im
         4 concerned about the nature of this testing over there. He
         5 explained that they test the exhaust emissions. And this is
         6 running 24/7. So its an important issue but I want to know
            how independent these measurements are. I mean how involved
            is your agency? I dont mean to impune Spectra but Im
         9 interested to know whether there are other folks other than
            Spectra doing tests on whats coming out of these exhausts.
                       And also one reason this question has -- more
            importance is as I understand it the nature of this gas and
            its origins can be changing. He downplayed that but as I
            understand it an increasing amount of this gas is coming
            from the Shell gas and supposedly its dirtier. And that
            could have ramifications for the exhaust obviously and the
            combustion biproducts. Thank you.
                       MS. LEE: Thank you. Speaker number two.
                       MR. KOHLHASE: Hello. My name is Steve Kohlhase
            thats K-O-H-L-H-A-S-E. I live in Brookfield, Connecticut
            and I think Ive known one or two of you for a while. Im
            going to read from the script just like we do up front.
                       The reason Im here is on September 7th I filed
            comments to the E Draft EIS and sent copies directly to FERC
            personnel, Maggie, Rich and a couple of others like Eric
```

2014101	14-401	15 LO FERC PDF (Unofficial) 10/14/2014
	1	Tomasi. And wanted to assure that these comments that I
	2	have been filing for a number of years on a problem Im going
	3	to mention are attended to in the AIM Project.
PM3-2	. 4	For nearly five years, I have been asking for an
PM3-2	5	investigation including melchbors who signed a petition into
	6	the cause of vibration sound problems that became noticeable
	7	after changes to the Algonquin and Iroquois Systems in 2007
	8	and 2005 as part of the NEO7 project. And those problems
	9	have remained are called hum and flutter. To date, that has
	10	not been done at FERC and FERC has avoided putting that into
	11	the Draft EIS to my chagrin and to many others.
	12	FERC was cognizant of the problems and I just
	13	want to mention a couple of the highlights of whats in the
	14	filings. This is the purpose that I am here is I want these
	15	the filing which is a rather thick packet thats been
	16	filed on a number of dockets to be attended to and not to be
	17	dismissed as it has been most of these five years.
	18	The hum is caused by vibrations the hum is
	19	caused by conditions inside the high pressure natural gas
	20	transmission lines which radiate extra low frequency and low
	21	frequency sound waves inducing structural resonates
	22	resulting in a vibration sound thats similar to a large
	23	idling diesel engine sitting in the neighborhood which
	24	theres more and more people along the right aways along 84
	25	that are telling me about it.

PM3-2 See the response to comment LA34-1.

```
20141014-4010 FERC PDF (Unofficial) 10/14/2014
                       The resulting vibration sound is like the diesel
PM3-2
(cont'd)
         2 engines and theyre sitting right in the neighborhood. Not
         3 noticed by many but affecting many. The result in vibration
         4 sound is called hum and it saturates the interiors of
         5 enclosed structures like homes and enclosures. It is
         6 occurring throughout the U.S. and counties within a few
         7 miles of the right aways of many of these lines. Not all
         8 lines but something is going on with these changes that
         9 these companies are doing that is increasing the occurrence
        10 of this -- this phenomena around the country as it is in
        11 places in Canada and the location.
                       Flutter is another -- is another phenomena. Its
        13 a localized phenomenon to a neighborhood where the
            compressor stations have turbines that you have unstable or
        15 instable work tech shedding coming off of the exhaust stacks
        16 causing a pressure wave in the atmosphere that permeate
        17 yards within -- within a local distance of the compressor
        18
                       Why? I am a mechanical engineer. Im in the
        20 chemical industry and Ive been around a lot of this
            equipment. These are problems that can be resolved and it
        22 could be because its using different gas in it. Has
        23 different, you know, properties.
                       The first sensation, the problems were
            uncomfortable low frequency monotone vibration sounds while
```

		*
PM3-2	1	trying to sleep in bed at night in 2009. Contacting
(cont'd)	2	Iroquois, there was cooperation in trying to figure out what
	3	it was. It escalated and became to cause sick feelings,
	4	altered sleep patterns, ringing of ears and anxiety. This
	5	would in a couple of months of the first sensation of the
	6	problem.
PM3-3	1 7	There were noticeable changes in wild life,
11133	8	habitat. The coyotes, they started going crazy and they
	9	left the areas where they had been habituating for years.
	10	The demur of the pet dog, we had to put on Prozac for three
	11	months. Surface vibrations and standing pool waves.
	12	After some early cooperation with Iroquois, it
	13	turned out that they were FERC was advised that no
PM3-4	14	further attention to the matter would be forthcoming in
	15	early 2010. We asked for the support of Attorney General
	16	Blumenthal Representative Murphy and Brockfields first
	17	Selectman which they followed up with FERC and asked them
	18	for involvement.
	19	Some progress seemed to be occurring but fell far
	20	short of studying the underlining problem. At this point,
	21	independent investigation had begun where we found that not
	22	only that the Iroquois compressor station was creating low
	23	frequency sound waves called Rolly sound waves. The
	24	pipelines for Iroquois and Algonquin are radiating low
	25	frequency sound waves. Wide band low frequency sound waves

PM3-3 Comment noted. There are no current federal guidelines on low frequency noise. Algonquin would comply with all federal, state, and local noise regulations. See also the response to comment LA34-1.

PM3-4 See the response to comment LA34-1.

PM3-4
         1 below 50 hertz.
(cont'd)
                       Ive gone through and the information is all
         3 included in the filing that Ive made and I sent Maggie Wu a
         4 direct copy. I didnt have your right email first but I got
                       Mid 2011, a severely flutter impact household
PM3-5
         7 within 455 feet of the Iroquois station engaged FERCs
         8 Dispute Resolution Department. I think its DRS, Dispute
         9 Resolution Services as I did also once I found out that the
            lady was -- was working with them. FERC engineers visited
        11 our area and validated that the vibrations from some cause
             probably most likely flutter but it could also be the home
             aspects were causing vibrations in our homes.
                        This occurred in November 2011 and the point I
        15 want to make here is these gas companies are independent of
             these problems no matter what FERC tries to do. FERC needs
        17 maybe more power and more personnel to -- to handle all
             these projects that are going on in this country.
                        So FERC requested a plan to deal with these
        20 problems in December of 2011. Six months later, in July of
        21 2012, their request was rebuked and the response was that
        22 there was only a few people that were suffering from this or
        23 impacted. This is not the exact words but they were
            impacted by these problems and the -- the benefit to the
            greater population didnt -- werent spending the money to
```

PM3-8 See the responses to comments FL8-3 and IND71-5.

201410	014-401	10 FERC PDF (Unofficial) 10/14/2014 21
PM3-9	1	I bring this up because the Buchanam Viewpoint
	2	Elementary School, the nearby village park, the area around
	3	Indian Point Energy Center, the South Buchanan Electrical
	4	Substation, hundreds of homes, churches, Danbury High School
	5	are either adjacent to or within the currently calculated
	6	potential impact radius. Many of these are locations where
	7	people gather outside and are unsheltered. And my question
	8	is what safety measures exist to protect people in these
	9	critical areas in the event of a fire explosion?
PM3-10	10	Is remote valving sufficient to protect people?
	11	To prevent the loss of human life and property in those
	12	events? There is new pipeline as you know going new 42
	13	inch pipeline going in through the Verplank area. Has the
	14	commission considered alternate routes for the new pipeline
	15	that does not include sites where people gather outside and
	16	unsheltered? Where valving will most likely not protect
	17	them during the critical few moments after an ignition? And
	1.8	has the commission adequately considered the Algonquins
	19	Integrity Management Plans projected into the future? If
	20	these are new computerized systems that do not exist on the
	21	current system or are upgrades of the current system are
	22	there plans to monitor and upgrade these as we project 20,
	23	30 years into the future?
PM3-11	24	I also have a concern that the EIS is not
	25	complete as written because Spectra has recently announced

PM3-9 Section 4.12.1 of the EIS discusses federal safety standards for natural gas pipelines and how these standards are applied in HCAs. Section 4.12.3 of the EIS discusses safety-related concerns and other specific measures that Algonquin has proposed or that we are recommending to further address public safety concerns. See also the responses to comments FA4-25, SA1-9, SA4-5, and LA2-6.

PM3-10 Section 4.12.1 of the EIS discusses the required maximum distance between block valves on the pipeline, which is a function of class location. Remotely activated valves, proposed by Algonquin, exceed current federal requirements, and must be monitored and inspected in accordance with PHMSA's regulations.

PM3-11 See the response to comment FA3-5.

201410:	14-401	0 FERC PDF (Unofficial) 10/14/2014 22
PM3-11	1	the Atlantic Bridge project which includes additional
(cont'd)	2	compression at the southeast station and the replacement of
	3	a four mile stretch of 26 inch pipeline with 42 inch
	4	pipeline in Yorktown, New York.
	5	These facilities fall either within or directly
	6	adjacent to the AIM study corridor. Scoping, serving and
	7	review of the Atlantic Bridge project will take place during
	8	the same time frame as the proposed AIM construction and the
	9	facilities are clearly intradependent both financially and
	10	structurally. Does this not represent project segmentation
	11	which I believe the Federal Circuit Court of Appeals just
	12	determined was inadmissible on a similar project, the
	13	Tennessee pipeline.
	14	Will the Draft BIS be revised to provide analysis
	15	of the cumulative impacts of both of these projects as well
	16	as any other functionally financially connected projects
	17	planned for the Algonquin pipeline as a whole and as part of
	18	a broader development project?
M3-12	19	And my last concern is when will the EIS include
	20	the Indian Point Hazard analysis. It has I cant find it
	21	anywhere in the document. It says its waiting on Entergy
	22	to submit that. If Entergy does not submit that in a timely
	23	manner will the public have an opportunity to review their
	24	analysis? Will there even be an analysis? Thank you very
	25	much.

PM3-12 See the response to comment FA4-25.

	1	MS. LEE: Thank you. Were up to number four.
	2	MS. WEININGER: Good evening and thank you. My
	3	name is Ellen Weininger, W-E-I-N-I-N-G-E-R. I am the
	4	director of Educational Outreach for grassroots
	5	environmental education of fine space environmental health
	6	nonprofit.
PM3-13	7	We will be submitting more extensive written
	8	comments but first I must state that FERCs conclusion that
	9	the AIM Project will have no significant environmental
	10	impact in according to the Draft EIS is baseless as
	11	evidenced by the incomplete and premature Draft EIS that
	12	outlines 42 FERC staff recommendations in section 5 that
	13	involve missing required documents. The Draft EIS fails to
	14	meet the requirements of the National Environmental Policy
	15	Act, NEPA, and also fails to provide for mitigation plans
	16	prior to permitting and the opportunity for the public to
	17	weigh in on these documents that have yet to be integrated
	18	into the EIS.
	19	At minimum, the Draft EIS must be withdrawn or
	20	required documents submitted and the complete DEIS must be
	21	prepared and reissued with a new public comment in order to
	22	meet basic, very basic obligations of NEPA. Given the
	23	limitations here this evening, III just take the opportunity
	24	to make several other points regarding the deficient Draft
	25	EIS.

PM3-13 See the response to comment FA4-1.

PM3-14	1	Theres no mention in the EIS of radon and
	2	radicactive contaminants in the pipeline and its
	3	infrastructure and potential for contamination during its
	4	operations and maintenance and lack of any mitigation
	5	planning. It is well documented that the source of natural
	6	gas supply from the Marcellus shale underlining New York,
	7	Ohio, West Virginia and Pennsylvania is known for its high
	8	levels of radon.
	9	Industrys own publication guidelines for the
	10	management of naturally occurring radioactive material in
	11	the oil and gas industry by the International Association of
	12	Oil and Gas Producers states during the production process
	13	norm flows with cil, gas and water mixture and accumulates
	14	in scale, sledge and scrapings. It can also form a thin
	15	film on the interior surfaces of gas processing equipment
	16	and vessels. Radionuclides such as Lead, 210 and Polonium
	17	210 can be found in pipelines scrapings as well as sludge
	18	accumulation in tank bottoms and other infrastructure.
	19	The ANSPA study, the only industry study on radon
	20	and pipelines found radon levels at 17 picocuries per liter
	21	in Lambertville, New Jersey. Dismissed as significant. Yet
	22	the USEP action level for radon is 4 picocuries per liter
	23	and considers that there is no safe level of radon exposure.
	24	Radon decay products and scaling in pipeline infrastructure
	25	are just not accounted for.

PM3-14 We disagree. See the response to comment SA4-4.

```
20141014-4010 FERC PDF (Unofficial) 10/14/2014
                       The gas being transported through the pipeline is
PM3-14
(cont'd)
        2 laced with gaseous radon and its decay products accumulate
        3 along the interior of the pipes. As the gas is compressed
        4 and regulated, radioactivity levels will pose a risk to
        5 workers at compressor metering and regulating stations,
        6 valves and pigging stations. Residents are also at risk of
        7 exposure during these activities and as endpoint users of
            the gas in their homes through kitchen stoves, ovens, hot
        9 water heaters, dryers and other gas appliances.
                       In addition to radon decay products, PCBs, black
            powder and anaerobic microbials also accumulate in pipeline
            infrastructure including at picking stations where pipes are
            inspected or cleaned and in condensate tanks at compressor
            and metering and regulating stations as well as in venting
            operations throughout pipeline -- throughout the pipeline.
                       Radioactive materials can be inhaled when these
       17 contaminants are dislodge by mechanical means and picking
            operations. It is well known that radioactive contaminants
        19 do not dissipate. They spread further and become airborne
       20 in dust particles and inhaled and migrate in storm water
        21 runoff onto nearby properties and water supplies. Radon is
           known as the leading cause of lung cancer in nonsmokers.
       23 Theres no safe level of exposure.
                       Polonium and lead, its decayed products have a
            half live of 22.3 years and 138 days respectively. Both are
```

201410	14-401	0 FERC PDF (Unofficial) 10/14/2014 26			
PM3-15	1	solids known to attach to dust particles. Lead is	I	PM3-15	See the responses to comments SA4-4, SA6-5, and SA1-12.
	2	neurological poison with no safe threshold level of			
	3	exposure. Low level lead exposure is an important risk			
	4	factor for renal failure and has also been linked to low			
	5	birth weight.			
	6	Lead is classified as a probable human			
	7	carcinogen. Polonium is considered a radioactive			
	8	carcinogen. The exposure pathway of all three of these			
	9	radioactive materials is through inhalation and possible			
	10	ingestion. When radon is inhaled, it is absorbed by the			
	11	lungs where it decays further into polonium and lead			
	12	damaging lung tissue. Polonium and lead are also known to			
	13	damage DNA and RNA.			
	14	So my question is will FERC be looking at this			
	15	issue and incorporating it completely and assessing that			
	16	issue in the Draft EIS which must be completed and reissued			
	17	and allow for a full public comment period? What will FERC			
	18	be doing to draft this very serious issue that has been			
	19	completed neglect and dismissed?			
PM3-16	20	We also recommend comprehensive and transparent	1	PM3-16	See the response to comment SA4-10.
	21	health impact assessment which has been called for		1.10 10	see the response to comment silving.
	22	throughout this process and has not been mentioned and has			
PM3-17	23	been dismissed. Accumulative environmental impact study of			
PM3-1/	24	all the infrastructure, the accumulative impacts of all of			
	25	the compressor stations. Many of these compressor stations	I	PM3-17	See the response to comment CO12-10.

	14-401	0 FERC PDF (Unofficial) 10/14/2014 27
PM3-17	I 1	are within a few miles of each other and the air emissions
(cont'd)	2	do not know any borders between state lines or communities.
	3	And cumulative I would like to know that cumulative
	4	impact analysis is being fully assessed in dependently and
	5	transparently.
	6	Also cumulative risks assessment must be
PM3-18	7	conducted transparently and independently. It was mentioned
	8	earlier the risk assessment of the AIM expansion project
	9	which is within 1,500 feet of the Indian Point Nuclear Power
	10	spent fuel pool and other sensitive nuclear power plant
	11	infrastructure there. It intersects there with two other
	12	proposed high voltage electrical lines and also is within
	13	very significant seismic zone for peak scale Sanford fault
	14	line and the Ramapo fault line.
	15	Individually any of these structures of great
	16	concern and are risky and hazardous. Putting them all
	17	together in one place right next to Indian Point and in a
	18	seismic zone is unconscionable and and has not even been
	19	addressed. Not individually and not cumulatively and the
	20	this issue needs attention and I would like to know if FERC
	21	is planning to address this. Not by saying that Entergy and
	22	Spectra Energy are discussing the issue or doing some sort
	23	of analysis but through an independent and transparent and
	24	cumulative risk assessment of all of these pieces of
	25	infrastructure.

PM3-18 See the responses to comments FA4-25, SA4-2, and SA7-4.

PM-125 Public Meetings

201410	14-4010	D FERC PDF (Unofficial) 10/14/2014
7.000.000 (March	127 XX	
PM3-19	1	The proposed electrical lines, high voltage
	2	electrical lines can spark in a process called arching and
	3	can cause a rupture of that that pipeline right next to
	4	Indian Point. That has not been addressed at all.
D3 42 20	5	Also asking for monitoring of naturally occurring
PM3-20	6	radioactive materials according to regulatory frame work of
	7	the International Atomic Energy Agency and the National
	8	Council on Radiation Protection which must be required and
	9	implemented for all gas and oil production and distribution
	10	operations. Right now there is there is an exemption
	11	through, you know, of record for these these requirements
	12	and theres no guidance documents on this and that is also a
	13	serious concern and I would like to know how FERC will be
	14	addressing this and and that it will be included in a new
	15	complete document.
	16	And additionally, a question of hazardous
	17	materials management plan including the plan for disposal of
	1.8	radioactive wastes from condensate tanks and pipelines must
	19	be required and implemented and is not mentioned and not
	20	incorporated. And Id like to know is FERC going to include
	21	that information and that requirement and that important
	22	assessment? These are radioactive materials. They do
	23	they are a part of this operation as I mentioned earlier
	24	through industries own documentation they need to be
	25	addressed in this document. Thank you.

PM3-19 See the response to comment SA7-4.

PM3-20 See the response to comment SA4-4. Section 4.8.6.2 of the EIS discusses handling of PCB-contaminants. Algonquin's SPCC Plan covers handling of other potentially hazardous materials during construction.

201410	14-401	0 FERC PDF (Unofficial) 10/14/2014 29
	1	MS. LEE: Thank you. We are up to speaker number
	2	five.
	3	MS. WILLIAMS: My name is Sheila Williams,
	4	S-H-E-I-L-A W-I-L-L-I-A-M-S. I do understand that the EIS
	5	drafts are incomplete. Im a school nurse. I work nurse. I
	6	work just across the state line. I have within a very short
	7	radius approximately 3,000 students in that proximity.
PM3-21	8	My concerns are relating to the compressor
	9	station and all the products that have already been
	10	described to you as being released into the air. The
	11	polonium radioactive lead, radon being a major issue. The
	12	risks and the illness affiliated with those exposures for
	13	especially fragile elderly people. People with respiratory
	14	problems and all other problems. One of my major concerns
	15	is the risk for the students and for young people. The
	16	exposure to any of these products risks their cellular
	17	tissue and if any mutation occurs to the tissues especially
	18	in the childrens lungs that over time they will be
	19	cancerous. We know digarette smoking prompts cancer in the
	20	lung and I feel very strongly that these risks were putting
	21	the children at will be difficult to document and prove over
	22	the long term but I do feel that this one of my guestions
	23	would be in this system you have will the blow downs be
	24	planned or scheduled and will the schools be notified?
	25	Will it be required for the children to be kept

PM3-21 See the responses to comments SA4-1, SA4-3, SA4-4, and SA4-9.

	4-401	0 FERC PDF (Unofficial) 10/14/2014 30
PM3-22	1	in the school in an effort to protect them from the
	2	chemicals that will be airborne? What services will be
	3	provided for students as they age and have been affected by
	4	these chemicals? And will Spectra take responsibility if
	5	documentation can be proven that theyve been harmed by these
	6	exposures?
	7	Clear air is critical. We really dont need it to
	8	be already closed. Keep children with asthma inside the
	9	school on certain days where they have poor air quality in
	10	our area? Thats already an issue. The blow down exposures
	11	as I understand it with Spectra theres you have a blow
	12	off at some point and they dont meet their maximum limit but
	13	another section of the system where theres a blow off burns
	14	off less and less chemicals that they can take up.
	15	Unlike when here we had the speaker that you
	16	explained we cant share our minutes. That we cant say well
	17	give up three minutes for someone else to use it? Well, in
	18	this case with the blow downs and all the chemicals that.
	19	will be airborne that will be permitted to go over a certain
	20	amount and put the children at risk. I trust that there
	21	will be more thorough environmental studies to be completed
	22	in an effort to protect the children and any other area
	120.00	where theres exposure to all these chemicals from the blow
	23	
	23	downs. Thank you.

PM3-22 See the responses to comments SA4-1, SA4-3, SA4-4, SA4-9, and SA4-10.

PM-128 Public Meetings

201410	14-401	.0 FERC PDF (Unofficial) 10/14/2014 31
	1	MR. MARTIN: Hello. My name is Benjamin Martin
	2	thats B-E-N-J-A-M-I-N M-A-R-T-I-N. Thank you for the
	3	opportunity to comment on Spectras expansion of the
	4	Algonquin Natural Gas Pipeline.
PM3-23	5	On behalf of 350 Command in Connecticut, I would
	6	like to point out the risk and dangers that Connecticut
	7	would face by expanding this pipeline. Natural gas
	8	pipelines have been proven to link toxic chemicals and
	9	methane gas and compressor stations are even worse. The
	10	proposed expansion would increase these emissions because of
	11	the higher volume and pressure of natural gas being
PM3-24	12	transported. It would also increase the risk to Connecticut
	13	citizens of explosions like the ones that have happened in
	14	recent years in Brooklyn, New York, Middletown, Connecticut
	15	and Springfield, Mass.
	16	The problem with bearing these risks is that CT
PM3-25	17	would gain no benefits. The current supply of natural gas
	1.8	is enough to meet customer demand and the purpose of this
	19	pipeline is to move the gas through Connecticut to other
	20	areas and for export. We should not be bearing the dangers
	21	of this pipeline for Spectras profit.
	22	At a time when the United Nations and every
PM3-26	23	scientific body around the world is employing us to lower
	24	emissions, we should not be building a new fossil fuel
	25	infrastructure. Given the scientific data that the world

PM3-23 See the responses to comments SA4-1, SA4-4, and SA4-9.

PM3-24 Section 4.12 of the EIS addresses the federal safety standards for natural gas pipelines, how these standards are applied in HCAs, and the risk to the public.

PM3-25 Section 1.1 of the EIS identifies the purpose and need for the Project, including deliveries of natural gas to customers in Connecticut.

PM3-26 Comment noted. Section 4.11.2 of the EIS presents additional information regarding emissions from the Project.

PM-129 Public Meetings

201410	20141014-4010 FERC PDF (Unofficial) 10/14/2014 32		
	1	has produced, you can basically boil the EIS statement down	
	2	to one sentence. There is no such thing as safe natural	
	3	gas.	
PM3-27	4	We have the technology to build renewable energy	
	5	to meet all of our current and future power demands. We	
	6	need to be shutting down pipelines not expanding old ones	
	7	and building new ones. Thank you.	
	В	MS. LEE: Thank you. Number seven?	
	9	MR. SORGE: Hi. My name is Anthony Sorge. Its	
	10	A-N-T-H-O-N-Y S as in Same O-R-G-E. I live in apartments	
	11	around Danbury for seven years. I really love my time in	
	12	this community and I still feel really connected to it. So	
	13	when I find found out about the proximity of the	
	14	Algonquin pipeline expansion to several apartment complexes	
PM3-28	15	in the Saw Mill Road area, I was very concerned. Weve seen	
	16	explosions at compressor stations and pipelines around the	
	17	country and an explosion near these apartments could be	
	18	catastrophic.	
	19	As an animal advocate, Im also concerned about	
PM3-29	20	the potential impact of the pipeline expansion on wild life	
	21	in Danbury including two endangered species, the bog turtle	
	22	and the Indiana bat. I urge you to conduct more	
	23	comprehensive studies about the presence of these animals	
	24	who have known historically to have found habitats in	
	25	Danbury and other vulnerable species listed in the DEIS on	

PM3-27 See the response to comment FL2-2.

PM3-28 See the response to comment PM3-24.

PM3-29 Section 4.7.1 of the EIS has been revised to include the results of surveys for bog turtles and Indiana bats. Survey reports for these species have been submitted to the FWS and CTDEEP along with proposed conservation measures. Section 4.7 of the EIS has been revised to include the conclusions of our consultation with the FWS. Any additional avoidance or minimization measures required by the CTDEEP would be addressed during the CTDEEP permitting process.

201410	14-401	.0 FERC PDF (Unofficial) 10/14/2014 33
PM3-29 (cont'd)	1	the route of the pipeline expansion as well as a potential
	2	impact of leaks and an explosion on habitats in the vicinity
	3	of the pipeline.
PM3-30	4	Overall, I found the EIS lacking in detail about
	5	the likelihood and effects of leaks and explosions on local
	6	communities and ecosystems and feel FERC needs to give much
	7	more consideration to this and not just the impacts of
	В	construction.
PM3-31	9	I also urge FERC to conduct more comprehensive
	10	studies of the emissions from the nearby southeast
	11	compressor station and the effects of those emissions on the
	12	health of the local community.
	13	More importantly though, I urge FERC to think
PM3-32	14	about its role in exacerbating climate change and the
	15	fracking boom destroying the community of the Marcellus
	16	shale and other gas rich areas around the country in the
	17	name of profit for the likes of Spectra Energy. By
	18	approving projects like Spectras Algonquin and Atlantic
	19	Bridge projects, FERC has an Im sorry. FERC has an
	20	opportunity and responsibility to say that our future, our
	21	health and our environment are worth far more than whatever
	22	profits Spectra will gain by their approval of these of
	23	these projects. Thank you.
	24	MS. LEE: Thank you. Speaker number eight.
	25	MS. KLEIN: Hi. Im Martha Klein, K-L-E-I-N. And

PM3-30 The safety of natural gas transmission systems and Algonquin's safety systems are discussed in section 4.12 of the EIS, including operation of the pipeline infrastructure.

PM3-31 See the responses to comments SA4-1 and SA4-9 for additional information regarding compressor station emissions and emission impact analyses.

PM3-32 See the responses to comments FA3-5, FA4-23, FA4-25, and CO7-3.

20141014-4010 FERC PDF (Unofficial) 10/14/2014 34		
	1	thank you to, FERC and Condot and the consultants and to
	2	everyone for taking the time to listen to our comments.
PM3-33	1 3	I believe that this Draft EIS contains a
F M13=33	4	foundational error and for that reason it needs to be done
	5	over before an approval is issued in an FEIS.
	6	On page 3-9 the DEIS states, life cycle
PM3-34	7	greenhouse gas emissions for coal fire electricity
	8	generation range from 36 to 47 percent higher than for
	9	natural gas fired electricity. This statement is
	10	demonstrably false. So according to the union of concerned
	11	scientist as well as numerous other scientific groups the
	12	life cycle total life cycle emission greenhouse gas
	13	emissions for coal and gas are virtually equal. How could
	14	such a thing be? You have to understand a little bit of
	15	science to know why.
	16	Methane which is of course what natural gas is is
	17	80 times more potent than carbon dioxide as a global
	18	greenhouse gas. What that means is that methane is 80 times
	19	stronger than carbon dioxide at trapping heat in the
	20	atmosphere.
	21	Another reason that global greenhouse gas
	22	emissions for coal and gas are nearly equal is that five
	23	percent of all methane fracked is leaked before it at least
	24	reaches the source to be burnt. In other words, in the
	25	process of obtaining fracking and transporting the methane

- PM3-33 See the responses to comments FA4-1 and SA1-12. We also note that a final EIS does not constitute approval of a project. After issuance of the final EIS, the Commission will consider the analysis presented in the final EIS, along with other non-environmental issues in determining whether to approve or deny the Project.
- PM3-34 Section 4.11.1.3 of the EIS presents an assessment of GHG emissions from the Project. See the response to comment FA4-23 for additional information regarding Algonquin's efforts to minimize methane emissions. See the response to comment CO7-3 for additional information regarding methane global warming potential. Also section 4.11.1.1 of the EIS identifies that GHGs, including methane, are considered pollutants by the EPA and section 4.11.1.2 of the EIS identifies how GHGs are regulated by the EPA.

PM3-34	1 1	Celsius. This is regarded as catastrophic by 97 percent of
(cont'd)	2	the worlds scientists. So with all due respect due to the
	3	very powerful global warming potential of methane due to the
	4	five percent of the very high rate of leaks that is
	5	scientifically acknowledged and due to the inherent
	6	unsoundness of fracking, please issue a negative decision on
	1 7	this project. Thank you.
	8	MS. LEE: Thank you. Speaker number nine.
	9	MS. GLIDDEN: Good evening, Suzannah Glidden,
	10	S-U-Z-A-N-N-A-H G-L-I-D-D-E-N.
PM3-35	11	As a resident living just west of here in North
1110.00	12	Salem, three and a half miles from the southeast compressor
	13	station, Im already seriously impacted from its emissions.
	14	When the wind blows in my direction and especially if theres
	15	a temperature inversion holding the fumes close to the
	16	ground. The same applies for residents living east of the
	17	compressor in Danbury and southeast to the north and
	18	northwest.
	19	A blow down is when Spectra vents the gas from
	20	one or all of its compressor units and the emissions and
	21	noise are greatly increased. Theres no regard for human
	22	life, human health as theres no notification to area
	23	residents in towns without Algonquin facilities so that we
	24	can take emergency measures of either staying indoors or
	25	evacuating the area during a blow down until the air clears.

PM3-35 See the responses to comments SA4-1 and SA4-9 for additional information regarding compressor station emissions and emission impact analyses. See the responses to comments SA4-3 and IND85-55 for additional information regarding blowdown notifications and health risks. Section 4.11.2.3 of the EIS presents information regarding blowdown noise impacts.

PM-134 Public Meetings

	1	
	. 2	We live as has been stated in a tri-state
PM3-36	3	nonattainment air quality region as classified by the USCPA
	4	and the American Lung Association gives us an F in ground
	5	ozone and particulate matter.
	6	The proposed expansion will increase emissions at
	7	the southeast compressor station including the formation of
	8	ozone to far exceed the thresholds of allowable limits in
	9	several pollutants. Some of those are nitrogen oxides,
	10	sulfur exides, velatile or organic compounds, formaldehyde,
	11	benzenes, dreadful cancer causing toxicants, some of them.
	12	This is given a green light to exceed the
	13	thresholds by the industry being able to use air credits
	14	from their other infrastructure lower in threshold limits
	15	but we are subjected to breathing air unfit for human
	16	consumption. This credit practice is negligent and should
	17	be criminally unlawful and yet its condoned by FERC,
	18	commissioners and the agencies granting air permits on the
	19	project when all should be disallowing this unacceptable
	20	practice in order to keep our health and lives protected.
M3-37	21	Weve learned as has been mentioned that Spectra
M3-37	22	plans a second expansion of Algonquin pipeline called
	23	Atlantic Bridge that is being blatantly segmented from the
	24	AIM review. The completely inadequate AIM DEIS should be
	25	withdrawn, both projects combined and a revised reissue DEIS

PM3-36 See the responses to comments SA4-1, SA4-9, and CO16-9. Also, the Project would result in overall decreases in emissions of ozone forming pollutants at the Stony Point and Southeast Compressor Stations.

PM3-37 See the responses to comments FA3-5 and FA4-1.

PM3-37 (cont'd)	1	and one that contains the many missing studies referred to
	2	in the DEIS but not yet furnished and the other completely
	3	ignored subjects critical to our wellbeing.
	4	Atlantic Bridge intends to again expand the
	5	southeast compressor station to perhaps amongst the biggest
	6	in the nation. Now, how are we to survive such future air
	7	poisoning and remain in our nearby homes? When were forced
	8	to move because our children, the elderly, those with
	9	cardiovascular and pulmonary conditions such as what I
	10	personally have and other vulnerable populations whose
	11	health is worsened by the emissions and can no longer breath
	12	the air without risk of death will you reimburse us for
	13	relocation? No. Will you stop approvals of these apparent
	14	criminal acts? No.
PM3-38	I 15	You are paid for by fees and taxes from the gas
	16	industry. You are here to give as scanty a review and as
	17	quick an approval as possible of whatever gas project is
	18	brought before you. This is a rigged against us system in a
	19	land once democratic but no longer of, by and for the
	20	people. It is now corporate tyranny over government and
	21	unbelievable greed in the face of planetary extinction. We,
	22	the people instead of promoting energy conservation
	23	efficiency and renewable energy, we, the people are being
PM3-39	24	treated as expendable and our communities are sacrifice
	25	zones for Spectra to export to other nations this proposed

PM3-38 Comment noted.

PM3-39 See the responses to comments SA4-4 and CO15-4.

2014101	14-401	0 FERC PDF (Unofficial) 10/14/2014 39
PM3-39	1	huge new supply of frack Pennsylvania gas. High as has been
(confd)	2	mentioned in radon content that will enter all the homes of
	3	consumers before export from LNG terminals in News Brunswick
	4	and Nova Scotia along Spectras Maritimes in northeast
	5	pipeline into which Algonquin feeds in Beverly,
	6	Massachusetts. Export will bring the profit in higher
	7	prices they seek at our expense.
PM3-40	8	I was once proud to say Im an American but with
5,0000 (37.0	9	people like FERC representing an industry thats ruining our
	10	water, air, forest, land and hence the food we grow, our
	11	natural resources without which we cannot survive and with
	12	methane in natural gas exacerbating global warming at many
	13	times greater an impact than carbon dioxide thats taking the
	14	whole planet fast and all innocent species with it. Im now
	15	appalled to be an American and frightened of our future.
	16	Fracking should be criminalized as the
	17	unconscionable act of ecocide that it is. And those
	18	facilitating it such as Spectra and FERCs commissioners
	19	should be jailed as the class C felonies that I believe they
	20	are. Thank you.
	21	MS. LEE: Thank you. Speaker number ten, please.
	22	MR. COLEMAN: Good evening. My name is Andrew
PM3-41	23	Coleman, C-C-L-E-M-A-N. Im a resident of Westport,
	24	Connecticut and I would urge the commission to deny this
	25	permit entirely.

PM3-40 Comment noted. See the response to comment FA4-24.

PM3-41 Comment noted.

201410	20141014-4010 FERC PDF (Unofficial) 10/14/2014 40					
PM3-42	I 1	The construction of this enlarged pipeline will				
	2	obviously directly encourage the practice of hydroelectric				
	3	fracking to extract natural gas. So my question to the				
	4	commission is will the damage caused by this increase in				
	5	hydroelectric fracking be included in the EIS? I believe it				
	6	should be obviously. And I dont see it today.				
	7	Theres five specific categories of damage that Im				
	8	referring to. The first category is the contamination of				
	9	drinking water by methane. Fracking wells align with				
	10	concrete. They almost always leak. The methane leaks into				
	11	the aqua water supply and shows up as poisonous ignitable				
	12	tap water. This is being confirmed by studies in				
	13	Pennsylvania by the National Academy of Science. In Wyoming				
	14	by the EPA and various other communities. This release of				
	15	methane into the drinking water would be indirect				
	16	contravention of the Safe Drinking Water Act were it not				
	17	that a specific exemption was put into the Safe Drinking				
	18	Water Act to exempt fracking companies from abiding by that				
	19	rule. That was an amendment that was put in by Congress in				
	20	2005 if youd like to check it.				
	21	The second category of damage that I think should				
	22	be in the EIS is the release of toxic and radioactive				
	23	chemicals. The waste water or flow back produced by the				
	24	fracking process contains numerous toxic and radioactive				
	25	chemicals. Deposal of that waste product creates a

PM3-42	1	significant environmental issue. Pennsylvanian fracking					
(cont'd)	2	operators are currently looking to export this radioactive					
	3	waste product to Connecticut among other states for					
	4	disposal.					
	5	Off Californias coast the EPA has so far allowed					
	6	cil companies to dump up to 9 billion gallons of toxic					
	7	fracking waste water directly into the ocean every year. In					
	8	June of this year, there was a raging fire in more than 30					
	9	explosions at a Halliburton fracking site in Chic. Toxic					
	10	chemicals spilled into the Ohio River and that river					
	11	provides public drinking water for residents downstream.					
	12	The third area of damage that should be included					
	13	in the EIS is the increase in greenhouse gas release. There					
	14	seems to be a lot of confusion about exactly what the effect					
	15	of natural gas is. It started as being cleaner than coal					
	16	with regard to greenhouse gas emissions but that is only					
	17	true if its burned for heat energy or electricity					
	18	generation. If it escapes into the air as happens to some					
	19	extent at all fracking wells, its 20 times at least more					
	20	powerful than carbon dioxide as a greenhouse gas.					
	21	The fourth category of damage is earthquakes.					
	22	The fracking process cracks open underlining bedrock to					
	23	release the trapped natural gas. Increased frequency of					
	24	earthquakes in Arkansas, Ohio, Texas and Oklahoma has been					
	25	linked to nearby fracking operations.

PM3-44	1	laborers in Connecticut who build natural gas pipelines here
(cont'd)	2	and throughout New England.
	3	Our members are trained in operator qualification
	4	tasks through the northeast gas curriculum, Energy World Net
	5	and Veriforce training curriculums.
	6	I do believe unfortunately Spectra Energy and
	7	FERC have been unfairly portrayed tonight because I have
	8	never been part of an industry that is so highly regulated.
	9	Ive got to know the natural gas industry as a representative
	10	of the Laborers International Union of North America over
	11	the last several years.
	12	Spectra Energy has always been an extremely
	13	responsible pipeline owner. There is absolutely no safer
	14	way to transport natural gas than through pipelines.
	15	One of the issues were facing here in New England
	16	is obviously last year New England consumers paid \$4 billion
	17	more in energy costs than more than they should have.
	1.8	Were not enjoying the same low cost of energy that the rest
	19	of the country is enjoying because of the lack of natural
	20	gas pipeline infrastructure here in New England.
	21	With the closing of Salem Harbor station with the
	22	proposed closing of Brighton Point, Somerset, Massachusetts
	23	with the closing of Vermont Yankee Nuclear station with the
	24	proposed closing of Bridgeport Harbor station and with the
	25	closing Mount Tom Call station, we have a crisis in the New

        1 England energy grid and we desperately need natural gas here
PM3-44
(cont'd)
        2 in the New England region. Its -- its no secret that its
        3 cheaper, that its cleaner and that its safer.
                      During the peak heating days last year, the grid
        5 had to use record amounts of dirty fuel oil just to keep the
        6 New England grid running. This is extremely important
            because what -- what a lot of folks dont realize is were
            facing the reality of brown outs in the New England region
            because of the crisis to the grid.
                       Either urge FERC to do everything they can to
       11 expedite the permitting of this project as soon as possible
            so that the New England can experience the energy
            renaissance that the rest of the country is experiencing. I
            know its not so much a part of the environmental impact
       15 statement but this project will also create thousands of
            good construction jobs for middle class families and folks
        17 who are in the trades and that rely on these jobs to provide
        18 for their families so that they can actually afford to heat
                       So again, tonight. Thank you so much for the
        21 opportunity to speak on this and urge for -- to get this
        22 project permitted as soon as possible. This is an extremely
       23 important project to the New England region for the energy
        24 infrastructure and the energy crisis were facing. Thank
```

20141014-4010 FERC PDF (Unofficial) 10/14/2014
                      MS. LEE: Was there anybody else who did not have
        2 a chance yet? Okay. With that the formal part of this
        3 meeting will close.
                      Im going to remind everybody that within FERC
           there is a website on www.FERC.gov. Theres a link called
        6 elibrary. From there, you can type in the docket number for
            this project, VP14-96 and you can use elibrary to gain
            access to everything on the public records concerning this
           project. Thats everything that Algonquin has filed.
       10 Everything that FERC had issued. Everything that any other
       11 agency has issued or sent in, comments made. Any other
            comments that any of the public has made as well. You can
            access any of that.
                       The transcripts for this meeting will be placed
       15 into the public record after a few weeks. However, if you
            would like copies of the transcriptions before we are able
       17 to post that, they will be available at a cost through the
            court reporter. You can please see him after this meeting
            if you are interested in that.
                      On behalf of the Federal Energy Regulatory
       21 Commission, I want to thank you all for coming here tonight.
       22 Let the record show that the Danbury, Connecticut meeting
       23 concluded at 7:42 p.m.
                        (Whereupon at 7:42 pm., the meeting was
       25 concluded.)

PROCEEDINGS MS. SUTER: Good evening. On behalf of the Federal 3 Energy Regulatory Commission or FERC, I want to welcome you 4 all here this evening for the comment meeting on the draft environmental impact statement or draft EIS for the Algonquin Incremental Market Project or AIM Project. Let the record show that the DEIS comment meeting began at 6:33 p.m. on September 15, 2014 in the town of Cortlandt, New York. My name is Maggie Suter and I am the Environmental Project Manager with the Office of Energy Projects with the Federal Energy Regulatory Commission. Also with me this evening at the front table is Karen Gentile with the Department of Transportation's Pipeline and Hazardous Material Safety Administration and I also have Jennifer Lee who is with an environmental consulting firm who has been helping FERC prepare the environmental document. From FERC this evening who can help you at any point in time, anyone wearing one of these badges is Eric Howard and Kevin Bowman and we also have Andrea Thornton and 21 Stu Buchanan. The U.S. Army Corp of Engineers, the 23 Environmental Protection Agency and the Department of Transportation's Pipeline and Hazardous Material Safety 25 Administration are participating as cooperating agencies in

the preparation of the environmental impact statement. I would like to thank these cooperating agencies for their continued assistance with the EIS review process. Kun Yan and Steve Rybar from the U.S. Army Corp of Engineers are here this evening. If you have any questions about their permitting process or role, please find them. I'm now going to briefly turn things over to Karen who will go over the DOT's process and how it relates to the review of these projects, Karen? MS. GENTILE: Good evening. As Maggie said my 11 name is Karen Gentile and I am one of the community assistants and technical services managers for the Eastern Regions Office of Pipeline Safety which is the branch of the United States Department of Transportation's Pipeline and Hazardous Material Safety Administration. I would like to thank FERC for the opportunity to 17 provide an overview of PHMSA's pipeline safety program. Upon request from FERC our office provides support to the national environmental policy analysis. PHMSA does not have authority to approve projects, issue permits or prescribe location or routing of pipeline facilities. PHMSA's jurisdiction begins once a project is 23 approved and then PHMSA and our state partners work to ensure that pipeline facilities are constructed, operated 25 and maintained in compliance with federal safety

1 regulations. If Algonquin gas transmission receives permission from FERC for its AIM project, PHMSA's Office of Pipeline Safety, in cooperation with state partners will provide the regulations for the construction and safe transportation of national gas to the pipeline to include compressor stations, metering facilities and associated piping and will maintain regulatory oversight for the safety of pipeline facilities throughout its operation. As an interstate agent working on behalf of PHMSA, the New York Department of Public Service will perform inspection on the natural gas pipeline facilities in New York as well as on Algonquin's plans, procedures and records to insure the design and construction are done in compliance with title 49 Code of Federal Regulations Part 192, the minimal federal safety standards for the transportation of natural gas by pipeline. 17 This oversight includes inspections to ensure that suitable materials are used in construction, welding is performed in accordance with industry standards by qualified welders, the pipeline is installed to the proper depth, it's protected from corrosion, it contains pressure limiting devices and is properly tested before its use. Beyond the construction process, the New York Department of Public Services conducts periodic inspections for the operation and maintenance requirements in Title 49

1 CFR 192. The operator must establish comprehensive written procedures describing the types and frequencies of monitoring to ensure the continued safety of operations. The monitoring that an operator must perform includes monitoring heat operation and adequacy of external corrosion prevention systems, inspecting and testing pressure relief devices, inspecting and operating transmission line valves, patrolling the right of way and surveying for leaks. In addition to this routine monitoring, PHMSA 11 Pipeline Safety Regulations require gas transmission pipeline operators to implement integrity management programs. These programs require periodic integrity specimens of natural gas transmission pipelines in highly populated areas. These assessments provide a comprehensive understanding of the pipeline condition and associated 17 risks. In-line inspection tools, frequently referred to 19 as smart pigs, provide detailed information about the 20 pipeline. These devices can indicate pipe deformations and 21 changes in wall thickness. By analyzing the data 22 collecting during in-line inspections, pipeline operators 23 can locate and repair the pipelines that may have been damages or deteriorated. Integrity management programs require operators

1 to detect and correct their pipelines before damage results in a leak. Well-constructed and maintained pipelines must also be properly operated. Operators must insure that 4 personnel performing operation, maintenance and emergency response activities are qualified to perform such functions. This is to minimize operator error. Operators must implement training and testing programs for employees and contractors whose performance is critical to maintaining the safety of pipeline facilities. Pipeline operators also must implement public awareness 11 programs to improve the awareness of pipelines within communities. Operators communicate pipeline safety information to local public officials, the public living along pipeline 15 right-of-way, emergency responders and excavators. The public awareness program emphasizes the importance of 17 calling 811 prior to excavating. A call to 811 provides notification to all participating utility owners, including pipeline operators to mark the locations of their facilities and monitor the excavation to ensure that facilities are not 21 damaged. Public awareness programs also include 23 information on how to recognize a pipeline emergency, how to respond appropriately and how to report the potential 25 emergency to aid the rapid response by both the pipeline

operator and community emergency responders. In addition to public awareness programs, pipeline operators are required to have written emergency 4 plans in place prior to the operation of their facilities. These programs require operators to establish and maintain liaison with fire, police and public officials, among other things to acquaint these officials and the operators with their respective responsibilities and resources in planning for emergencies. 10 These emergency plans must at a minimum, provide 11 for establishing and maintaining communication, prompt and effective response and ability of personnel, equipment, tools and materials as needed at the scene of an emergency. These plans help both the operator and emergency responders know their roles and responsibilities and available resources prior to responding to an incident. 17 If safety inspections find any inadequate procedures, or that an operator is not following their procedures, PHMSA is authorized to require remedial action, assess that civil penalty and initiate criminal action if necessary. PHMSA has reviewed the environmental impact 22 statement as it relates to pipeline safety. This document specifies that Algonquin will construct, operate and maintain the proposed pipeline to meet or exceed the minimum federal safety standards in Title 49 CFR Part 192 for the

transmission of natural gas by pipeline. Safety offense is primary mission and we 3 understand how important this mission is to your community. Again I would like to thank FERC for the opportunity to provide an overview of PHMSA's pipeline and safety program. MS. SUTER: Thank you Karen. For those of you who have not been able to attend any of our previous meetings, or know much about FERC I'm going to give you a very brief overview. FERC is an independent regulatory agency that 11 regulates the rates for interstate transmission of electricity, natural gas and oil and the citing of interstate natural gas and hydroelectric facilities. FERC has up to five commissioners who are appointed by the 15 President with the advice and consent of Senate. FERC is the lead federal agency responsible for the National 17 Environment Policy Act of 1969, or NEPA and the review of the AIM project and the lead agency for the preparation of NEPA requires FERC to analyze the environmental 21 impacts, consider alternatives and the appropriate 22 mitigation measures on proposed projects. In February, 23 2014, Algonquin gas transmission filed an application under 24 Section 7 of the Natural Gas Act. This project would 25 primarily consist of the replacement of 26.3 miles of

1 existing pipeline with new larger diameter pipeline in the same location, the installation of 11.3 miles of new pipeline, the addition of compression at six existing 4 compressor stations and the abandonment of compression at one of these compressor stations and all of this is spread throughout New York, Connecticut, Rhode Island and Massachusetts. Specifically in New York, Algonquin proposes to replace 9 and miles of existing pipeline with larger diameter pipeline in the same location and install 2.9 miles of new pipeline associated with the Hudson River crossing. Also the project in New York includes the addition of two new compressor units and the abandonment of four existing compressor units at the Stony Point compressor station. 15 It also includes the addition of one new compressor unit at the southeast compressor station. The 17 primary purpose of this meeting tonight is to give you the opportunity to provide specific environmental comments on the draft EIS prepared by FERC's staff on the project. It will help us most if your comments are as specific as possible regarding the proposed project and the 22 draft EIS. I would again like to clarify that this is a 23 project being proposed by Algonquin. It is not a project 24 being proposed by FERC. Rather the FERC is the federal 25 agency responsible for evaluating applications to construct

and operate interstate natural gas pipeline facilities. The FERC therefore is not an advocate for the 3 program. Instead, as mentioned throughout this process, the 4 FERC is an advocate for the environmental review process. During our review of the project we assemble information 6 from a variety of sources, including Algonquin, you the public, other state, federal and local agencies and our own independent analysis and field work. We analyze this information and prepare the draft EIS that was distributed to the public for comment. A notice of availability of the draft EIS was issued for this project of August 6, 3024. We are nearing the end of the comment period of the draft EIS. The comment period ends on Monday, September 29, 2014. All comments received, written or spoken will be addressed in the final EIS and are given equal consideration. I encourage you if you plan to submit comments 18 and have not, please do so here tonight, either verbally during the comment portion of our meeting or in writing using one of the forms in the back of the room. You may 21 also submit comments using one of the procedures outlined in 22 the notice of availability which includes instructions on 23 how to submit those comments electronically. If you received a copy of the draft EIS, whether 25 in paper or CD format, you will automatically receive a copy

11 1 of the final EIS. If you did not get a copy of the draft, then you are not currently on our mailing list. I apologize our mailing list is quite large and undergoing 4 constant revision. If you would like to get a copy of the final, please sign in at the attendant's table and we will make sure that you receive a copy of the final EIS. I will make note our default is to give our CD copies, so if you want a paper copy, please make sure you specify. I would like to remind everyone that neither the 10 draft or final EIS are decision-making documents. In other 11 words, once they are issued, it does not determine whether or not the project is approved. I also want to differentiate between the roles of two distinct FERC groups, the Commission and the environmental staff. The FERC staff present here tonight are part of the FERC environmental staff and we oversee the preparation 17 of the EIS for this project, particularly the next step is the final environmental impact statement. We do not determine whether or not to approve the project. After the final EIS is issued, the FERC Commissioners will make a determination on whether or not to issue a Certificate of Public Convenience and Necessity to Algonquin. The Commission will consider the environmental information in the EIS, public comments as well as a host of non-environmental information such as engineering, markets

12 1 and rates in making its decision to approve or deny the applicant's request for a certificate. There is no review of FERC's decision by the President or Congress, thus 4 maintaining for fair and unbiased decisions. Only after taking the environmental and non-environmental factors into consideration will the Commission make its final decision on whether or not to approve the project. If the Commission votes to approve the project and a Certificate of Public Convenience and Necessity is issued, Algonquin will still be required to 11 meet the certificate conditions outlined in the certificate before it could begin any construction. If approved, FERC environmental staff would monitor the project through the construction and restoration, performing inspections to document environmental compliance with Algonquin's proposed plans and 17 mitigation and the additional conditions of the FERC Now we are going to move on to the part of the 20 meeting where we will hear comments from the audience. If you would rather not speak tonight, or do not get to say 22 everything that you wanted, you may hand in written comments 23 tonight, using the comment forms found at the table in the 24 back of the room or send them in to the secretary of the 25 Commission by following the procedures outlined in the

notice of availability in the DEIS. Either way, your comments will be considered with 3 equal weight. For those of you in the back and can't see 4 all the way up here, this meeting is being recorded by a court reporter so your comments will be transcribed and put 6 into the public record. We will have some ground rules this evening. All speakers must come to the podium and use 8 the microphone both for the court reporter and for the 9 overall meeting's attendance, there are some microphones up 10 here so you need to use that microphone. You cannot yell 11 out a comment or a question from the audience because it cannot be accurately reported for the record. You have to come to the podium. To help keep this evening flowing, for those of 15 you who wish to speak you received a numbered ticket. 16 Speakers will go in their numbered order, however we do have 17 a short list of elected officials and those folks will be It will help if we can keep three, four people on 20 deck prepared to speak so we don't have to wait in between 21 speakers for you to make your way up to the podium. If you 22 are in the middle of the aisle, in the back of the room, 23 just start making your way up to the front when you 24 recognize your number is about to be called. It's like 25 when you are waiting in line at the deli.

We are allowing one ticket per person and you are 2 not allowed to allot your time to another speaker. That 3 includes if you have leftover time. Because you have a 4 numbered ticket, I ask that each speaker identify yourself and spell your name for the court reporter. Due to the length of the speaker's list we ask that you please limit your comments to three minutes in time. I have a lovely lighted timer up here that's going to help you with this. You will have, you will see roughly two minutes and twenty seconds in the green time, 11 thirty seconds in yellow, that's going to start to tell you to start wrapping up your comments and it gives you about ten seconds of red before the buzzer sounds. Most importantly everybody please show respect 15 for the person who is speaking, they only have three minutes. Do not interrupt a speaker for any reason, 17 whether you agree with what they are saying or you disagree with what they are saying, they feel their time is valued, so do not interrupt them. I'm also the official timekeeper so when you see 21 the red light go off, don't interrupt them and tell them 22 their time is up. I will stop a speaker if there is a need 23 to stop a speaker. If I find for any reason that you folks 24 are not respecting the time limit or not respective another 25 speaker for any reason, I will have to find the need to

conclude the meeting early. And I know that all of you want the opportunity to speak this evening, so let's keep this a respectful evening. Let's make sure that we keep it flowing, the faster you guys get up to the microphone in between each 6 other, the better the opportunity that all of you are going to get your opportunity to speak. So with that we are going to get going with the list. One final thing, we do 9 plan to take one ten minute break at 8:30 just because we 10 know that everyone likes to have a quick break and a leg 11 stretch, so first speaker. MS. LEE: Okay, with that the first speaker is 13 Sandy Galef. MS. GALEF: As a New York State Assembly woman representing the 95th Assembly MS. LEE: Sorry, excuse me, we need you to say your name and spell it for the record. MS. GALEF: Oh, Sandy Galef, G-a-1-e-f, New York 19 State Assembly woman in the 95th assembly district and I'm 20 here to express my deep concerns about the development of 21 the Algonquin Incremental Market Project throughout my 22 district of Verplanck, Buchanan, Cortlandt and Peekskill, 23 which is concurrent with a proposal before the New York 24 State Public Service Commission from West Point Partners for 25 a transmission system in the same area of Verplanck.

PM4-1 Comment noted.

There is no question that there are too many energy proposals for one locale in Northern Westchester, making it into a huge energy center in a very small residential community. Although you will hear from many giving testimony 6 tonight about other issues of great importance and concern, 7 I wish to focus with my limited time on the proximity of the 8 proposed Algonquin Pipeline to the Indian Point Nuclear 9 Plant. We know that the Algonquin pipeline currently runs 10 along the property owned by Entergy. But this hearing is 11 about building a whole new line very nearby and 62 percent 12 larger. In 2014 we know a great deal more about nuclear 14 plants and gas pipelines and safety than we understood in 15 the 1960's, when Indian Point was built and in 1974 and '76 16 when Indian Point 2 and 3 were built. In January of 2014, I had written to FERC and the 18 NRC expressing my concerns and asking does the NRC have an 19 opportunity to weigh in on the impact to Indian Point Energy 20 Center's safety that siting increased capacity gas pipeline 21 and electric transmission lines would have, both in 22 constructing of the line facilities as well as their ongoing 23 operations. It is not clear to me how FERC has handled their communication with the NRC and if they have requested a

PM4-2 See the response to comment FA4-25.

		17
PM4-2	1	study or official conclusion from the NRC on this very
(cont'd)	2	important question with the Algonquin Pipeline expansion and
	3	also with the recognition of the West Point Partners
	4	proposal located near the Indian Point Plant.
	5	I have heard that perhaps FERC can approve the
	6	application before you to allow Spectra to build this
	7	enormous pipeline and then, after the fact, have a review by
	8	the NRC. In my view that approach, if true, seems
	9	backwards. I ask that before any decision is made by FERC
	10	that an in depth, conclusive study the NRC be conducted to
	11	determine the impacts on the safety and operation of Indian
	12	Point. The siting of this pipeline is not in just any
	1.3	residential area but basically at a nuclear compound, one
	14	that has received more attention and critique than any other
	15	in the United States, especially after 9/11.
	16	Before action is taken by FERC, the NRC should be
	17	required to sign off on the project and conclude that the
	18	safety and health of the public in this area is not
	19	compromised in any way or impacted negatively by the siting
	20	of Algonquin.
	21	It seems so ironic to me that the NRC cannot sign
	22	off on extending the licensing for Indian Point until the
	23	New York State Department of Environmental Conservation
	24	determines that the Hudson River and the aquatic activity in
	25	the river is not impacted negatively. Yet we may be in a

Public Meetings

	9	housing market collapsed.		
	10	If you approve this expansion, once again profits		
	11	will win over people. And one again corporate expansion		
	12	will prevail over in the fact of ecological sensibilities.		
	1.3	I ask the FERC consider reviewing this expanded pipeline as		
	14	the potential weapon that it is. It's an armed weapon that		
	15	would lie right beneath our homes, our yards, our schools		
	16	and our playgrounds.		
PM4-7	17	I appeal to your sense of humanity and your	PM4-7	Comment noted.
	18	intellect, please do not place our citizens unnecessarily in		
	19	harm's way. Please say no to the Algonquin Pipeline. As		
PM4-8	20	you know, many Americans unfortunately don't trust the	DM4.0	0 d ND172 0
PM4-8	21	federal government. Many think that the federal government	PM4-8	See the response to comment IND173-8.
	22	will do whatever they want and won't listen to the average		
	23	citizen which is us.		
	24	Many people think that this is already a done		
	25	deal. Many people think that the federal government has		

		20
PM4-8	1	made up their mind and that having these formalities, these
(cont'd)	2	hearing, is just a formality further degrading their trust.
	3	Many people don't trust the federal government they think
	4	that they will choose profits over people. Many Americans
	5	think that the government will side with special interest
	6	groups, like Spectra Energy over the people. I'm asking
	7	you to restore our faith. Listen to what we are saying and
	8	do what's right.
PM4-9	9	It's wrong to have a pipeline within feet of an
	1.0	elementary school. It's wrong to put a pipeline underneath
	11	a nuclear power plant. It's wrong to put a pipeline in the
PM4-10	12	community that is already burdened with the Gypsum Plant,
	1.3	the nuclear power plant and the garbage burning plant.
	1.4	It's wrong to put a pipeline
	15	MS. SUTER: I'm sorry the buzzer, you're done.
	16	MS. COSTELLO: Okay let me just say I just hope
	17	that you will do what's right, thank you.
	18	MS. SUTER: I'm sorry. All right folks, I'm
	19	going to give two reminders now. You have to respect the
	20	time limit or we are not going to get through everybody this
	21	evening and the more time it takes in between each speaker,
	22	we are not going to get through everybody this evening,
	23	okay.
		MS. DRAPER: My name is Catherine with a "C".
	2.4	

PM4-9 See the responses to comments FA4-25 and SA1-9.

PM4-10 See the response to comment LA9-16. The gypsum plant and IPEC facilities, which are located within 0.25 mile of the proposed facilities, are discussed in sections 4.1.4 and 4.8.5.1 of the EIS, respectively.

		21
	1	Amy Paulin, P-a-u-l-i-n who was not available this evening.
	2	I appreciate the opportunity to comment on the draft
	3	environmental impact statement for this project and thank
	4	the staff of FERC as lead agency for its lengthy analysis of
	5	the potential effects of this project.
	6	I urge FERC to examine closely the impacts of the
	7	proposed project and I'm particularly concerned about the
PM4-11	8	potential negative health and safety impacts on the
	9	residents of the area near the Indian Point Energy Center.
	10	It is imperative that the Commission enforce all of the
	11	recommendations of staff contained in Section 5 of the EIS,
	12	many of which are required to be completed prior to the end
	1.3	of the draft BIS comment period.
PM4-12	14	If the project is approved, Spectra Energy must
	15	also be required to comply in all respects with the
	16	requirements of New York State law regarding environmental
	17	protection, both during the construction period and during
	18	the operation of the project. Given the proximity of this
PM4-13	19	proposed project to both Indian Point and the proposed West
	20	Point Partners transmission project, and the devastating
	21	nature of a potential accident affecting Indian Point, FSRC
	22	must do an independent and rigorous analysis of the possible
	23	hazards of locating these projects so close to each other,
	24	requiring Entergy to perform hazards analysis and Algonquin
	25	to perform an AC/DC interference study is an appropriate

PM4-11 Algonquin has complied with all our recommendations to submit various information prior to the end of the draft EIS comment period and the EIS has been revised accordingly. The recommendations of the EIS, to the extent they may be incorporated as requirements of a Certificate of Public Convenience and Necessity, would be strictly enforced by FERC staff. See also the response to comment FA4-25.

PM4-12 See the response to comment SA4-15.

PM4-13 See the responses to comments FA4-25 and SA7-4.

		23
	1	and complexity of important issues that need to be addressed
	2	in order for the proposed project to be built and run in a
	3	matter that does not have significant negative effects on
	4	the natural environment and the residents and areas of the
	5	other proposed pipeline.
PM4-18	6	I urge FERC to take the time necessary to ensure
	7	not only that all relevant issues are considered, but also
	8	that Spectra Energy will follow through on all of the
	9	recommended mitigation measures, thank you.
	10	MS. LEE: Next up Joseph Hochreiter and then I'm
	11	going to call Richard Clinchy and Kathleen Talbot to get
	12	ready to speak next.
	1.3	MR. HOCHREITER: Good evening. Joseph Hochreiter
	14	H-o-c-h-r-e-i-t-e-r. I'm the Superintendent of the
	15	Hendrick Hudson School District. I'm here representing
	16	approximately 2,500 students, hundreds of staff and
	17	thousands of residents, by way of our Board of Education of
PM4-19	18	the Hendrick Hudson School District. In fact on September
	19	10th our school board unanimously approved a resolution
	20	calling for increased safety concerns given the close
	21	proximity to our schools and further study of impacts of the
	22	project.
	23	I offer the letter sent to Kimberly Bose at FERC
	24	in DC I'll read that letter and provide it for the record.
	25	We respectfully request that the Commission

PM4-18 See the responses to comments SA2-10 and SA4-16.

PM4-19 See the responses to comments SA4-5 and SA1-9.

		24
	1	consider the impact of the proposed new pipeline through the
	2	Hamlet of Verplanck and expanded pipeline through the
	3	Hendrick Hudson School District.
PM4-20	4	Several large energy and industrial facilities
	5	presently exist in proximity to the site of the proposed
	6	Algonquin landfall in Verplanck: Indian Point Nuclear
	7	Facility, Continential Gymsum, RESCO garbage burning
	8	facility, power facilities in Stony Point and Haverstraw,
	9	and the Champlain-Hudson power cable, which FERC recently
	10	approved.
	11	Massive quantities of power, energy and pollution
	12	are concentrated in a very small area of our community right
	1.3	now. We ask how much more can one small community safety
	14	accommodate?
PM4-21	115	Algonquin's route is dangerous. It's within a
	16	mile that you will find several of our schools. An
	17	explosion of a gas line would be catastrophic. Our fire
	18	department is not equipped to handle a disaster. The
	19	project will substantially impact all who reside along the
	20	pipeline as this project cuts through Westchester to
	21	Connecticut and beyond. The safety of our schools and our
	22	students are paramount and it is in jeopardy, thank you.
	23	MS. LEE: Richard Clinchy and Kathleen Talbot and
	24	Daniel Weisfeld is next.
	25	MR. CLINCHY: Thank you very much. My name is

PM4-20 Cumulative impacts associated with the Project are discussed in section 4.13 of the EIS. We also note that on July 1, 2010 the Commission authorized the rates for the Champlain Hudson Power Express Project. However, the siting of this project is regulated by the NYSPSC. The project also required a presidential permit from the Department of Energy and a CWA and Rivers and Harbors Act permit from the USACE.

PM4-21 See the responses to comments SA1-9, SA4-5, and LA1-9.

		25		
	1	Richard Clinchy C-1-i-n-c-h-y. I'm a Councilman in the		
	2	Town of Somers and I'm here tonight to represent the town		
	3	board and the people of Somers to you.		
PM4-22	4	It's a reasonable town. We passed a Resolution	PM4-22	See the responses to comments FA4-1 and FA6-5.
	5	that called for more study for this pipeline. We didn't		
	6	call for the end of it, we didn't call for the cessation of		
	7	it, because we didn't have enough information to say let's		
	8	stop it. We don't have enough information to say let's go		
	9	on with it and that's the point tonight.		
M4-23	10	I think all of these people here, even the		
	11	workers who are here would say let's make sure that we've	PM4-23	The EIS provides an extensive analysis of safety in section 4
	12	done this safely. The first job of government of course is		
	13	the safety of its people, whether it be from outside of the		
	14	country or from inside the country, whether it be from crime		
	15	or from environmental problems. And that is why I am here		
	16	because I believe that the environmental problems associated		
	17	with this, those questions have not been answered		
	18	appropriately.		
44-24	19	The proximity of the pipeline to Indian Point		
	20	seems to most people to be incredulous, why would you do	PM4-24	See the response to comment FA4-25.
	21	that? Is it too close? People fear that in the town of		
	22	Somers even though we are not right on the Hudson River.		
14-25	23	People talk about that, they also wonder about the emission		
	24	of gases from compressor stations. We've been told that	PM4-25	See the responses to comments SA4-1, SA4-9, and CO16-9
	25	gases that are emitted right now exceed EPA limits. We	1111.20	bee the responses to comments bir. 1, bir. 3, and coro

		26
PM4-25	1	want to know if that is so and if so what are the health
(cont'd)	2	dangers associated with that?
	3	How about those that are close to elementary
PM 4-26	4	schools? There couldn't be a more population that needs to
	5	be protected more than kids. We hope that you will be able
	6	to answer those questions. People understand that there are
	7	jobs at stake. People understand that the country needs
	8	more clean energy but the first thing that we have to do is
	9	make sure that we protect the safety of people.
	10	So we say to you from the Town of Somers tonight,
PM4-27	11	complete all the studies first, don't wait until after you
	12	approve the project. Make sure all information is
	13	transparent and make sure that it is all done independently.
	14	It's the least that we can ask. It is the job of
	15	government and we are sure you will complete your
	16	responsibilities, we urge you to do so. Thank you so much
	17	for your time.
	18	MS. LEE: Next up is Kathleen Talbot. Kathleen
	19	Talbot and then Daniel you are next.
	20	MS. TALBOT: Good evening. My name is Kathleen
	21	Talbot and that's Kathleen with a "K". Talbot T-a-l-b-o-t
	22	and I'm here tonight as a long-time five generation resident
	23	of the City of Peekskill and also a member of the Peekskill
	24	City Common Council. I'm happy to see that my colleague
	25	from Somers is here. Several of his constituents are

PM4-26 See the responses to comments SA4-5 and SA1-9.

PM4-27 See the responses to comments FA4-1, FL7-4, and PM4-11.

		27]	
	1	friends of mine and have voiced a great deal of concern to		
	2	me over this issue so that's as far as this thing is being		
	3	activated. People are very concerned.		
PM4-28	4	I'm extremely concerned about this project. The	PM4-28	See the responses to comments FA4-1 and FA6-5.
	5	pipeline project is proposed for our area and I'm concerned		
	6	for many reasons. We had Spectra come before us in council		
	7	a few weeks ago and a number of people who have been working		
	8	on the opposition to this project based on the lack of		
	9	information and the questions that were going unanswered		
	10	about some of the concerns for safety and other issues, we		
	11	found their answers to be very incomplete.		
	12	And in light of all the deep concerns that I have		
PM4-29	13	along with people in Peekskill that I've spoken to and other	PM4-29	See the responses to comments SA4-5 and LA1-10.
	14	people on the council, my concern is for personal and		
	15	property safety, adequate infrastructure, damage coverage,		
	16	we don't want to be in a position of having to mop up after		
	17	this project is completed because there wasn't adequate		
	18	insurance coverage for any damage done.		
PM4-30	19	The impact on home sales, environmental concerns,		
FW14=30	20	it's going through a wetlands, it's going under Indian	PM4-30	See the response to comment LA23-21.
PM4-31	21	Point, analysis of fire equipment and safety and proper		
	22	training for our fire departments because small towns and	PM4-31	See the responses to comments FA4-25, LA1-4, LA1-9, and LA1-1
	23	cities can't afford to outfit a fire department based on		
	2.4	special needs like this.		
	25	The impact of the pipeline's proximity to the		

PM4-32	Indian Point as I mentioned and also of course the river which is a particular passion of mine and its environmental safety is of great concern to me so I urge you strongly to please do not approve this DEIS until these questions are answered and I think the man from Somers, the councilman said that the best. You know we need to have the answers to know what the safety issues are going to be and then we can move from there, thank you very much. MS. LEE: Daniel Weisfeld. And then after Daniel will be Catherine Parker and then Mary Jane Shimsky should also get ready to speak. MR. 15 PM4-33 16 17 18 19	following statement: As State Assemblyman of New York's 93rd Assembly
PM4-33 16 17 18 19	As State Assemblyman of New York's 93rd Assembly
PM4-33 17 18 19	DESIGNATION OF THE PROPERTY OF
17 18 19	District I have an interest in ensuring the health and
19	
I,	public safety of the people I represent as well as those who
20	live and work in the areas affected by Spectra Energy's
	Algonquin Pipeline Project.
PM4-34 21	First and foremost I have health concerns for New
22	Yorkers as the expansion of the compressor stations will
23	lead to significantly increased emissions which are
2.4	associated with negative health impacts. The World's
25	Health Organization also links exposure of air pollution

PM4-32 See the response to comment FA4-25. The Hudson River would be crossed using the HDD technique, which would avoid impacting the river.

PM4-33 Comment noted.

PM4-34 See the responses to comments SA4-1 and SA4-9.

		29
PM4-34		
(cont'd)	1	with neurological, cardiovascular and respiratory impacts.
PM4-35	2	Second I have safety concerns for New Yorkers as
20.00.00.00.00.00.00.00.00.00.00.00.00.0	3	the location of the E pipeline is within close proximity to
	4	the Indian Point Nuclear Facility and significant seismic
PM4-36	5 I	zone. There is currently no advance notification of
	6	operation blow downs and the gas pipeline currently holds
	7	known carcinogens.
PM4-37	8	The proposed route traverses through residential
	9	neighborhood coming within feet of an elementary school and
	10	public parks. Third I have environmental concerns for our
PM4-38	11	state as the construction and operation of the pipeline
	12	could impact our wetlands and water quality and has the
PM4-39	1.3	potential to impact the infrastructure of the municipalities
	14	as well as emergency services.
PM4-40	15	With those concerns relayed it's important for me
	16	to note that AGT has safety operated pipelines in
	17	Westchester County for more than 60 years and that the AIM
	18	Project would utilize local union labor, providing more than
	19	300 short-term construction jobs in Westchester. Therefore
	20	I suggest the recommendations to allay my concerns.
PM4-41	21	Regarding health I would like to see the result
	22	of the independent air emissions baseline assessment and the
	23	comprehensive health impact assessment. Regarding safety I
PM4-42	2.4	believe Spectra should be required to install the best
	25	available mitigation technologies and practices as outlined

PM4-35	See the responses to comments FA4-25 and SA4-2.
PM4-36	See the responses to comments SA4-3 and SA4-4.
PM4-37	Comment noted. Impacts on residences, schools, and parks are discussed in section 4.8 of the EIS. See also the response to comment SA4-5.
PM4-38	Comment noted. Sections 4.3.2.6 and 4.4.3 of the EIS discuss potential impacts and mitigation measures for surface waters and wetlands.
PM4-39	See the responses to comments SA4-7, LA1-4, and LA1-9.
PM4-40	Comment noted.
PM4-41	See the responses to comments SA4-9 and SA4-10.
PM4-42	The EPA does not regulate safety of natural gas pipelines. See also the response to comment LA5-12.

		30
	1	by the EPA.
	. 2	I would like to see the results of the assessment
PM4-43	3	of the potential catastrophic explosion on the high pressure
	4	pipeline in close proximity to Indian Point Nuclear
	5	Facility, a significant seismic zone. I oppose any
	6	construction of facilities located near schools, parks,
	7	business or residential districts.
PM4-44	8	And regarding the environment I would like to see
	9	the results of an environmental impact statement as put
	10	forth under the New York State Environmental Quality Review
	11	Act. I would also like to see the continuous monitoring of
	12	air, water, land and all other environmental impacts.
	13	I thank you kindly for the opportunity to express
	14	my suggestions. It's my hope that Spectra Energy will
	15	cooperatively refer to DEC to address these concerns before
	16	taking further action, thank you.
	17	MS. LEE: Kathleen Parker.
	18	MS. PARKER: Good evening. I'm County
	19	Legislative Catherine Parker, Catherine C-a-t-h-e-r-i-n-e
	20	Parker P-a-r-k-e-r. On August 4th of this year, the Board
	21	of Legislators for Westchester County overwhelmingly came
	22	together to support a Resolution to send to FERC and other
	23	federal agencies to call for 8 pieces of information. We,
	24	by the way, as the Board of Legislators represent almost a
	25	million people for Westchester County.

PM4-43 See the responses to comments FA4-25 and SA4-2.

PM4-44 See the responses to comments SA4-15 and LA1-6.

		31
	1	I will just go over quickly those eight pieces of
PM4-45	2	information that we are calling for. We would like an
	3	independent air emissions baseline assessment be conducted
	4	in the areas directly impacted by the proposed compressor
	5	and metering and regulatory stations, modifications before
	6	permitting and be monitored by an independent expert
	7	accepted to industry, local government officials, advocates
	8	and the public funded by Spectra.
	9	We have also asked that the best available
PM4-46	1 10	mitigation technologies and practices be required to be
	11	installed on all components of the existing and proposed
	12	expansion of the Algonquin Pipeline's compressor and
	1.3	metering stations, including an electric compressor engines,
	14	zero emission dehydrators, blow down prevention, vapor
	15	recovery units and methane capturing equipment and practices
	16	outlined by the U.S. EPA and if gas driven engines are used

PM4-60 Safety aspects of the Project are discussed in section 4.12 of the EIS.

PM4-61 Comment noted.

I Island and Pukishima we all are very nervous some times. Now you want to add a gas pipeline that we cannot say once there are humans involved it can always be an explosion. This new power plant also stores its spent nuclear fuel outside the plant. The area that an explosion could occur in could damage that and release radiation. Radiation that does not know boundaries. Let us not forget that this nuclear power plant, and now what is being proposed adding to this pipeline is located in the largest metropolitan area of the United States, with over 25 to 30 million people that can be affected by this. This has got to be the most ridiculous suggestion about enlarging a pipeline. If anything it should be taken out to protect the people of this country. Finally, and what I want the panel to please keep in mind. I will hope and I really sincerely mean this, I hope that they have contacted the Department of PM-43 Il Momeland Security because enlarging this gas pipeline in conjunction with a nuclear power plant and the possibility of an electrical power line is doing nothing but creating a bulls-eye for Al Qaeda, the perfect place to attack the United States, thank you and please stop this pipeline. MS. LEE: Next up Frank Catalina and then Thoresa Knickerbocker and Linda Puglisi. MR. CATALINA: Good evening my name is Frank

	1	Catalina, C-a-t-a-l-i-n-a. I'm the Mayor of the City of		
	2	Peekskill. I'm here on behalf of my 26,000 residents of		
	3	the City of Peekskill. Our common council passed a		
	4	Resolution just as extensive, if not more so than the County		
	5	Board of Legislators. We are very concerned with the issues		
	6	here. I won't repeat them all because you've heard enough		
	7	of them already and I'm sure you are going to hear a lot		
	8	more.		
PM4-64	4 9	I'm very concerned about the pollution coming out	PM4-64	The Project does not involve any changes to the IPEC. See the responses to
	10	of Indian Point and the project answers that were not given	1 1/14-04	comments SA4-1 and SA4-9 regarding emissions from the proposed Project
	11	to us. I lost my wife to cancer and I know five of her		facilities.
	12	best friends that died of cancer. They all great up in		
	13	Croton, something's going on and we need to look at this		
	14	very carefully.		
	15	We asked the sponsors of this, the corporation to		
constitution value	16	come in and answer some questions. They could not tell us	PM4-65	Section 4.11.1.3 of the EIS presents estimated emissions associated with Project
PM4-65	17	the limits of their liability insurance. They could not	PIVI4-03	construction and operation, as well as emission impact assessments. See also the
	18	tell us the air pollution outtake. There was no emergency		responses to comments SA4-3 and LA1-10.
	19	notification system to the local municipalities. What		
	20	could be more important than that? And as someone said, we		
	21	local governments are not equipped to handle a major		
	22	catastrophe if one should occur.		
PM4-66	23	In fact this company was reluctant to even	DIA CC	TILL 41000 - 11 - 11 - 66 - 12 - 11 - 1 - 1 - 1
	24	recognize with the disasters that occurred in California and	PM4-66	Table 4.12.3-2 provides a list of fatalities and injuries in the past 5 years associated with interstate natural gas pipelines, and include the San Bruno,
	25	elsewhere throughout the country. The draft environmental		California incident. See also the response to comment FL4-4.

		38		
PM4-67	1 2	impact statement, I've been advised had 72 issues raised and 42 of them have not been answered as of tonight, so I think that this public hearing is a little bit premature and I	PM4-67	The commentor does not provide sufficient description of the "72 issues" that
	5 6 7	would ask you to take another night to come back when all 72 issues have been addressed so we have an opportunity to look at the answers and come back to you with any of our concerns.		he believes are unresolved; therefore, we are unsure what this is in reference to. See also the response to comment FA4-1.
PM4-68	9	I'm asking you to extend the comment period for at least 180 days after all 72 of those issues have been	PM4-68	See the response to comment FA6-5.
	11 12 13	adequately addressed. Now I won't use all of my time, but I tell you I find it despicable that companies and unions would come in here and divide this community with out-of-towners and we are a union town. Peekskill is working class average salary, median salary I believe it's		
	15 16 17	38 to \$40,000.00 a year. We would not be here without our union members. My father is a union member. My brother is a		
PM4-69	18 19 20 21 22	union member and I take great offense to the fact that anybody who comes up here and speaks on this issue is somehow anti-union. We are union, we are for jobs, we are for projects, but we are also for safety first for the homeowners who live there, property values and every other	PM4-69	As discussed in section 4.9.1 of the EIS, Algonquin anticipates that about 15 to 76 percent of the construction workers would be local hires, depending on the type of activity (i.e., HDD crossings). See also the responses to comments SA4-5 and LA23-1.
PM4-70	23	thing that you have heard. The City of Peekskill will be filing as an intervener in the federal action just to make sure you guys	PM4-70	Comment noted.

		39
PM4-70	. 1	do your job so we can have another avenue for redress of our
(cont'd)	2	concerns should they not be addressed by you, but we thank
	3	you very much for your time.
	4	MS. LEE: Theresa Knickerbocker.
	5	MS. KNICKERBOCKER: Theresa Knickerbocker,
	6	T-h-e-r-e-s-a K-n-i-c-k-e-r-b-o-c-k-e-r, Village of Buchanan
PM4-71	1 7	Mayor. I'm concerned about the health, safety and welfare
PM4-/1	8	of our children in communities with this proposed 42 inch
	9	gas line. First, and most importantly, the proposed
	10	pipeline's proximity 450 feet from the Suchanan Verplanck
	11	school, way too close to our children.
	12	I respectfully request an alternative alternate
PM4-72	1.3	route from the school be studied and considered. The
	14	current proposed route comes through a residential area in
	15	Verplanck up Broadway and veers towards the school. Also I
PM4-73	16	am concerned with the proposed blow-off valve picking
1104-75	17	station at a residential area near Blakeley Avenue in
	18	Buchanan,
	19	I'm sorry the releases of gases and
PM4-74	20	contaminants will impact the health and safety of the
	21	residence, also the proximity to Indian Point Nuclear Power
	22	Plant and the plant's dry cast storage also the proximity of
	23	the pipeline, of the Buchanan Power Station and the
	24	potential devastating effect on surrounding communities and
	25	New York City.

				re are not one, but	PM4-82		

	1	We have all spent many, many hours, held many
	2	meetings to discuss and properly research the threat to our
	3	area, our hamlet of Verplanck, our Village of Buchanan to
	4	one of our school districts and to thousands of our property
	5	owners, residential and commercial that this project poses.
	6	We do not just say not in our backyards, we
PM4-83	7	evaluated this proposal and have collectively determined
	Θ	that this huge expansion and the route would be harmful to
D) (1 0 1	9	our families, harmless to our children, to the oldest
PM4-84	10	historical church in the region and to our environment. As
D1 () 0.5	11	supervisor for 23 years I and we in Cortlandt have always
PM4-85	12	been pro-jobs, pro-union jobs, but just not this job, not
	1.3	this project. We ask you and we beg you to hear us and to
	14	reject this outrageous, impactful, whole Spectra Energy
	15	Algonquin Incremental Markets Pipeline, thank you very much.
	16	MS. SUTER: Folks, I am going to remind you one
	17	more time let the speaker speak. You want to cheer for
	18	him, you want to boo him after he speaks, or she speaks,
	19	that's fine. Do not interrupt the speaker, be respectful
	20	and let them get through it, they only have three minutes.
	21	MR. FREACH: Seth Freach, Councilman Town of
	22	Cortlandt. F-r-e-a-c-h. The proposed AIM project seeks to
	23	expand the capacity of an existing natural gas transmission
	2.4	system and the existing rights of way. There's a
	25	significant portion of the project however, which would

PM4-84 Algonquin completed a historic architectural properties survey of the Project area, which was reviewed by the FERC and the New York SHPO. The Project would have no impacts on historic architectural properties, including churches, in the vicinity of Cortlandt.

See the response to comment SA4-5.

Comment noted.

PM4-83

PM4-85

require entirely new rights of way, create new impact areas and affect the quality of life, safety and security of the human environment in a disproportionate manner. The section of the project I refer to is the new crossing of the Hudson River and subsequent traversal through Verplanck and Buchanan between mile post 2.6 and mile post 5.5. Table 3.5.1-1 in the AIM EIS report looks at both the proposed Hudson River crossing route and an assessed alternative route. The report states that "total 10 number of houses potentially affected by either route would 11 be small". It even depicts in the table that either crossing 13 would affect a number of homes totally only in the single digits. DEIS arrives at the conclusion that the currently 15 proposed Hudson River crossing route is preferable because 16 in part it will only "pass near five hours". I find this 17 conclusion flawed for several reasons and I would ask the Commission to further evaluate the following three points. One -- the distance used in the table to quantify 20 the phrase passes near is 150 feet. Later in the report 21 however, the potential impact radius at this section of the 22 pipeline is quantified at over 850 feet. I would ask the 23 Commission to compel the applicant to reassess table 3.5.1-1 24 and to reassess the Hudson River crossing site selection using the potential impact radius distances.

PM4-86 See the response to comment LA7-2.

		44
PM4-87	I 1	Number two, while not counted as a house, but
FM4-67	2	still well within the 150 feet of the new pipeline section
	3	St. Patrick's Church on 11th Street in Verplanck appears to
	4	have been ignored for the purposes of river crossing site
	5	selection. St. Patrick's is discussed in the DRIS as
	6	needing further consultation with regards to construction
	7	activities but is the first and oldest Catholic church in
	8	our history Hudson Valley and has many families and
	9	parishioners who thing of the church as their religious
	1.0	home, but were not deemed relevant for the river crossing
	11	site selection criteria.
PM4-88	12	Number three, further upon its new section of
F.814=00	13	pipeline the proposed path will bring 42 inch pipelines, the
	14	potential impact radius to the Buchanan Verplanck Elementary
	15	School. This elementary school with 300 children in daily
	16	attendance along with faculty and staff, represent an
	17	additional large population ignored by the river crossing
	18	site selection.
	19	Given the fact that the land area between mile
	20	post 2.6 and 5.5 is designated as a high population area and
	21	that all structures therein, including homes, churches and
	22	schools have been designated as being in a high consequence
	23	area, I would ask the Commission to deem the Hudson River
	24	crossing site selection to be incomplete and to call into
	25	question the statement that the proposed crossing site is

PM4-87 See the responses to comments LA8-5 and LA23-19.

PM4-88 See the responses to comments LA8-5, LA23-19, and SA1-9.

1 advantageous because it will only "past near five homes" (cont'd) 2 thank you. MS. LEE: Next up is Francis Farrell and then on deck is Nick Zachary and John Testa. MR. FARRELL: Good evening I'm Francis Farrell. It's F-a-r-r-e-1-1 and I'm the Town Councilman in the Town of Cortlandt. At every one of these hearings I've attended people are far more eloquent than I speak and at every one 9 of these hearings, who are vastly more familiar with the 10 details speak and you have heard from them and will hear 11 from them. PM4-89 I'm speaking tonight to add my voice in 13 opposition to this project. When you consider a project 14 like this you are relying on a great deal of information. 15 Technical information, projections, engineer's reports, the list goes on and on. And I have to ask is there no room 17 for common sense in your deliberations. You have heard and you will continue to hear just the unsuitability of the site 19 for a project of this nature. Besides the nuclear power 20 plants, besides crossing a navigable river -- I sat at the 21 river this morning and counted dozens and dozens of 22 container cars, each one carrying over 31,000 gallons of oil 23 traveling up and down the banks of the river. It's just 24 madness. Talk about putting all of your eggs in one

PM4-89 See the response to comment FL7-4.

		46
PM4-90	1	basket. Why would you site all this stuff right into one
	2	location? It just doesn't make sense and I would ask you,
	3	I would ask the Commission to please use a little common
	4	sense. It pains me tonight to see so many union people
	5	here who seem to think the choice is between this job and no
	6	job.
	1 7	My father raised his family on a teamster's
PM4-91	В	salary and job and we have the greatest respect for union
	9	members in this town as you have heard and there is so much
	10	work to be done when you are considering our deteriorating
	11	infrastructure and all the work that could and should be
	12	done on developing an infrastructure for energy that is not
	13	reliant on finite resources like the ones we are talking
	14	about. There's much work to be done.
	15	This project offers a false choice to the union
	16	workers and I wish they would realize that and I wish that
	17	the Commission would please use some common sense in their
	18	deliberations, thank you.
	19	MS. LEE: Nick Zackhary.
	20	MR. ZACHARY: My name is Nick Zachary, I'm a
	21	trustee in the Village of Buchanan. Last name is spelled
	22	Z-a-c-h-a-r-y. I would like to express my awe and respect
	23	for anybody that got through all 919 pages I think of this
	24	document. I certainly did not but I did pick up one thing
	25	that I wanted to read. On page ES9 under major conclusions

PM4-90 Comment noted. See the responses to comments LA8-1, LA8-5, LA23-19, and FI 7-1

PM4-91 The purpose and need of this Project is identified in section 1.1 of the EIS.

		47	
PM4-92	1 1	it says, "We determined that construction and operation of	PM4-92
	2	the project would result in some adverse environmental	
	3	impacts but most impacts would be reduced to less than	
	4	significant levels". I think I know the English language	
	5	well enough to know that that is basically saying some	
	6	impacts have not been reduced to less than significant	
	7	levels and I think we need more information on that.	
PM4-93	8	I particularly am concerned about what gases are	PM4-93
	9	coming out with the natural gas, what contaminants, because	
	10	the gas that originally flowed through these lines was	
	11	natural gas that was not fracked gas which now has other	
	12	potential components that are a threat to our health so I'm	
	1.3	basically just here to express my support along with the	
PM4-94	14	rest of the Buchanan Village Board which is opposed to this	
PM4-94	15	on behalf of our residents. I am going to request that	PM4-94
	16	alternative routes are sought out and that we are not made	
	17	the sacrificial lambs to the energy gods.	
	18	We have sacrificed enough. We don't want	
PM4-95	19	another backyard, not even one. We don't want another inch	
	20	of property taken by easements and devoted to energy. We	PM4-9:
	21	have sacrificed enough over the last 50 years in our area,	F 1V14-9,
	122	thank you.	
	23	MS. LEE: John Testa and then next up is Amy	
	2.4	Rosmarin.	
	25	MR. TESTA: Good evening John Testa, Westchester	

PM4-92	The executive summary and sections 4.9 and 5.1.9 of the draft and final EIS identify that significant impacts would occur on traffic at particular locations along the West Roxbury Lateral.

		48]		
	1	County Legislator District 1, T-e-s-t-a. First let me say			
	2	I want to thank you for changing the night of this meeting			
	3	from September 11th to tonight. By changing it many of us			
	4	are able to be here who could not have been here if you had			
	5	it on the original date so thank you for considering the			
	6	change and making that change.			
	7	I sit on the County Board of Legislators,			
	8	Catherine Parker was up here earlier, who is the chairperson			
	. 9	of the Energy and Environment Committee, the Committee I sit		PM4-96	Comment noted.
PM4-96	10	on that put together with a lot of input from the community		11414 70	Comment noted.
	11	members and other members of the Board an extensive			
	12	Resolution outlining the safety concerns that we have and			
	13	that's what I was going to do tonight but since Catherine			
	14	did that I will not reiterate what she has already done but			
	15	I will say that we are concerned about the safety of our			
	16	residents and I think the best thing I can do tonight is add			
	17	to tonight, is just to discuss the human nature of this			
	18	whole thing.			
PM4-97	19	I am a lifelong resident of the City of		PM4-97	See the response to comment SA4-5.
	20	Peekskill, former Mayor, a lot of friends of mine and people			•
	21	I represented for many, many years in Peekskill and now			
	22	those I represent in the town of Cortlandt, Buchanan,			
	2.3	Verplanck and Yorktown are very, very concerned about their			
	24	families safety and rightfully so.			
	25	I have met with them in their homes. I have met			
]		

PM-191 Public Meetings

		49			
PM4-97	l 1	with them on the street. They are generally and genuinely			
(cont'd)	2	petrified of what could happen to their families and their			
	3	homes in their area so I think what we need to make sure			
	4	happens, all of these risk assessments and baseline studies			
	5	are done and all the safety requirements and all the			
	6	requests that have been made are made public and made easily			
	7	accessible to everyone as the process goes forward.			
PM4-98	1.8	It's very important that the community feels that	PM4-98	See the responses to comments FA4-25, SA4-2, SA4-9, and SA7-4.	
1114-98	9	they are being listened to and that their concerns are being			
	1.0	taken into account and their safety is being paramount to			
	11	anything else. So I want to just say that in case you did			
	12	not get a copy of it for the record, I'm going to hand in			
	1.3	the full Resolution that was passed overwhelmingly by the			
	14	Board of Legislators in West Chester for the record, thank			
	15	you.			
	16	MS. LEE: Amy Rosmarin.			
	17	MS. ROSEMARIN: Amy Rosmarin, R-c-s-m-a-r-i-n I'm			
	18	a Councilwoman on the town board of North Salem. North			
	19	Salem is next to Southeast where the compressor station is			
PM4-99	20	located. Our highest density population is on Peach Lake	PM4-99	Section 4.11 of the EIS describes air quality impacts from the compresso station. Section 4.12 of the EIS addresses safety issues.	
	21	which is right on that border, part of it is actually in	PW14-99		
	22	Southeast just a couple of miles from the compressor			
	23	station. I'm concerned for the health and safety of our			
	24	residents.			
	25	In July our supervisor sent an email to Spectra			

		50
PM4-100	ı 1	asking that Spectra notify the town of North Salem if there
	2	is an intent of doing a blow down of the pipeline and to
	3	notify us within thirty minutes following an unplanned full
	4	or partial blow down. We got a letter from the Director of
	5	State Government Affairs for Spectra stating that since
	6	Algonquin has no facilities in the town of North Salem,
	7	notification is neither required nor necessary.
	8	I am looking out for the health and safety of
	9	North Salem residents and urge Spectra to notify us. I
	10	believe that notification should be given to those who could
	11	be affected regardless of town boundaries, movement of
	12	airborne toxins are not limited by town boundaries.
PM4-101	13	Furthermore I call for an independent,
	14	transparent and comprehensive baseline air testing risk and
	15	health assessments. These assessments are necessary to
	16	protect public health and safety and are not included in
	17	FERC's DEIS. Until they are completed and reviewed by
	18	elected officials and the public, I call on all involved
	19	agencies to withhold approval permits, thank you.
	20	MS. SUTER: I'm sorry. All right, we are going
	21	to start doing ticket numbers now as that was our last
	22	elected official speaker. So look at your ticket number
	23	you are at the deli counter. We are going to start with
	24	number 1, everyone else if you are a 2, 3, 4 you are going
	25	to get in line and start getting ready.

PM4-100 See the response to comment SA4-3.

PM4-101 See the responses to comments SA4-9 and SA4-10.

51 I'm going to remind everybody one more time don't interrupt the speaker, okay. Give them the three minutes then you can do all of your cheering for, booing whatever afterwards. One other reminder we are going to do a quick break at 8:30, if we can sort of get through each person as quick as possible we will try to make sure we get through everybody, okay. Be respectful, number 1. MR. RILY: Tom Rily. T-o-m R-i-1-y. I'm a PM4-102 9 Cortlandt Manor resident as well as a Local 60 member. As a Cortlandt Manor resident, my house is only a few hundred 11 feet away from the existing 26 inch pipeline which is over 50 years old. Now all day long me and my brother and 13 sister members dig these pipes up and replace them and maintain them so we all know what a 50 year old pipe looks 15 like. It doesn't get better with age so it's either got to be done now or 10 years from now, but it has got to be done. Now as a union member, sure we want the jobs, we 18 need the jobs and absolutely. As far as the position of the 19 pipe coming up by Indian Point, I believe it's the perfect 20 spot because once you have a 42 inch gas main in place you 21 can branch off, supplement the power with a gas generation station or completely replace Indian Point with gas generation. That's all I have to say, thank you very much. MS. BRODLEY: My name is Flo Brodley, I'm a 25 grandmother from Somers. We have a pipe, oh I'm sorry,

PM4-102 Comment noted.

	52
1	B-r-o-d-l-e-y. I'm from Somers where the pipeline already
2	lies beneath condos in my Heritage Hills Development. We
3	are also blessed with a metering station, a regulating
4	station and a nearby compressor station.
PM4-103	Surely our community of seniors and elementary
6	school children has done its share in helping Spectra's vast
7	holdings while being subjected to toxic pollutants which
8	threaten our health and put us in the crosshairs of a danger
9	to our first responders.
PM4-104 1.0	Surely an independent health assessment is not
11	too much to ask of a federal agency whose mission should be
12	to protect us U.S. citizens. As a grandmother I would like
1.3	my children and my children's children to know that they can
14	have faith in the United States government to look out for
15	their health and safety, thank you.
16	MS. LEE: Number 3.
17	MR. PARKER: Good evening thank you. My name
18	is John Parker P-a-r-k-e-r. I am an environmental attorney
19	representing a number of folks in the community. In my
20	previous life I served as the regional attorney for the
21	Department of Environmental Conservation for this entire
22	region through which the pipeline passes.
23	I appreciate staff's effort, I understand the
24	challenges of environmental impact statement review, they
25	are not small. They are significant. Nonetheless, I'm

PM4-103 See the responses to comments SA4-1, SA4-5, SA4-9, and LA1-9.

PM4-104 See the response to comment SA4-10.

		53
PM4-105	1	here to say that the draft EIS is far from complete. Look
	2	into the perspective of the family I represent adjacent to
	3	the right of way in Yorktown. I've lived there for
	4	generations before the pipeline was even here and now
	5	currently identified as the terminus of the AIM project on
PM4-106	6	Stony Street, they are very concerned about their property
	7	and the public health, including air, water, contamination
PM4-107	8	releases impacting families, impacts to community parkland,
PM4-107	9	eminent domain in the construction of Granite Knolls which
	10	is a state protected parkland of regional and statewide
	111	significance.
PM4-108	12	They are also concerned about the location of the
	1.3	maintenance activities close to homes, to parklands, to
	14	families, to schools that use and enjoy them regularly.
PM4-109	15	Really the public comment period here as far as I can see is
	16	about 2 projects that perhaps should be considered as one,
	17	one to be built in 2015 and 2016 and the second in 2017,
	18	known as the Atlantic Bridge, which we will get to in a
	19	moment.
PM4-110	20	Looking straight away at the draft environmental
	21	impact statement submitted for public review on August 6th
	22	there is, and it has been mentioned already, a clear
	23	conclusion. Construction and operation will have some
	24	adverse environmental impacts. But they have been reduced
	25	to less than significant levels. The determination is

PM4-105	See the response to comment FA4-1.
PM4-106	The issues identified in this comment are addressed throughout the EIS.
PM4-107	Parkland in New York is discussed in section 4.8.5.1 of the EIS. Note that Algonquin no longer proposes a pipe and contractor ware yard in Granite Knolls Park; the section has been updated accordingly. The use of eminent domain is discussed in section 4.8.2 of the EIS.
PM4-108	Comment noted. Impacts on residences, schools, and parks are discussed in section 4.8 of the EIS. See also the response to comment SA4-5.
PM4-109	See the response to comment FA3-5.
PM4-110	Comment noted.

		54
PM4-110	1	based upon a review of information provided by Algonquin.
(cont'd)	2	Speaking for the staff we developed site specific
	3	mitigation measures that Algonquin implement to reduce the
	4	environmental impacts that would otherwise be evident by the
	5	construction and operation of the project, two very
	6	important points.
	7	It brings us to the reason why are we here?
	8	Earlier staff noted NEPA and the significant responsibility
	9	upon the federal government to solicit comments, modify and
	10	develop alternatives, and make factual corrections and
	11	explain why comments do not merit further agency
	12	consideration.
PM4-111	13	In this situation, a number of local concerns
	14	were only addressed to some degree in this draft EIS,
,	15	contaminated water discharge, wetlands issues, biodiversity
PM4-112	16	and the value of parkland, traffic and property values and
	17	socio-economic impacts including residential zoning issues
	18	where a lot of these communities are located. This is
	19	found in Section 5.
	20	No public comment however is possible at two very
	21	significant areas. One where FERC expects.
	22	MS. SUTER: I'm sorry that's it, your time is up.
	23	Everybody is getting three minutes and that's it, you can
	24	submit the rest of your comments on the record.
	25	MR. PARKER: Thank you duly noted.

PM4-111 Comment noted. Local concerns for these issues have been addressed in the final EIS, as appropriate, based on comments received on the draft EIS.

PM4-112 Potential impacts on public parkland are discussed in section 4.8.5 of the EIS.

Economic impacts associated with the Project, including property values, are discussed in section 4.9.8 of the EIS. See also the response to comment LA23-21. Transportation and traffic-related impacts associated with construction of the proposed pipeline segments are described in section 4.9.6 and appendix G of the EIS.

PM-197 Public Meetings

MS. LEE: We are on speaker number 4 so those 2 with 5 and 6 should be ready to come up next. MR. HYMAN: Jonathan Hyman J-o-n-a-t-h-a-n 4 H-y-m-a-n. Tonight is a night that presents the best in 5 what our society has to offer. We elect representatives 6 who make laws in this case, NEPA and establish Commissions, 7 in this case FERC in order to best serve the needs of the In order to insure that we have a voice and are 10 granted access to have a say in our present and future by 11 law, this public hearing commences tonight. We have this 12 right to speak, but we must live up to our end of the 13 bargain. Because it's not enough to just say we don't want it, it's junk get it out of my backyard and it's simply not 15 enough to say I need a job. This has long been established as not a way to 17 testify at a public hearing however this process and indeed 18 our entire form of government demands one thing and if this 19 demand is not met our culture as we know it crumbles. 20 Citizens need to know the score, so to speak, so as those of 21 you who take these comments tonight from us will surely 22 note, you have before you an informed and engaged public. 23 The people here are from a cross-section of 24 society, have come before you to present competent, legal, helpful and informed research and ideas that you must now

PM4-113 See the responses to comments FA4-1 and SA2-10.

PM4-113	1	consider. You will also hear tonight that you are not just			
(cont'd)	2	required to go home and review the enormous load of data and			
	3	comments you receive.			
	4	I submit to you tonight that you are obligated			
	5	morally and legally to make sure that this incomprehensibly			
	6	incomplete DEIS is a balanced document with all tests and			
	7	studies completed so citizens can comment on them. I			
	8	submit to you tonight that you are obligated morally and			
	9	legally to make sure that this incomprehensibly incomplete			
	10	DEIS is a balanced document that is not rushed forward			
	11	because of multi-billion dollar corporation has a			
	12	construction schedule to adhere too.			
	1.3	And most importantly I submit to you tonight that			
PM4-114	14	you are obligated morally and legally to make sure that this	l P	PM4-114	See the responses to comments FA4-25 and SA4-2.
	15	incomprehensibly incomplete DEIS requires that Spectra			
	16	Algonquin, requires that Spectra Algonquin pay for an			
	17	independent analysis of the risks involved in siting a 42			
	18	inch pipeline and expansion on fault lines, near a nuclear			
	19	site, in a densely population it so clearly does not deal			
	20	with some of the very serious local issues that you will			
	21	hear about tonight.			
PM4-115	22	I will be forwarding to FERC by the deadline my	P	PM4-115	See the responses to comments SA4-14 and SA4-15
	23	own very detailed documents on some local issues regarding			
	2.4	alienation that the town of Yorktown is engaging in and			
	25	conspiring with Spectra Energy to illegally avoid we believe			

		57
		<u></u>
PM4-115	1 1	review under the New York State Environmental Quality Review
(cont'd)	2	Act. Thank you very much for holding this public hearing
	3	and thank you for considering my remarks.
	4	MS. LEE: Speaker number 5.
	5	MR. BLANCH: Good evening my name is Paul Blanch.
	6	I reside in Hartford, Connecticut, my name is spelled
	7	P-a-u-l B-l-a-n-c-h. I'm an expert witness on nuclear
	В	issues unpaid. I'm a professional engineer with more than
	9	45 years addressing nuclear safety issues. I am not an
	10	attorney. I support everything Representative Galef said
	11	before with respect to her position on Indian Point and the
	12	safety of Indian Point.
PM4-116	1.3	I would like to remind FERC of its
	14	responsibilities for the issuance of the draft environmental
	15	impact statement and the final statement. If we looked at
	16	the requirements for the environmental impact statement
	17	under 18 CFR Part 380 which addresses the minimum filing
	18	requirements, we'd find a lot of issues that failed to be
	19	addressed in the report.
	20	One of those requirements it says describe
PM4-117	21	measures proposed to protect the public from failure of the
	22	proposed facilities, discuss the design and operational
	23	measures to avoid or reduce risk, describe the measures to
	24	exclude public from hazardous areas, discuss measures used
	25	to minimize problems arising from malfunctions and

PM4-116 We disagree. The application, supplements, and our independent review of the Project included sufficient information to develop and issue a draft and final EIS.

PM4-117 See the responses to comments FA4-25 and IND204-1.

		58
PM4-117	₁ 1	accidents.
(cont'd)	2	And it goes on and on in requirements, none of
	3	which I have seen addressed in the draft environmental
	4	impact statement and I think it's unconscionable that these
	5	would be totally ignored, the risks of an accident which
	6	clearly they were. The DEIS states "the purposed route
	7	would not pose any new safety hazards to the Indian Point
	В	facility." They do this and make this statement without
	9	any analysis, foregone conclusions. Indian Point like
	10	Fukashima is an accident that could result in the permanent
	11	displacement of residents and businesses within a 50 mile
	12	radius and more than a trillion dollars of social and
	13	economic damage.
M4-118	14	We also have the possible corrosion problems from
	15	the straight current generator by the proposed 350,000 volt
	16	hi-voltage DC line adjacent to the proposed high pressure
	17	gas line, again not addressed.
	18	My review of the DEIS concludes that these issues
	19	have yet to be addressed. FERC must address all of these
	20	issues and I will be supplying formal comments in writing by
	21	September 29th and I appreciate and thank you for your time.
	22	MS. LZE: We are up to number 6. Does anybody
	23	have number 6? Okay, that means 7 and 8 to get ready to
	24	go.
	25	MS. GLIDDEN: Good evening Suzannah Glidden

PM4-118 See the response to comment SA7-4.

PM4-125 See the response to comment FA4-1.

61 Cortlandt. She has written, lectured and testified extensively on the economic impacts of energy production and infrastructure development. Her comments are as follows. PM4-126 Risks and costs -- The risks and costs for communities near an expanded natural gas pipeline are not 6 addressed adequately in FERC's DEIS because it does not appear that a risk assessment was conducted by FERC. Spectra states in its own FCC filings, "there are a variety 9 of hazards and operating risks inherent in natural gas 10 transmission and storage, such as leaks, explosions, 11 mechanical problems, activities of third parties and damage to pipeline, facilities and equipment caused by hurricanes, tornadoes, floods, fires and other natural disasters that could cause substantial financial losses. The pipeline and storage assets located near populated areas, the level of damage resulting from these risks could be greater." 17 These risks and losses would be substantial. 18 Each neighboring community deserve a thoroughly and properly conducted risk assessment and FERC should provide this and it is shocking that without conducting such a risk assessment FERC's DEIS concludes "the project is not expected to have any long-term negative economic impacts". 23 The risks described by Spectra indicate that FERC's conclusion is wrong. There are significant potential long-term economic impacts associated with the AIM

PM4-126 Section 4.12.1 of the EIS discusses federal safety standards for natural gas pipelines and how these standards are applied in HCAs. Section 4.12 of the EIS also identifies the historical pipeline incident data, their causes, and the low probabilistic level of risk of an incident. See also the response to comment CO14-25.

		62
	1	project.
PM4-127	2	Property values the impact on property values
	3	has not been sufficiently analyzed. The DEIS briefly
	4	addresses these concerns, however, no mention is made of the
	5	tipping point of energy, infrastructure development in a
	6	single community or region. It is likely that with
	7	extensive development of dirty energy projects, the
	8	community will become known as the home to fossil fuel and
	9	nuclear infrastructure as opposed to a safe and pleasant
	10	community in which to raise a family.
PM4-128	11	Three negligible permanent job creation FERC's
	12	DEIS confirms that few jobs would be created by the AIM
	1.3	project. It states that after construction Algonquin will
	14	add only 3 full-time permanent workers for operations
	15	proposed in the modified facilities. The natural gas
	16	industry often highly exaggerates job creation in the hope
	17	of encouraging community leaders to approve projects.
PM4-129	18	It is time for FERC to stop rubber stamping
	19	approvals of methane gas infrastructure projects such as
	20	pipeline. The long history of FERC's approval indicates
	21	that FERC tends to side with the gas industry rather than
	22	seriously consider concerns of the populous. In the case
	23	of the AIM project, FERC appears to have ignored the
	24	economic costs of climate change.
PM4-130	25	Multiple studies have shown that it is feasible

PM4-127 See the response to comment LA23-21. We also note that about 81.5 percent of the pipeline facilities in New York would replace pipeline that was installed pre-1971. There would be no additional risk or additional pipeline infrastructure along these replacement segments.

PM4-128 Comment noted.

PM4-129 Section 4.13.8 of the EIS describes cumulative effects in the area of climate change. See also the response to comment IND173-8.

PM4-130 See the response to comment FL2-2.

		63
PM4-130 (cont'd)	1	to transition to a clean energy economy. In conclusion the
	2	AIM project is unnecessary and will result in significant
PM4-131	3	risks and costs in nearby communities. It will be costs to
	4	the larger region due to
	5	MS. SUTER: I'm sorry your time is up. Folks,
	6	I'm going to remind you again in my earlier part of the
	7	speech, I'm the timekeeper and I'm telling the speaker when
	8	their time is up, you don't need to remind them.
	9	MS. LEE: Just so we know where we are, number 8
	10	and then 9 and 10 should be ready to go next.
	11	MS. WILLIAMS: Courtney Williams C-o-u-r-t-n-o-y
	12	W-i-1-1-i-a-m-s. I am speaking to night as a resident. My
	13	home in Peekskill is 450 feet from the pipeline. I am also
	14	speaking as a parent my daughter will start Kindergarten at
	15	Buchanan Verplanck Elementary in the fall, also 450 feet
	16	from the new pipeline.
	17	By the way I am speaking as a scientist with a
PM4-132	18	doctorate in molecular biology. As a resident, as a parent
	19	and certainly as a scientist this project is unsafe,
	20	unwarranted and unsupported by the draft EIS. In the
	21	absence of the independent and transparent risk assessment,
	22	the public is unable to comment effectively on the dangers
	23	this project could pose to our community.
PM4-133	24	However, from peer reviewed scientific
M4-133	25	literature, we know that a rupture of a pipeline with this

PM4-131 See the response to comment IND99-2.

PM4-132 Safety aspects of the Project are discussed in section 4.12 of the EIS.

PM4-133 An emergency response plan is required by PHMSA's regulations and is discussed in section 4.12 of the EIS.

		64
PM4-133	1 ¹	immense size, from a distance of 450 feet would result in
(cont'd)	2	100% mortality rate for those outdoors unprotected such as
	3	our children and staff at BV school.
	4	We also know from standard operating procedure for emergency
	5	response, it is to shut off the flow of gas and wait for the
	6	fire to burn out before initiating any search for recovery,
	7	there would be no rescue.
	8	FERC and Spectra are asking our community to
PM4-134	9	accept this for our children in the absence of any data as
	10	to the risk it poses. That is unacceptable. The
	11	following issues are not addressed in the draft EIS. Will
	12	Algonquin or Commission reimburse the school district for
	13	conducting a transparent and independent risk analysis study
	14	along the lines of what is required by the California
	15	Department of Education to determine the risks to a school
	16	in such close proximity to a 42 inch high pressure natural
	17	gas pipeline at Indian Point?
PM4-135	18	A national research council in their publication
W4-133	19	Transmission Pipelines and Land Use, a risk informed
	20	approach speak to the largest and highest pressure natural
	21	gas pipelines injuries possible out to 1000 feet. To
	22	lessen risks suggest possibly land use techniques include
	23	for example establishing setbacks, regulating and
	24	prohibiting certain types of uses and structures such as
	25	schools.

PM4-134 See the responses to comments FA4-25, SA1-9, and SA4-5.

PM4-135 As discussed in section 4.12 of the EIS, interstate gas pipeline safety is regulated by the PHMSA, which reviews and considers all relevant engineering and scientific studies in the process of developing and implementing standards and regulations. See also the responses to comments FL8-2, FL8-3, and IND71-5.

PM4-135 1 Clearly the National Research Council would 2 consider allowing this pipeline in such close proximity an 3 unwise risk. According to Richard Ruprewicz, pipeline 4 engineer and President of Accufacts for fixed non-pipeline 5 facilities, hence found re-thermal flux are usually set a 6 maximum of 5 kilowatts per meter squared or lower for new 7 plants in any countries. 8 If FERC were to consider that limit in siting 9 this pipeline it would have to be over 2500 feet from the BV 10 achool. Will Algorquin provide an early admission pipeline 11 rupture heat flux versus distinct curve that can be 12 publically reviewed and defended so that parents, 13 administrators, public officials and school staff of BV can 14 see for themselves the risks? PM4-136 15 If the assessment deems the risk unacceptable, 16 the district asks is Spectra Algorquin prepared to 17 compensate the district for the loss of the school and will 18 FERC consider the outcome of such a risk assessment and 19 choose the no-build option, thank you. 19 MR. LINDBERG: Hello my rame is Erik Lindberg 10 K-r-i-k L-i-n-d-b-e-r-g. I'm a Peekskill resident and this 15 is an addendum to my previous comments. PM4-136 Your concern about the safety of the pipeline is noted. The safety of natural gas transmission systems and Algonquin's safety systems are discussed in section 4.12 of the EIS. See also the response to comment SA14-3. The nobuild alternative is discussed in section 3.1 of the EIS.

PM4-137 Comment noted. See the responses to comments IND84-20 and IND84-24.

		66
PM4-137	1	particular note are Blue Mountain reservations vicinity
(cont'd)	2	which would be completely bisected by the pipeline right of
	3	way.
	4	The DEIS states that much of the proposed
	5	pipeline routes are located along existing rights of way and
	6	in areas that are already developed and highly fragmented.
	7	The peer reviewed primary scientific literature contests
	8	this conclusion. Blue Mountain Reservation at 1535 acres
	9	does not fit any except the definition of an edge habitat
	1.0	and is not fragmented.
PM4-138	11	Using Robinson and Al published in Science 1995
	12	the definition of forest interior is more than 250 meters
	1.3	from the edge. Blue Mountain is approximately 2 point
	14	square miles or 1600 acres of interior, high-quality forest.
	15	This does not fit into the statements with the DEIS that
	16	most of this forest is edge habitat.
	17	Miller and Clemens in their 2004 plan
	18	characterized Blue Mountain as a biodiversity hub, key
	19	properties being adequate acreage, at least 20,000 acres to
	20	support species that require large expanses of habitat,
	21	relatively high quality non-degraded habitat conditions and
	22	linkages to other landscaping that's enabling movement among
	2.3	them, such dispersal and migration.
	24	At present the 6 foot right-of-way does not
	25	constitute a fragmentation barrier however the 7500 foot

PM4-138 Comment noted. However, note that the proposed work area is not 7,500 feet wide. In most areas it would be 75 feet wide. See also the responses to comments IND84-20 and IND84-24.

		67		
PM4-138 (cont'd)	1 2 3 4 5 6 7 8 9 1.0 1.1	work area will result in forest fragmentation and the introduction of edge forest right through the center of the Blue Mountain Reservation. The combination of loss of forest for the right-of-way and the introduction of edge forest along this perimeter will result in the loss of approximately 400 acres of interior forest from Blue Mountain Reservation, 400 acres is a quarter of the entire park. The project has proposed a result in loss but conversion to edge forest with approximately that much. Blue Mountain is not edge forest and is not fragmented and		
	12 13 14	supports forest interior species, thus the DEIS is counting the effects on this area are inappropriate and should be reassessed.	DM4 120	See the manager to community (2012) 1 and (2012) 9
PM4-139	15 16 17 18 19 20 21	Included in the vicinity is Dickie Brook, this brook of wetlands lies completely within the proposed work area, routinely floods during heavy rains, completely blocking Reynolds Hill and surrounding areas with muddy water. It also bisects the first brook's headwater reserve completely, the impacts of this bisection on the Byer Diversity Wetlands and Waterways aren't addressed in the	PM4-139	See the responses to comments CO13-1 and CO13-8.
PM4-140	22 23 24 25	DEIS nor are the impact to Sylvan Glen in Yorktown. In order for FERD to adequately assess the impact of this project, Algonquin must resubmit the analysis of these and other areas that have been mischaracterized as	PM4-140	Forest fragmentation and edge habitats are discussed in sections 4.4 and 4.5 of the EIS. See also the responses to comments IND84-20 and IND84-24.

1 fragmented or edge forest. They must account for the loss 2 of habitat impact on the biodiversity population therein, MS. LEE: Okay, we are up to number 10. That means 11 and 12 get ready to go. MR. VAUGHEY: Good evening, my name is Bernard Veghey V as in Victor --a-u-g-h-e-y. I'm a professional PM4-141 8 engineer. While Spectra has supposedly provided documents 9 for adding 342,000 dekatherms of supply, I question whether 10 actual replacement of the pipeline is necessary for this 11 volume. 12 Is there independent needs assessment that 13 verifies this? If so where is that report. Please produce that in the revised DEIS. If total pipeline replacement is 15 actually necessary, wouldn't a replacement in kind with a 16 new 26 inch line at the request of higher pressure be 17 sufficient for the needs of the project as submitted? If not, certainly a larger 30 inch line would be 19 25% higher pressure should handle the 13% increase in system 20 capacity from 2.6 to 2.93 billion cubic feet per day Spectra 21 is requesting. Why a 42 inch line instead of a 26, a 30 or 22 a 36 inch line. Is there something we are not being told? Future expansion export? 24 A 30 inch line will remain in service from March to November of 2016, the 26 inch line is physically removed

PM4-141 See the responses to comments SA2-2, CO15-4, CO21-17, and FL4-10.

2 one line is necessary to provide the gas to New England. 3 Therefore it appears the 26 inch line and now the 42 inch 4 line is needed only for seasonal and/or peak uses. 5 Why doesn't the DEIS review other peaking methods, like 6 storage in New England? Closer to the demand with less or 7 no impact damage to New York. 8 What are the other options? What is the real 9 intention of the larger 42 inch line? Since the existing 26 10 inch line from Stony Street to Southeast is not being 11 replaced, what can the 60 year old line handle can a 60 12 year old line handle the increased pressure and capacity of 13 the AIM project? Portions of the 26 inch line appear to be 14 left in place with the even higher capacities of the 15 Atlantic Bridge project. How much capacity can the existing 16 26 inch line actually handle? Where is that information in 17 the reports and on the DEIS? 18 Why specifically does the existing 26 inch line			69

PM4-148 (cont'd)	1	upon the community as well as a complete EIS. All open
(cont a)	2	items musts be fully vetted prior to the issuance of
	3	permits, the scale of this project demands it. My life is
	4	on the line.
	5	If I can just turn the agenda for the petition
	6	signed by 40 some odd people who cannot attend tonight.
	7	MS. LEE: Okay we are up to speaker number 12
	8	which means 13 and 14 should get ready next.
	9	MS. SUNSHINE: Hi my name is Jennie Sunshine,
PM4-149	1.0	that is spelled J-e-n-n-i-e- Sunshine S-u-n-s-h-i-n-e. I
	11	am making these comments under protest. FERC's approval
PM4-150	12	process and draft environmental impact statement or DEIS are
	1.3	fundamentally flawed and I demand that the DEIS be withdrawn
	14	and that a supplemental draft environmental impact statement
	15	be submitted for public review only after all relevant
	16	parties have submitted all necessary information.
	17	My husband and I own our own home four blocks
	18	away from the pipeline. My children play at the
	19	playground, at Willow Pond and Curry Street in Yorktown
	20	Heights where the pipeline and its venting pipes are
	21	present. And my children attend Thomas Jefferson
	22	Elementary and Yorktown Heights, a mere 400 feet from the
	23	pipeline so I and my family are directly affected by this
	2.4	project.
	25	I also have a comment regarding the DBIS. In

PM4-149 Comment noted.

PM4-150 See the responses to comments FA4-1, FA6-5, and SA1-12.

		73
PM4-151	1	Section 4.3.2.1 incomplete storm water information. As
	2	noted in this section of the DETS the construction ware yard
	.3	is located within the Croten watershed, a part of the New
	4	York City's drinking water supply which provides drinking
	5	water to 9 million people. The DEIS also notes that the
	6	required storm water pollution prevention plan, SWPP for
	7	this parcel has not yet been submitted.
	8	Consequently in the absence of the SWPP there is
	9	no way for the public to intelligently comment on the
	10	potential negative impact of storm water run-off from the
	11	construction ware yard or the proposed launcher receiver
	12	facility or pigging station, also on town-owned parkland
	13	within the watershed.
PM4-152	14	It should also be noted that deforestation of 15
	15	plus acres of land will exacerbate the storm water run-off
	16	problem, thank you very much.
	17	MS. CURRAN: Una Curran. U-n-a C-u-r-r-a-n. I
PM4-153	18	am requesting that the clause of the public comment period
	19	for the draft EIS currently scheduled for September 29th be
	20	extended for 9 months. My comments this evening to protest
	21	the DBIS is fatally flawed and inadequate. How on earth
	22	can the public possibly comment on 42 issues that you
	23	haven't even addressed? It's insane. I just don't get it.
	24	How can you have published a final EIS statement December
	25	19, 2014 when you haven't even heard what we had to say this

PM4-151 See the response to comment SA14-1.

PM4-152 The EIS acknowledges this potential impact and in section 4.5.4.1 of the EIS states, "The removal of mature trees and other vegetation could also result in secondary impacts such as increased erosion." See also the response to comment SA14-1.

PM4-153 See the responses to comments FA4-1, FA6-5, and FA4-25. We also note that the Energy Policy Act of 2005 requires the Commission, as the lead agency for NEPA review of interstate natural gas facilities, to set a schedule for the NEPA document. This aids other agencies with permitting requirements to complete their reviews within the regulated timeframes. A revised notice of schedule was issued on December 10, 2014 identifying the final EIS would be issued on January 23, 2015.

		74
PM4-153	1	evening?
(cont'd)	2	Can someone explain that to me please I don't get
	3	it? How do you have a final date when you haven't even
	4	addressed the deficiencies in your draft EIS? The fact
	5	that the Indian Point Energy Center had an assessment is not
	6	included in this draft EIS alone should make you withdraw
	7	this draft. That is a major issue and it needs to be
	8	addressed, we need to have time to review it.
M4-154	9	By Spectra's own admission they do not carry
	1.0	enough insurance coverage to adequately cover infrastructure
	11	damage during construction or liability coverage for any
	12	type of disaster post construction.
	1.3	By allowing this lack of adequate insurance you
	14	are asking the taxpayers and residents to become the
	15	guarantors of this project, this is not acceptable. We
	16	don't want this pipeline and we are not footing the bill
	17	when something goes wrong. The proposed plans place the
	18	pipeline within 450 of BV Elementary School is unacceptable,
	19	unconscionable.
M4-155	20	The 1950 U.S. Census data shows Westchester
	21	County population of 625,000 people. The 2010 Census shows
	22	a population of 949,000 people, that's a 50% increase.
	23	Isn't it time we talked about decommissioning these
	2.4	pipelines instead of expanding them, given the population
M4-156	25	increase. The health and safety issues need to be examined

 $PM4-154 \qquad \ \ See the responses to comments SA1-9 and LA1-10.$

PM4-155 See the response to comment IND101-6.

PM4-156 See the responses to comments SA4-1 and SA4-9 for additional information regarding emissions from aboveground facilities and emission impact analyses. See the response to comment LA1-6 for additional information regarding air quality monitoring at compressor stations.

		75
PM4-156 (cont'd)	1	very closely as we already have a higher than normal asthma
(conta)	2	rate.
	3	The emissions from the compressor stations need
	4	to be more closely monitored and regulated in order to
	5	preserve air quality and mitigate health issues that stem
	6	from VOC's and toxins being released into these active
	7	stations.
PM4-157	8	In conclusion I say to FERC, the Commissioners of
	9	FERC my life and that of my meighbors, their children and
	10	all communities along this proposed project, our lives are
	11	not disposable. We will not be collateral damage so that a
	12	multi-billion dollar company can make money, ruin our
	1.3	beautiful historic Hudson Valley and wreak havoc upon our
	14	health and safety, thank you.
	15	MS. LEE: Okay we are at speaker number 14, so 15
	16	and 16 should be ready to come up next.
	17	MS. PISHA: Okay my name is Gale Pisha G-a-l-e
	18	P-i-s-h-a and I live in Rockland County. I'm speaking
	19	tonight for Sierra Clubs Lower Hudson Group which has about
	20	4,000 members in Westchester, Putnam and Rockland, the
	21	counties through which the AIM pipeline would run in New
	22	York State.
PM4-158	23	Sierra Club requests that FERC withdraw its
	24	flawed DEIS, complete all required studies and conduct the
	25	health and safety impact assessments requested by county

PM4-164	Section 4.11 of the EIS describes air quality impacts from the compressor station. Section 4.12 of the EIS addresses safety issues.
PM4-165	See the response to comment CO7-6.
PM4-166	See the responses to comments FA4-1, FA6-5, and SA2-10.

PM4-167 Comment noted.

		78			
PM4-168	1	sufficiently protect threatened or endangered animal species	PM4-16	58	See the responses to comments CO21-36 and PM3-29. Potential impacts on threatened and endangered species are discussed in section 4.7 of the EIS.
	2	here.			threatened and endangered species are discussed in section 4.7 of the Elis.
PM4-169	3	AIM follows the most dangerous route for its huge			
	4	42 inch diameter high pressure pipeline, 1500 feet from the	PM4-16	59	See the responses to comments FA4-25 and SA4-2.
	5	Indian Point Nuclear Plant which is sited on 2 earthquake			
	6	faults and houses 40 plus years of highly radioactive spent			
	7	fuel, mostly in relatively unsecured spent fuel pools.			
	В	A gas pipeline explosion or fire 1500 feet from			
	9	Indian Point could cause us a long-term disaster of			
	10	catastrophic proportions, reaching as far as New York City			
	11	and it's 8 and 1/2 million people and clearly explosions and			
	12	fires in these large pipelines are not rare with 70 such			
	13	incidents, significant incidents reported in 2013 by U.S.			
	14	Pipeline Hazardous Material and Safety Administration for			
	15	these large pipelines.			
	16	Our nation has always espoused the credo that our			
PM4-170	17	children are our future but the path of this pipeline passes	PM4-17	70	See the responses to comments SA1-9 and SA4-5.
	18	within 450 feet of two elementary schools, putting them well			T
	19	within a high consequence area. That means a pipeline			
	20	in a pipeline rupture unsheltered children and adults would			
	21	be incinerated within 90 seconds, 100% mortality.			
	22	Many homes here have the same or worse risk with			
PM4-171	23	some homes 200 feet from the pipeline. A second peril of			
	24	AIM is its assault on our air. Thousands of tons of toxic	PM4-17	71	See the responses to comments SA4-1, SA4-9, and CO16-9.
	25	emissions will be released from compressor stations in SUNY			

		79
PM4-171	1 1	Point and Southeast with four toxins, including known
(cont'd)	2	carcinogens, significantly over EPA thresholds. Health
PM4-172	3	impacts include heart disease, respiratory illness, elevated
	4	blood pressure and increased risk for cancer.
PM4-173	5	This is legal since AIM can buy credits from
	6	areas with cleaner air but it is immoral to degrade our air
	7	which will certainly result in increased illness, especially
	8	in our children who are susceptible, more susceptible to
	9	toxins. There's something fundamentally wrong with a
PM4-174	10	government so disinterested in the health and safety of its
	11	people which permits this risk to people to work to afford
	12	the American dream, a safe home to raise their children in a
	1.3	healthy setting.
	14	There is something very wrong.
	15	MS. SUTER: Sorry your time is up.
	16	MS. CLAIR: Okay.
	17	MS. LEE: Yeah so somebody dropped off ticket 17
	18	so that's why I'm not going to be calling it.
	19	MS. SUTER: All right, so it's 8:30 we are going
	20	to do a really quick break because we have to take a quick
	21	bathroom break essentially so we are going to be back here
	22	by 8:40.
	23	
	24	
	25	

PM4-172 Comment noted.

PM4-173 See the responses to comments SA4-1, SA4-9, and CO16-9.

PM4-174 Comment noted.

MS. SUTER: All right let's go folks, find your seats, number 18, number 18 you're up at the mic. 19, 20. Folks we are going to get started here so if you 4 are still taking your seat do it quietly so we can let this guy start talking. All right, one other thing before you start speaking sir, in order to get through this very extensive list and make sure that all of you receive your opportunity to speak this evening if you are just essentially reiterating something that someone else said before you, I encourage you to say that and just that. You know just say I am you know supporting so and so's comments of earlier this evening and that will help us get through everybody who may have a more unique issue or a concern that they want to get on the record. All right, number 18. MR. WAGNER: Well thank you, I'm Justin Wagner 17 W-a-g-n-e-r. I'm a resident here in the town of Cortlandt and also a candidate for New York State Senate in this district. But today I am here to speak as a father and a husband and a father of a three year old girl who plays in a 21 playground in Buchanan just feet from where the proposed 22 pipeline extension will go. I'm speaking as a Cortlandt resident who doesn't PM4-175 24 understand why my small community is being asked to bear so 25 much risk when it comes to environmental and health risks

PM4-175 The impacts of the Project, including health and safety, are addressed throughout the EIS.

		81
PM4-176	1	and I'm here to request that FERC extend the public comment
	2	period and that the draft EIS be revoked and amended to
į	3	address the issues raised today.
PM4-177	4	Our communities here in northern Westchester
	5	don't agree on everything. It's not often you find
	6	Yorktown, Peekskill, Buchanan, Somers all singing the same
	7	song, but today we are. Our communities here in northern
	8	Westchester agree on the need to come together and oppose
PM4-178	9	the fast tracking of this project, specifically there is no
	1.0	definition, there's no definitive indication of where the
	11	pigging station for this project will be.
PM4-179	12	The pig station is where the pipeline will be
	13	between literally a substance called black powder oxide is
	14	clean from this pigging station. The black powder oxide
	15	due to radon will include radioactive lead 210, Polonium 210
	16	and other radioactive materials. If these substances were
	17	to make it to our water, our air or our soil, the
	18	consequences could be disastrous. The approval of this
	19	environmental impact study without any definition as to what
	20	community, what neighborhood, what block will have the
	21	pigging station is unacceptable.
	22	We need to know, we deserve to know. Now in
	23	fact Spectra initially proposed the pigging station in
	24	Yorktown. It was attempted to be rammed down the throats
	25	of residents but an outcry of moms, residents and scientists

PM4-176 See the response to comment FA6-5.

PM4-177 Comment noted.

PM4-178 See the responses to comments FA6-5 and SA2-10. Pigging facility locations are provided in table 2.1.2-1 of the EIS.

PM4-179 See the responses to comments SA4-4 and LA5-18.

		82
	1	came together to educate the public about the danger of
	2	placing this pigging station right in the middle of town.
PM4-180	3	And enough members of the town board, not all of
	4	them, but enough of them stood with the residents and
	5	stopped the granting of this land from Spectra Energy to the
	6	pigging station. So now the question remains, if not your
	7	town, where will this pigging station be located? We
	8	deserve to know.
PM4-181	9	I also want to echo Assembly Woman Galef's
	10	comments about the need that FERC have the Nuclear
	11	Regulatory Commission examine the safety of the pipeline
	12	pipe in relation to Indian Point. The public also deserves
	1.3	to know about that. Once again I ask FERC to not approve
PM4-182	14	the DEIS before these questions are answered because this is
	15	not hyperbole, our communities, our lives and potentially
	16	everything that we cherish in these communities is on the
	17	line, thank you.
	18	MS. LEE: 19 speaker 19 go ahead, 20 and 21 up
	19	next.
	20	MS. COLE: Good evening my name is Doreen Cole
	21	D-o-r-e-e-n C-o-l-e. I'm a lifelong resident of the town
	22	of Cortlandt residing at 159 Highland Avenue in Verplanck
	23	for the past 26 years with my husband Steven and our two
	2.4	children. Our family like many others in the area has roots
	25	there for more than three generations. I'm here tonight as

PM4-180 See the response to comment PM4-178.

PM4-181 See the response to comment FA4-25.

See the response to comment FA4-1.

PM4-182

		83
PM4-183	1 1	a member of the community task force that opposes this
41111100	2	project.
PM4-184	1 3	Others here tonight address grave concerns for
PM4-184	4	health and environmental impacts of this project but given
	5	time constraints I want to reiterate my concerns about the
	6	location. I ask you FERC please do not move forward with
	7	the permitting process for this dangerous infrastructure.
	8	Have you been to Verplanck? I assume you have,
PM4-185	9	so let me tell you a little bit about it. Verplanck is
	10	only one square mile in size and surrounded by water on
	11	three sides. We don't have postal mail deliver or a gas
	12	station. What we do have in Verplanck is safe streets and
	13	sidewalks for walking, running, biking, pushing a stroller.
	14	
	15	We have the oldest Roman Catholic Parish in the
	16	Hudson Valley and a professional volunteer fire department.
	17	We have boating, fishing, crabbing in the Hudson River and
	18	we are a winter home to bald eagles. It's been the right
	19	place for my husband and I to raise our children and it's a
	20	great place for people to visit. It's not the right place
	21	to buy a monstrous new 42 inch high pressure pipeline for
	22	gas that will be exported to pad the pockets of the private
	23	company.
	24	The location of the new and monstrous high
	25	pressure 42 inch diameter transmission pipeline is too close

PM4-183 Comment noted.

PM-227 Public Meetings

		85
	-	
	1	MS. CCLE: Diminish its value and reduce the
	2	quality of life.
	3	MS. LEE: Number 20, speaker number 20.
	4	MS. MCDONNELL: Good evening, my name is Susan
	5	McDonnell, S-u-s-a-m M-c-D-c-n-n-e-l-l. I am a founding
	6	member of SAFE also and I can easily repeat just about
	7	everything that was said here tonight but instead I'm going
	8	to paraphrase the comments of a friend who is an attorney
	9	and living and practicing in Westchester County. She is
	10	unable to attend the hearing tonight but she is primarily
	11	interesting in the insurance and mortgages.
PM4-192	12	"The majority of the AIM impact by segments are
	1.3	replacement of an existing pipeline in the same location and
	1.4	would not be encumbered by a new pipeline easement.
	15	According to FERC the AIM Project would not negatively
	16	impact property values outside the pipeline rights of way or
	17	above ground facility boundaries. The fact that an
	18	expanded pipeline can fit into an existing pipeline easement
	19	fails to establish the project would not affect property
	20	value and property value is impacted by risk assessment
	21	which is not considered here.
PM4-193	22	According to the Pipeline Safety Trust, the
	23	development of large pipes increases risks to neighborhood
	2.4	and businesses located near the pipes and further the past
	25	performance record cannot predict the outcomes associated

PM4-192 See the responses to comments LA23-21 and PM4-126.

PM4-193 As discussed in section 4.9.8 of the EIS, insurance advisors consulted on other natural gas pipeline projects reviewed by the FERC within the same vicinity of the proposed Project have indicated that pipeline infrastructure does not affect homeowner insurance rates or premiums. See also the responses to comments LA1-10, LA23-21, and IND85-51.

1 with different future risks. The fact that the EIS ignores 2 the interrelationship between the new risks and the fair 3 market value of property, property value underscores a 4 critical deficiency in the report and still needs to be 5 addressed and resolved." Another quote, "homeowner's insurance rates are 7 unlikely to change due to the construction and operation of 8 the proposed project. Contrary to FERC's conclusion, the 9 Pipeline Safety Trust stated in July 2014 that 'recent and 10 scheduled evidence suggests that insurance underwriters are 11 reacting to the presence of transmission lines near residential properties and raising rates in some instances, 13 suggesting that insurance might not be available to new buyers of a property whereas a transmission line was 15 recently constructed.'" Spectra confirms that it is not fully insured 17 against all risks and losses and that should any materialize 18 it could have an adverse effect on their financial 19 condition. FERC is urged to reject this project because it 20 would benefit Spectra while placing an unlimited and 21 unjustifiable financial burden with respect to spilled operations on New York home owners and tax payers, thank MS. LEE: Number 21. 22 and 23 should get ready 25 to go next.

		87	7			
	1	MR. RAVNITZKY: My name is Jerry Ravnitzky				
PM4-194	2	J-e-r-ry R-a-v-n-i-t-z-k-y. I'm one of the founding	PM4-194	See the response to comment FA6-5.		
	3	members of SAFE and from the start this whole process seemed				
	4	to be developed in secrecy. We found out about the scoping				
	5	session by accident a few days before it was to occur and				
	6	very few people in the community had gotten notice, many of				
	7	the panel boards, the county people didn't know about it so				
	8	it started out in secrecy and seems to have continued in				
	9	secrecy. The Atlantic Bridge Pipeline seems to be part of				
PM4-195	1.0	this whole process, was also something that we had to find	PM4-195	See the response to comment FA3-5.		
	11	out because it wasn't publicized and that is also something				
	12	segmentationally is not legal and I think the FERC should				
	13	not allow this to happen.				
PM4-196	14	It's been mentioned that there's no risk	PM4-196	The impacts of the Project, including health and safety are addressed throughout		
	15	assessment, health impact assessment, no baseline testing		the EIS.		
	16	available on water and so forth, we need these studies. We				
	17	don't need Spectra's studies that start with a conclusion				
PM4-197	18	and without any basis or facts. Every year we hear about	PM4-197	Constitution of the constitution of the contract CAA 5 CO14 25 and FI AA		
	19	accidents. Almost every day it's in the newspapers, there	PW14-197	See the responses to comments SA4-5, CO14-25, and FL4-4.		
	20	are accidents occurring from pipelines where Spectra is not				
	21	innocent of this, they have had numerous accidents as well				
	22	as other companies and this is truly reticent of and $\ensuremath{\mathbb{I}}$ won't				
	23	go into details because it's been mentioned by the others,				
	24	but these pipelines are not mentioned for gas as a bridge				
	25	fuel, at least they talk about it that way but it's not.

PM4-199 See the responses to comments FA4-1 and FA6-5. Also, all information and studies used to support the EIS are included on the record for this Project and/or are identified in the references appendix of the EIS.

PM4-200 Comment noted.

the AIM project because of many reasons, the region's energy 2 infrastructure and it needs to be updated. This project 3 will create construction jobs and the construction industry 4 in the last five years at least has gone through a rough 5 period and with 15% of the men and women here, like I said 6 over the past five years are on the bench, this would be a real big boost to the construction industry. It will also provide cost effective energy for 9 the region. This AIM project will put people to work in 10 the Hudson Valley like I said. The men and women that are 11 here tonight from the operating engineers, the laborers and 12 the teamsters, they truly do have their jobs on the line 13 like their shirts read and I just want to take issue with 14 something that was mentioned about an hour, an hour and a 15 half ago. Someone said that they had a problem with a bunch 17 of cutsiders being bussed in here today that is just not the 18 case. The men and women that are here today are from the 19 Local 60, Local 1000, Local 137, Local 754, Local 456, Local 20 825, you get the picture and I'm sorry if I left anybody out 21 here but there is a reason that local is in the name. These are men and women that live in the area 23 that work in the area, they own in the area, they rent, they 24 pay property taxes, they buy services all in this area, not 25 driving in from Rochester and Syracuse to work, these are

		90
PM4-200 (cont'd)	1	local people. And it goes a little bit beyond paychecks.
(cont a)	2	It has, definitely has an opportunity to increase the tax
	3	basis for cash strapped municipalities.
	4	Just like all of us who live in the region, we,
	5	you know it doesn't matter what side of the aisle you are on
	6	here, we all want to make sure that the pipeline is
	7	constructed safely and operates with minimal environmental
	В	impacts. Our associations certainly work closely with the
	9	regulators in the New York State Department of Environmental
	10	Conservation as well as the United States Environmental
	11	Protection Agency. We have worked with them for many
	12	years.
	13	These professionals will definitely insure that
	14	the project design, permits construction and ongoing
	15	operation are all in compliance with their agency standards
	16	and regulations. In order for the AIM project permits to
	17	be approved it needs to go through a myriad of regulations,
	18	national ambient air quality standards among one of them.
	19	Algonquin must maintain and comply with this
	20	title 5 air permits that include all requirements in the New
	21	York State Implementation Plan and short performance
	22	standards in section 112 of air toxic standards. It will
	23	require annual emission inventories, annual compliance
	24	certificates and semi-annual periodic monitoring reports.
	25	In conclusion I just want to say that

		91
PM4-200	1	construction is your Council and Building Contractors
(cont'd)	2	Association urges FFRC to support Spectra Energy's permit.
	3	Thank you.
	4	MS. SUTER: I'm sorry your time is up.
	5	MS. LEE: 23.
	6	MR. O'CONNOR: I'm Aidrian O'Connor from Lake
PM4-201	7	Purdys, New York A-i-d-r-i-a-n C-c-c-n-n-o-r. I am here to
	8	represent the over 26,000 people that have signed their
	9	names on this Petition which I plan to leave with you today.
	10	The statement of the Petition is the Algonquin Pipeline
	11	expansion represents imminent danger to the safety and
	12	health in New York, Connecticut, Rhode Island and
	13	Massachusetts. You must reject Spectra Energy's permit and
	14	endorse the no-build option.
	15	These 26,000 plus people understand the increase
	16	in risk that this project represents to the health and
PM4-202	117	well-being of their families. They also understand that
	18	the number of permanent jobs this pipeline would create is
	19	abysmal and that far more jobs can and are being created in
	20	renewable technologies.
	21	Westchester County needs clean, renewable energy
	22	and clean, renewable jobs. The AIM Project as proposed
	23	assures us of a dirty and dangerous future and it is FERC's
	24	duty to either reject the impossibly incomplete DEIS that
	25	has been submitted or simply endorse the no-build option.

PM4-201 Comment noted.

PM4-202 Comment noted. Potential employment associated with the Project is assessed in section 4.9.1 of the EIS. See also the response to comment FL2-2.

Thank you. MR. MOSKOWITZ: Hello Paul Moskowitz, 3 M-o-k-o-w-i-t-z. I'm a resident of the town of Yorktown and 4 I have a PhD in nuclear physics. I am amazed and appalled PM4-203 5 that Spectra Energy has failed to recognize the buildup of 6 radioactive materials on the insides of its pipeline. They have admitted to the presence of radon gas. Well the radon gas has a half-life of 4 days and when it 9 decays it just doesn't go away, it leaves behind radioactive 10 decay products notably Lead 210 and Polonium 210, these two 11 elements are cancer causing agents and have been recognized as such by the U.S. EPA. The public is exposed to a risk here that is the lead and polonium radioactive particles are embedded in the 15 corrosion on the inside of the pipeline, the so-called black 16 powder. When the pipeline is cleaned through the pigging 17 operation, where all segments are removed from the ground 18 and placed in a construction yard or there are blow downs, 19 either deliberate or accidental, that black powder can be 20 vented into the atmosphere carrying with it the radicactive 21 lead and polonium. I just can't believe that a responsible federal agency would allow Spectra to expose the public to this risk, thank you. MS. LEE: We're on speaker 25, somebody dropped 25 off 26, so number 27 should be ready to go.

PM4-203 See the response to comment SA4-4.

	93		
	,		
	SPEAKER: I'm 25.		
	MS. LEE: 25, I've got 26, 27 will be next.		
	MS. VAN DOLSEN: Hello thank you for holding		
	this hearing. My name is Susan Van Dolsen S-u-s-a-n V-a-n		
	D-o-l-s-e-n. The draft environmental impact statement that		
(we are here to address tonight uses a lot of paper. It		
	appears comprehensive doesn't it? Looks can be deceiving.	PM4-204	See the responses to comments FA4-1 and SA1-12
PM4-204	FERC's approval process and the draft environment	FW14-204	See the responses to comments PA4-1 and SA1-12
2	impact statement are fundamentally flawed. I demand that a		
1.0	supplemental draft environmental impact statement be		
1:	submitted for public review only after all relevant parties		
12	have submitted all the necessary information.		
PM4-205 1	At that time a new 90 day public comment period	PM4-205	See the response to comment FA6-5.
1.	should commence. As you saw over 26,000 people will have		
1.	signed a Petition on our website, SAPE an all-volunteer		
1.0	grass-roots organization with no affiliation and no funding.		
1.	Over 30 elected officials who have signed on to the letter		
10	asking FERC to withdraw this flawed document. Why are we		
1:	all concerned? Why are all the local elected officials and		
20	residents rejecting this?		
2:	Firsts of all it is because of all the missing		
23	information that is not in this very large book. First of		
PM4-206	all, that I can point out is the final conclusion on state's	PM4-206	See the response to comment FA4-25.
2	related conflicts with Indian Point which has been mentioned

FM14-210	16	Village of Buchanan and we stand in complete opposition to		1111. 210	Comment notes	
	17	the proposed location of Spectra's Algonquin Pipeline.				
11	18	Among the other concerns expressed this evening,				
PM4-217	19	and I'm not going to repeat them, our primary concern is				
	20	public safety and security. In view a 42 inch diameter gas		PM4-217	See the response to comment CO7-6.	
	21	pipeline is an attracted potential and permanent terrorist				
	22	target that would potentially compromise with devastating				
8	23	consequences to the area that's impacted.				
PM4-218	24	Gas line explosions are not uncommon in the				
1 814-216	25	United States as mentioned earlier. When they do occur,		PM4-218	Section 4.12.3 of the EIS discusses impact on public safety.	
				1 14-210	Section 4.12.5 of the Lib discusses impact on public safety.	
l			1			

PM4-218	1	they are very volatile and the danger is immediate. From
(cont'd)	2	the thermal blast shock created by the explosion, the
	3	radiation that's release and the resulting flames and
	4	surface temperatures that can reach 200 degrees making first
	5	responder's efforts to extinguish the flames fruitless until
	6	the gas burns off and the shutoff value is secured.
	7	Reference if you will, San Bruno, California
	8	September, 2010 and Sissonville, West Virginia December,
	9	2012 to see the devastating impact that these gas line
	1.0	explosions can create. Those pipelines were 30 inch and 20
	11	inch gas lines and when you see the damage you will
	12	understand what our concerns are.
PM4-219	13	Before entering Westchester County the proposed
	14	route will run beneath the railroad tracks on the west side
	15	of the Hudson River where CSX has been transporting millions
	16	of gallons of highly volatile crude oil and tanker cars to
	17	locations on the west side of the Hudson as far north as the
	18	Port of Albany.
	19	In our view, the location and proximity of this
PM4-220	20	new 42 inch proposed gas pipeline to the above mentioned
	21	railroad line, Buchanan Verplanck Elementary School, the
	22	Indian Point Nuclear Power Plant operation and its spent
	23	fuel rods storage facility and the numerous homes and
	24	businesses along the proposed route, the active Ramapo and
	25	Stanford Peekskill lines, fault lines, lacks good judgment

PM4-219 There are many gas transmission pipeline crossings of rail lines in the U.S.
Railroads have not been noted by PHMSA as a significant cause of pipeline incidents (see table 4.1.2.-1 in the EIS). Section 4.12.1 of the EIS includes information regarding burial depth requirements under railroads.

PM4-220 See the responses to comments FA4-25, SA2-1, and SA4-2.

```
repair them.
PM4-221
                      Millennium did not repair those faulty wells and
        3 nobody followed up with inspection and those wells were
        4 buried deep in the ground along the Millennium Pipeline and
        5 nobody knows where they are. Such is the stamp of
        6 enforcement and our regulations and all of the environmental
           laws and safety regulations are absolutely meaningless when
           nobody is willing to enforce them.
                      Our experience serves as a cautionary tale to
        10 any community facing similar prospects and warning to FERC
       11 staff that there is growing resentment and anger over a
           process which routinely ignores and dismisses community
        13 impacts while pandering to the whims and wishes of project
           sponsors, who routinely lie, misrepresent and omit relevant
       15 facts as well as evade current laws, regulations and
        16 guidelines in order to support their project, creating grave
       17 risk to public health, safety and the environment.
                      The statements I make about our experiences and
       19 many think I make under oath and challenge FERC staff to
       20 mandate that Spectra do the same in all submissions in this
       21 docket. One of the many, many lies, way too many that I
       22 can detail that Millennium told us in our docket. I'll
       23 just give you an example the company stated that the
           facility would only operate during winter months.
                      This statement was repeated in the environmental
```

assessment and well as in the certification. It was (cont'd) another bold face, unconscionable lie. MS. SUTER: 10 seconds. MS. MALICK: Okay, the facility went live in 2013 and since that time we had three days of relief from the noxious and continuous emissions. MS. SUTER: Your time is up. MS. MALICK: I just want to say that we are not hosting, we are a hostage community, thank you. 10 MS. SUTER: Your time is up. 11 MS. LEE: I have ticket number 29 which means MS. TOMASSETTI: Good evening my name is Gail Tomassetti, a proud member of the Laborer's International Union of North America. Ms. Lee: Could you spell your name please for 17 the record. MS. TOMASSETTI: G-a-i-1 T-o-m-a-s-s-e-t-t-i. I'm here tonight as a concerned environmentalist that enjoys the outdoor spaces that the Hudson Valley offers. In the 21 past 24 years I have worked on many infrastructure projects 22 in Westchester. These projects include major highways and 23 bridges as well as bike paths and playgrounds. PM4-223 | 24 As a resident of Cortlandt, one of the towns that 25 the pipeline runs through, I along with many of my neighbors

PM4-222 Comment noted. The Project is not proposing any modifications associated with the Millennium Pipeline system; therefore, this comment is not within the scope of the EIS prepared for the Project.

PM4-223 Comment noted.

PM4-223	1	are concerned with the condition of the existing pipe. As
(cont'd)	2	a seasoned jury person in the construction trade and
	3	pipeline maintenance and replacement I have seen first-hand
	4	the weakened condition of our aging pipelines.
	5	With this experience $\ensuremath{\text{I}}$ believe that a new thicker
	6	diameter pipeline joined together using modern welding
	7	techniques will bring a safer living environment to our
	8	community. It has also been my experience that all work
	9	done by our skilled laborers results in professional
	10	appearance for our community to be proud of.
	11	Spectra has been operating this gas transmission
	12	line safely in the Hudson Valley region without incident
	13	since the early 1950's. Most of our residents have no idea
	14	that this pipeline even existed until very recently. It is
	15	my opinion that the new pipeline is needed to replace the
	16	existing pipe that is in disrepair.
	17	I urge FERC to approve Spectra's energy
	18	application for the AIM Project to allow this essential
	19	energy project to proceed and to give us the opportunity to
	20	get back to work, thank you very much for your time.
	21	MS. LEE: Number 31 with 32 and 33 ready to go
	22	soon thereafter.
	23	MR. GULLO: Hello, good evening my name is Greg
	24	Gullo G-u-l-1-o. I have been a resident of Cortlandt for
	2.4

PM4-230

		103				
PM4-230	1	be evaluated together.				
(cont'd)	2	We know this is happening, Yorktown homeowners				
	3	have been called to a meeting for September 29th. Why is				
	4	it not being considered segmentation? I feel that Spectra				
	5	is a billion dollar company who sees more billions in their				
	6	future and all they have to do to get it is to put our lives				
	7	at risk, to rip up our streets, our yards and our parks.				
	8	When they head home the towns are left to deal with the				
	9	aftermath.				
	10	They have the resources to find ways around the				
	11	law for their own gain. Me, I'm a stay at home mom of two				
	12	small children who is just trying to find an hour in my day				
	1.3	to do some research and find out what is really going on				
PM4-231	14	here. We have a right to know what risks are involved in				
	15	the full scope of this project. Yorktown will be hit				
PM4-232	16	twice, once with a pigging station and the destruction of 25				
	17	acres of parkland for Spectra's construction yard and then				
PM4-233	18	again with Atlantic Bridge where countless homes and roads				
	19	will be torn up.				
	20	Can someone please hold this company to the				
	21	letter of the law and demand that for our protection this				
PM4-234	22	environmental review be done, combining both projects? And				
	23	I want to address the two people who spoke prior to me. If				
	24	these pipelines were aging and in such bad condition, then				
,	25	maybe both of them should be pulled out instead of just one				

PM4-231 See the response to comment FA3-5.

PM4-232 Algonquin is no longer proposing the Yorktown pipe and contractor ware yard. The launcher/receiver facility would now be located entirely within Algonquin's existing easement. Section 4.8.5.1 and table 4.8.1-1 of the EIS have been revised accordingly.

PM4-233 See the response to comment FA3-5.

PM4-234 As stated in section 4.12.1 of the EIS, PHMSA's regulations include measures to be implemented by the pipeline operator if an increase in population density adjacent to its pipeline occurs. PHMSA's pipeline safety regulations require natural gas transmission operators to develop and follow a written integrity management program to addresses the risks on each covered transmission pipeline segment.

PM4-234 1	when there's only a five year difference between the two.
2	MS. LEE: Number 33, so 34 and 35 should be on
3	deck.
4	MR. BERARDO: Good evening my name is Richard
5	Berardo, R-i-c-h-a-r-d B-e-r-a-r-d-o. I am the
6	secretary/treasurer of the Laborer's International Union
7	North American Local Number 60, covering Westchester and
8	Putnam Counties. On behalf of the business manager Anthony
9	Assensum, I would like to submit the following:
PM4-235 110	Our local consists of 1200 proud union members
11	many of whom live and raise their families in the very
12	communities the Algonquin pipeline currently traverses.
1.3	The laborers of Local 60 have been involved in every major
14	infrastructure project in Westchester and Putnam Counties
15	since 1928, from building our roads and bridges, installing
16	and maintaining our water, sewer, drainage and natural gas
17	pipelines, to building and maintaining our aqua duct dams
18	and water treatment plants.
19	Our members are experienced highly-skilled fairly
20	trained professionals who are committed to the safe and
21	responsible development of our community's infrastructure.
22	It is the same infrastructure that our members and their
2.3	families live with and use on a daily basis.
2.4	Algonquin Incremental Market Project is a critical energy
25	infrastructure, an economically relevant project that will

PM4-235 Comment noted.

	1	create hundreds of good-paying local jobs, while enriching
PM4-235 (cont'd)	2	the local communities where it will be constructed, while
	3	reducing our dependence on foreign energy sources.
	4	The laborers of Local 60 take great pride and
	5	respect the environment where they themselves life, work and
	6	raise their families. Our members take great care in
	7	making sure that project environmental protection plans are
	8	adhered to and believe that the environment still can be
	9	protected while new energy sources are developed in ways
	10	that provide economic benefits and jobs to the community.
	11	The Algonquin Pipeline is an existing pipeline
	12	installed 60 years ago. It is currently running through
	13	our communities today with the visible infrastructure.
	14	Like our roads and bridges there is also an unseen
	15	infrastructure which ages over time much like our roadways
	16	and bridges do. Natural gas pipelines need to be replaced
	17	and upgraded same as our roads and bridges. Out of sight
	18	should not mean out of mind. The replacement of this aging
	19	pipeline will update and modernize our existing energy
	20	infrastructure and we believe that a new energy
	21	infrastructure means a safer one for all communities.
	22	On behalf of all the members of Laborers
	23	International Union of North America, Local Number 60 and
	24	their families, I urge FERC to approve Spectra Energy's
	25	application for the AIM Project that will allow our members

```
1 and the people of this community an opportunity for work,
        2 doing what we have been trained to do and I've been doing
        3 for over 80 years, building and maintaining this community's
        4 infrastructure. Thank you for allowing me this opportunity
            to speak before you tonight.
                      MS. LEE: 34.
                      MR. ROSA: Good evening. My name is Augusto
            Rosa I'm a Local 60 member also, training direct. These
            comments were made by one of my laborers
                      MS. SUTER: Spell your name sir.
       11
                      MR. ROSA: Excuse me?
                      MS. SUTER: Spell your name.
                      MR. ROSA: R-o-s-a. First name A-u-g-u-s-t-o.
PM4-236 , 14 These comments were made by one of my neighbors that had to
       15 leave to go to work so he left me this to read to you. My
       16 name is Remmie Robinson, that's him, I'm a proud member of
       17 Local 60 and a resident of one of the town's which this
       18 Algonquin Pipeline crosses.
                      One of my other members, we are concerned with
       20 the condition of the existing pipe. As a seasoned
       21 journeyman in the construction trade over 30 years, I have
       22 seen first-hand the weakened condition of the aging pipes.
       23 New infrastructure is needed to be in place. The economy in
       24 New York State remains sluggish and the project offers real
       25 jobs and opportunities. The aim of this project will be to
```

PM4-236 Comment noted.

PM4-236	1	contribute to the economic growth and new jobs in the	
(cont'd)	2	Northeast well beyond the life of the project. Union	
	3	laborers have been involved in the Algonquin Pipeline for 60	
	4	years we have highly skilled laborers dedicated to	
	5	contribute to the operation of the safe pipeline.	
	6	This project is officially expanded with minimal	
	7	impact on our communities and our environment. The	
	8	Algonquin Pipeline will allow an unlimited supply of natural	
	9	gas reach and flowing into the Northeast to help meet the	
	10	increased demand of lower cost energy. As you know we	
	11	build in this community and will be included in the	
	12	expansion of the Northeast, so as a laborer of Local 60,	
	13	there's nothing besides knowing the importance of this	
	14	project, so let me thank you.	
	15	MS. LEE: 35, 36 and 37 should be ready to go	
	16	next.	
	17	MS. FOSTER: Good evening my name is Mary Foster,	
	18	M-a-r-y F-o-s-t-e-r. I'm the former mayor of the City of	
PM4-237	19	Peekskill. I will say that the description of this project	
,	20	in 2013 sounded exactly as the previous speaker had said, a	
	21	nice friendly little upgrade of an aging line, but we have	
L,	22	come to understand that that in fact is not what it is.	
	23	My comments though here, due to the hour are	
	24 25	going to be very brief. I want to underscore the comments	
		of Assemblywoman Sandy Galef. The concern around Indian	- 1

		109		
PM4-240	1	a mishap with the derailment of a crude oil tanker would		
(cont'd)	2	have on each other.		
	3	I grew up in Westchester County. My dad worked		
	4	for Anaconda in Hastings, that is a copper factory and I'm		
	5	sure we all remember what it has taken for generations to		
	6	clean up the Hudson River from the FCB's and impacts both		
	7	from the Copper factories and the factories up north. And	PM4-241	See the response to comment LA23-27.
PM 4-241	8	to think that in all of this discussion, there's no	1 1/14-241	See the response to comment LA25-27.
	9	discussion about the potential impact to the Hudson River		
	10	and that impact can happen on either side of the Hudson so I		
PM4-242	11	am extremely concerned that there is fact no representation		
	12	here from Rockland County and I would ask that you all hold	PM4-242	See the response to comment PM4-239.
	13	a public hearing in Rockland County for our colleagues there		
	14	to express their concerns.		
PM4-243	15	I have been told by Senator Gillibrand's staff		
1314243	16	that the Rockland County Legislature will be passing a	PM4-243	Comment noted. Rockland County Legislature's resolution is included comment letter LA22.
	17	Resolution very similar to what Westchester County has done,	1 114 243	
	18	thank you.		
	19	MS. LEE: We are up to number 36, so 37 should be		
	20	ready to go up next.		
	21	MS. VANN: Hello my name is Nancy Vann, I'm a		
	22	resident of Peekskill, my last name is spelled ${\tt V}$ as in		
PM4-244	23	Victor, -a-n-n Nancy is the regular way. No "I". I wanted		
	24	to speak about the fact that Peekskill is an environmental	PM4-244	See the response to comment LA9-16.
	25	justice city. Low income communities and communities of		

	1	color have historically been overburdened as a result of air
PM4-244 (cont'd)	2	pollution from energy generated the facilities and water
	3	pollution from waste treatment facilities and the
	4	disproportionate location of other undesirable land uses in
	5	those communities.
	6	The EPA and the New York State Department of
	7	Environmental Conservation define environmental justice as
	8	the fair treatment and meaningful involvement of all people
	9	regardless of race, color, national origin or income with
	1.0	respect to the development, implementation and enforcement
	11	of environmental laws and regulations and policies.
	12	Fair treatment means that no group of people
	13	should bear a disproportionate share of the negative
	14	environmental consequences resulting from industrial,
	15	environmental and commercial operations or policies.
	16	Meaningful involvement means that people have an opportunity
	17	to participate in decisions about activities that may affect
	18	their environment and their health that the public's
	19	contribution could influence the regulator agencies decision
	20	that their concerns will be considered in the
	21	decision-making process and that the decision-makers seek
	22	out and facilitate the involvements of those potentially
	23	affected.
	24	Feekskill has a population of approximately
	25	25,000 people with a majority of this population being

		111
PM4-244	1	African-American or Latino. Neighborhoods within a 12.5
(cont'd)	2	mile radius of downtown Peekskill are home to more than 100
	3	hazardous or toxic release facilities. Many are located in
	4	predominantly African-American communities.
	5	Health data comparing Peekskill to surrounding
PM4-245	6	communities indicates that Feekskill has unusually high
	7	rates of asthma, including emergency room visits and
	8	hospitalizations, respiratory cancers, deaths due to
	9	cardiovascular disease and high incidence of below birth
	10	weight babies.
	11	The emission and incomplete information in the
PM4-246	12	DEIS denies the meaningful involvement required for
	1.3	environmental justice. Their treatment cannot mean adding
	14	another health and environmental burden to our already
	15	over-burdened communities. To meet the regulatory and
PM4-247	16	legal obligations FERC must withdraw this flawed DEIS and
	17	give full consideration to all of the health, environmental
	18	and safety issues.
	19	MS. SUTER: I'm sorry your time is up.
PM4-248	20	MS. VANN: And give them an opportunity to
	21	comment.
	22	
	23	
	24	
	25	

PM4-245 Comment noted.

PM4-246 Section 4.11.1 of the EIS presents information regarding air emissions and potential impacts.

PM4-247 See the response to comment FA4-1.

```
112
               MS. LEE: 37.
               MS. MARQUES: My name is Olga Marques, it's
 6 C-1-g-a M-a-r-q-u-e-s and my husband is a union member. \; I
 7 am in favor of this project not only for the work it will
 8 bring to the state and I'm sure that the Spectra
 9 organization involved will do this safely according to the
10 federal regulations. My concern is for the aging pipelines
11 that are deteriorating.
               The opposition have concerns about blasts when
13 they occur but do they realize that if the pipeline breaks
14 down it could possible cause an explosion of its own and
15 break down of these pipelines and begin to leak different
16 gas and chemicals into the earth causing environmental
17 health conditions and the well-being of our families and
               Now I find that you know, they are concerned
20 about the pipeline but if the foundation of our house is
21 taken over by a storm or earthquake or whatever, you will
22 rebuild and fix that foundation so that your family can live
23 in that house safely and the roof doesn't cave in. So the
24 breakdown of these pipelines over 60 years and is causing
25 possible blasts of gas is the same thing.
```

PM4-249 Comment noted.

113 You know, it's just a matter of thinking of it in PM4-249 2 a different way. The second reason I'm in favor of this 3 project is because we will become less dependent on foreign 4 countries. We have become very dependent on so many 5 different countries in China, Russia that we worry about 6 constantly, the Arabic countries. Someone here said oh, 7 you know they are funding the Al Queda. Do you realize us buying oil by the Arabs, we are actually funding terrorists 9 organizations to come over here and kill our people during 10 911. 11 I would like to become less dependent on these countries and in a safely manner. I know there are concerns, I have 2 grandchildren of my own and I would like for you to do it safety, independently. We are not here to 15 be against you and I'm hoping that you are not against us, 16 we are here to discuss this and this is the only great 17 nation that we could do this in a reasonable manner, whether 18 you oppose us or we oppose you, so you know and also I find 19 it that you are so concerned about this radiation, but I see 20 people texting and using their cell phones, giving their 21 kids I-Pads with radiation coming out in the kazoo you know, they have to have the most modern technology. I don't see you giving that up. If that was the 24 case and you want to go green, cars that cause gas emissions, let's go back to the 1800's when we had

		114
PM4-249	1	fireplaces, we don't have cars, we have horse and buggies
(cont'd)	2	and we don't have to worry about anything.
	3	MS. SUTER: I'm sorry your time is up.
	4	MS. LEE: So number 38 was dropped off at the
	5	desk, so number 39 please and 40 and 41 should be ready to
	6	go.
	7	MR. MULLER: Good evening my name is Tim Muller.
	8	T-i-m M-u-l-l-e-r. I'm a business representative of the
	9	Operating Engineers, Local 825. I'm here this evening to
	10	speak in support of Spectra Energy's Algonquin Incremental
PM4-250	11	Market or AIM project. The public comment process for this
	12	issue is very important for several reasons.
	1.3	It allows for those residents who would be
	14	affected by the project the opportunity to voice their
	15	concerns and ultimately have them addressed to their
	16	satisfaction. It also allows us, if the project were to go
	17	forward, and we would be involved in the construction of the
PM4-251	18	project, the ability to introduce ourselves to you.
	19	We are working people who are raising families
	20	and live in these areas too. With safety being vital in
	21	everyone's mind, the pipeline and its related above-ground
	22	facilities are to be designed, constructed, operated and
	23	maintained to meet or exceed federal safety standards and
	24	regulations, to ensure as few peripheral disturbances during
	25	construction as possible.
	١

25 misinformation that's going on. This pipeline where it	24	Unfortunately there seems to be a lot of
	25	misinformation that's going on. This pipeline where it

PM4-252 Comment noted.

		116
PM 4-253	1	transects the Village of Buchanan is not to replace the 26
	2	inch line. Let me repeat that, it is not to replace it.
	3	Where it is being siting is in a totally new area. It is
	4	across the street from where the pipelines are right now.
	5	I have specifically asked Algonquin if the 26 inch line
	6	would be decommissioned and removed and they said absolutely
	7	not. That pipeline will be able to put back into service
	8	for the purpose of maintenance on the other lines.
PM4-254	9	So these lines are going to be there in
FM4-234	1.0	perpetuity and where it is being sited right now, it is
	11	going to remove the ability of the Village of Buchanan to
	12	use the rest of its industrialized land. We are
	1.3	approximately 93% incorporated right now, when Indian Point
	14	closes which it will eventually close as well as the
	15	transformer yard be removed, there is going to be several
	16	hundred acres of industrial land which cannot be developed
	17	forever because that pipeline will be there forever.
PM4-255	18	When people say that the cheap gas will help jobs
	19	in this area, absolutely not, Con-Edison has not bid for any
PM4-256	20	more gas in this area. They have not bid for it. The
	21	bidding process only comes up every couple of years and they
	22	didn't ask for any gas last year so they can't ask for any
	23	gas for the next three years and if this project takes two,
	24	you are talking 5, 6 years down the road when they might use
	25	case.

PM4-253 Section 2.1.1.2 of the EIS describes the proposed pipeline facilities within the Stony Point to Yorktown Take-Up and Relay segment of the AIM Project, which traverses the Village of Buchanan. This section identifies that the existing pipelines across the Hudson River would remain in service to enhance system reliability.

PM4-254 We are not aware of any plans to close the IPEC nuclear facility. Any such

plans would be purely speculative at this point and therefore outside the scope of this EIS.

PM4-255 Comment noted.

PM4-256 Comment noted.

117 The town of Cortlandt is not gasified and they do PM4-257 not have land for any other industrial purposes. The area in the village can be used for industrial purposes, but with 4 that pipe there it can never be used. This gas is going to the Northeast. It's going to the Northeast because the artificially deflated gas prices has made other alternate sources of energy not economical. Currently the Northeast has 50 to 60% of its 9 electric generation from natural gas because the prices have become so low Vermont Yankee has been forced to close down. 11 It's going to be closed in December, that's going to be over 1,000 jobs lost, many hundred union jobs permanently lost because of the gas prices. Several other of the coal gas producing coal 15 facilities in Connecticut will be closed, that will be another hundreds of union jobs, by allowing the Northeast to 17 become a single fuel economy. After these plants are closed and this gas line goes through, 80 to 90% of the 19 electric production in the Northeast will be from natural 20 gas. 21 You can't have a single fuel economy it's too susceptible to 22 price fluctuations and outages. During the last Coatesville electric pricing are 650,000 megawatts and our average is only \$80.00 in this area, thank you for your time.

PM4-257 Comment noted. Economic benefits of the Project are discussed in section 4.9.9 of the EIS. We are not aware of any reason the AIM Project facilities would preclude industrial development in the Cortlandt area as most of it is replacing an existing pipeline within an existing right-of-way. Further, alternative energy sources are discussed in section 3.2 of the EIS.

PM-260 Public Meetings

		118
	1	MS. LEE: Number 41.
	2	MS. MACKAY: Hi my name is Lisa Mackay, L-i-s-a
PM4-258	3	M-a-c-k-a-y. I'm a lifelong resident of Yorktown. I am
,	4	making these comments under protest. FERC's approval
PM4-259	5	process and draft environmental impact statement, the DEIS
	6	are fundamentally flawed and I demand that the DEIS be
	7	withdrawn and that a supplemental draft environmental impact
	8	statement be submitted for public review only after all
	9	relevant parties have submitted all necessary information.
	10	Today I wanted to speak about the DEIS Section
PM4-260	11	4.1.3 cumulative impacts regarding the Atlantic Bridge
	12	project which will now involve the expansion of the existing
	1.3	pipeline to the rest of Yorktown.
	14	As a clear record exists indicating that Spectra
	15	has already begun planning the Atlantic Bridge Project, I
	16	request that the potential impacts from this project also be
	17	included in the AIM DEIS. This same pipeline crosses all of
	18	Yorktown, but Spectra has broken up this full pipeline
	19	expansion into two phases, which is the clear example of the
	20	legal segmentation.
	21	The AIM Project ends at Stony Street and the
	22	Atlantic Project begins right at Stony Street, the same
	23	pipe. They have already surveyed the area for the Atlantic
-	24	Bridge Project, in fact they will be holding their first
- 1	25	landowner informational meeting in Yorktown on September

PM4-258 Comment noted.

PM4-259 See the responses to comments FA4-1 and SA1-12.

PM4-260 See the response to comment FA3-5.

		119
PM4-261	1	29th. How is this not a clear example of segmentation?
	2	When the second phase as started before the first phase is
	3	even approved?
	4	Looking at these two phases separately is not
	5	only illegal but wrong. Separating them does not allow an
	6	adequate assessment of the combined overall health,
	7	environmental and safety risks and impacts on our community
	8	in their totality, thank you very much.
	9	MS. LEE: Number 42, 43 and 44 should be ready to
	10	go up next.
	11	MR. FCRD: Good evening my name is Charles Ford
	12	C-h-a-r-l-e-s F-o-r-d proud member of Laborers Local 754
PM4-262	13	Rockland County. This pipeline I think is really, you know,
	14	should come through here because it's falling apart, the one
	15	that's there now you know and like much of the
	16	infrastructure in this country and it's just going to be
	17	good for the economy, it's going to be good for all of us
	18	working on it.
	19	We're not here to destroy anyone's community or
	20	yard or anyone's home, you know we all live here too, we're
	21	not like they said earlier, we're not some kind of you know
	22	import workers from you know Europe you know or wherever,
	23	Canada or Syracuse, we are all local people you know and we
	24	are trying to make a living and work with you guys and work
	25	with communities and keep everyone safe.

PM4-261 See the response to comment FA3-5.

PM4-262 Comment noted.

		120
PM4-262	1	We are sent to all kinds of classes, safety
cont'd)	2	training and all kinds of training, inertia and you know we
	3	are trying to work safe. Union workers you know we are all
	4	united, we all work together we are not, you know fly by
	5	night company or people that you know are animals, you know,
	6	we are just trying to work safely and keep you guys safe and
	7	as a whole we just want to better the community and without
	8	this pipeline, without pipelines like it, there's no lights,
	9	there's no power, there's it's an affordable energy source
	10	and I think it should be upgrade, that's all I have to say.
	11	MS. LEE: Number 43, okay, number 44, 45?
	12	MR. MUSCOLO: Hi my name is Frank Muscolo
PM4-263	13	F-r-a-n-k M-u-s-c-o-l-o a long-time resident of the Hamlet
	14	of Verplanck and I'm making these comments under protest to
	15	FERC's approval process to the draft environmental impact
PM4-264	16	statement, a fatally flawed and I demand that the DEIS be
	17	thrown out and that a supplemental draft environmental
	18	impact statement be submitted for the public review, only
	19	after the relevant parties have submitted all the necessary
	20	information.
	21	Some of the points that resonate with me tonight,
	22	a lot of people have done a lot more research than I have,
	23	have been basically the lack of adequate critical details
	24	provided by the private enterprise at this stage of this
M4-265	25	process, of this proposal. The multitude of risks to air,

PM4-263 Comment noted.

PM4-264 See the responses to comments FA4-1 and SA1-12.

PM4-265 Comment noted. Sections 4.3.2.6 and 4.4.3 of the EIS discuss potential impacts and mitigation measures for surface waters and wetlands. Section 4.11.1 of the EIS discusses the potential impacts and mitigation measures for air emissions.

		121
PM4-265 (cont')	1	water and clearly our lives are at stake. Basically, the
PM4-266	2	compounding of risks in putting in this massive project
	3	around a nuclear power plant and a couple geologic fault
	4	lines.
PM4-267	5	The exposure of real catastrophe, not only to
	6	accident but to terrorism I could see this area being a big
	7	bulls-eye down the road with these high risks in place.
	8	Another thing that resonates is the unity of all the
	9	communities, the town's leadership related to this project
	10	after they did their independent assessment.
PM4-268	11	Along with higher capacity and higher pressure
	12	that comes along with this pipeline is a compounding of
	13	risks that takes place, exposing our communities and many
	14	others, beyond those to catastrophic accident. As I read
	15	and listen to the substantial increase in capacity and the
	16	size of this massive pipe, one thing that kind of resonates
	17	in my mind from the movie and that is a chain is no stronger
	18	than its weakest link, and I see catastrophe down the road
	19	as a result of this, thank you.
	20	MS. LEE: Number 46, 46? 47?
	21	MS. SUTER: Have like 5 on deck, a lot of
	22	you guys have started clearing out at this break, sc 47, 48,
	23	49 50 come on down.
	24	MS. ANDERSON: Good evening my name is Lisa
	25	Anderson L-i-s-a A-n-d-e-r-s-o-n. I am the mother of five

PM4-266 See the responses to comments FA4-25, SA2-1, and SA4-2.

PM4-267 See the response to comment CO7-6.

PM4-268 Section 4.12.1 of the EIS discusses federal safety standards for natural gas pipelines and how these standards are applied in HCAs. Section 4.12.3 of the EIS discusses safety-related concerns and other specific measures that Algonquin has proposed or that we are recommending to further address public safety concerns. The safety standards are designed to take into account risk factors such as line pressure and density of dwellings, applying more stringent standards when risk factors are higher.

	123
1	MS. LEE: 48.
2	MR. BACON: Good evening, my name is well
13	first of all let me thank you for holding this public
4	hearing and I appreciate, all the public should appreciate
5	everybody coming out to listen to everybody and trying to
6	learn about this project. My name is James Bacon J-a-m-e-s
7	B-a-c-o-n, I'm an attorney representing the Community of
9	Watersheds Clean Water Coalition, advocates for clean water.
g	
10	We are concerned with the project's impacts on
PM4-273 11	Croton's watershed from mile post 10 to 12.3 in Yorktown
12	that currently provides 10% of the drinking water for 9
1.3	million New Yorkers. Unfortunately these waters violates
1.4	state quality standards for too much phosphorous which
1.5	causes odor, taste and color problems.
1.6	As a result, the Clean Water Act requires
17	Croton's towns to reduce annual phosphorous loadings by
18	thousands of pounds. Our engineer is Raul Verma who is the
1.9	Executive Director for the East of the Hudson Watershed
20	Corporation charged with installing storm water retrofits.
21	These retrofits costs \$40,000 to remove one ton of
22	phosphorous, not including operation and maintenance. So
2.3	an cunce of prevention is worth far more than a pound of
24	cure.
25	We've analyzed the DEIS and find it fundamentally

PM4-273 See the responses to comments SA14-1 and CO21-15.

		124			
PM4-274	1 2	deficient in disclosing impacts to wetlands and water quality and endangered species. Wetlands Act that sinks	PM4-274	Comment noted. See the responses to comments CO21-3 and CO21-6.	
	3	and transformers of phosphorous, the Croton Fipeline segment			
	5	will excavate almost 17,000 cubic yards of wetlands, enough to fill this room to a depth of 60 feet.	PM4-275	See the responses to comments CO21-6 and CO21-7.	
	6 7 8	Excavation will release and re-suspend significant amounts of phosphorous into the Hunter Brook and into Croton yet the DEIS does not include an analysis at all	PM4-275	See the responses to comments CO21-0 and CO21-7.	
1	9	on this subject. Moreover, our wetland scientist, Dr. Eric Kivia, of Astonia found several locations where the DRIS failed to delineate or under-delineated wetlands between			
PM4-276	.2	milepost 10 and 12.3. Kivia also identified endangered species at two locations missed in the DEIS and determined that the DEIS's endangered species surveys are incomplete. Now at the	PM4-276	See the responses to comments CO21-7 and CO21-8.	
1	.6	heart of the NEPA, the heard of the NEPA is the alternative analysis and the Clean Water Act presumes that alternatives are available to avoid wetland's impacts, however there is			
2	9	no DEIS alternative that avoids the Croton, either by moving the Stony Street terminus west or burying the PSI.	DM4 055		
PM4-277	1 2 3	Now considering the new compressor unit in Rockland County will be an increase by 50% to 15,000 horsepower it's reasonable to consider moving the Stony	PM4-277	Algonquin conducted hydraulic modeling to determine the optimal locations where the existing pipeline would need to be replaced and where new pipeline and compression would need to be installed to deliver the proposed natural gas volumes. We have reviewed Algonquin's proposal and agree with proposed	
2	5	Street terminus out of the watershed, especially because the proposed 850 psi is far below the industry maximum of 1500		location of the proposed Stony Point to Yorktown Take-up and Relay segme Our assessment of alternatives concerning this replacement is evaluated in section 3.0 of the EIS.	

	125		
1	psi.		
PM4-278 I	Finally, NEPA requires analysis cumulative	73.54.050	7.05

PM4-283 Comment noted. As discussed in section 4.9.1 of the EIS, Algonquin anticipates hiring a substantial number of local construction workers with the requisite experience for the installation of the natural gas facilities. Economic benefits of the Project are discussed in section 4.9.9 of the EIS.

PM4-284 See the response to comment PM4-283.

		127
PM4-284	1	building the Rockaway Lateral Pipeline they are from Montana
(cont'd)	2	and Minnesota. They are staying outside of Brooklyn and
	3	New Jersey and Long Island. They do not bring local jobs,
	4	they do not bring local money they do not bring local
	5	economic development. That is a huge problem.
	6	And there's been a lot of discussion about the
PM4-285	7	safety of the pipeline and the safety of compressor stations
	8	and complying with the laws. The issue here is that both
	9	pipelines and compressor stations are fundamentally
	10	problematic, they are flawed, they are inherently dangerous
	11	products. They carry inherently dangerous products to us,
	12	it doesn't matter how safely they are operated. It doesn't
	13	matter if they are in compliance with the law, which by the
	14	way they are not.
	15	Spectra has so many violations the fact that they
	16	are even allowed to apply for more permits is reprehensible.
	17	The fact of the matter is they don't operate safely even
PM4-286	18	when they follow the law. I know people that live across
	19	the street from compressor stations, they are sick. There
	20	are many dangerous fumes and gases that are constantly being
	21	emitted.
	22	There are things like magnesium, hydro-carbons,
	23	volatile organic hydro-carbons, ethane, propane, butane,
	24	pentane, methane, hydrogen oxide and ground-level ozone.
	25	These are highly dangerous they cause all kinds of upper

PM4-285 We agree that natural gas pipelines pose some level of risk to the public. But we disagree that it doesn't matter how safely pipelines are operated or whether operators comply with safety regulations. It is of utmost importance that pipeline systems are operated safely, and in full compliance with federal safety regulations.

PM4-286 See the responses to comments SA4-1 and SA4-9 for additional information regarding compressor station emissions and emission impact analyses.

PM-270 **Public Meetings**

		128
PM4-287	1	respiratory problems, nose bleeds, rashes, everything else.
	2	Also the pipelines themselves explode they pick
PM4-288	3	up the radioactive material, I'm running out of time so I'm
	4	going to say really quickly you're helping society to have
	5	what fracking and outside sources are bringing us in, it's
	6	time for you to understand that the project won't bring New
PM4-289	7	York and it's workers the clean, safe energy future that we
	8	deserve, instead AIM will handcuff us to a future of fossil
	9	fuel which will poison our communities, further pushing us
	10	into the climate paths that we are experiencing right now.
PM4-290	11	I urge you to change your pattern FERC, do something bold,
	12	stop rubber stamping permits. Instead of approving 98% of
	13	fossil fuel infrastructure projects, stand up for the people
	14	of New York.
	15	MS. SUTER: Your time is up.
	16	MS. ROFF: We deserve it.
	17	MS. SUTER: Your time is up. We are on 52, let's
	18	get going folks, 53, 54.
	19	MS. LEE: So the rest of you 50's come closer.
	20	MS. KOMIN: My name is Catyana Komin
	21	C-a-t-y-a-n-a and last name K-o-m-i-n. I live in New
	22	Rochelle with my husband, but my 3 grandchildren live in
	23	Somers that's why I am here. And I wanted to talk I'm
PM4-291	24	giving you a few statements, so nobody talked about the
	25	questions of Paget. Paget caused 971.5 million so who will

PM4-287	Comment noted.
PM4-288	Radon is discussed in section 4.11.3 of the EIS. See also the response to comment SA4-4.
PM4-289	Comment noted. See the response to comment FL2-2.
PM4-290	See the responses to comments SA2-10 and IND173-8.

PM4-291

comment IND102-3.

	1	pay Spectra, we, the taxpayer. So we pay our tax money for
(cont'd)	2	our safety and health and for our sickness.
	3	And yeah, also I want to say that this
PM4-292	4	Westchester is the type I don't know if you are from
	5	Westchester, but Westchester pays the highest property taxes
	6	so it's also a consideration for us. A lot of speakers
PM4-293	7	before me talked about safety of Indian Point and just as a
	8	nuclear plant could not co-exist with pipeline station, just
	9	the nature of it.
PM4-294	10	Pipeline stations unfortunately are very unsafe,
	11	as they often have accidents like Spectra has many
	12	violations, everybody knows about this, but what I want to
	1.3	talk about even for the current pipeline 26 inches, was not
	14	done proper risk assessment, was not done an evaluation and
	15	the NRC, nuclear regulation must actually give you some
	16	assessment before you concede to something else, anything.
	17	NRC with Entergy has to make the risk assessment and without
	18	it you can concede anything. Everybody wants it. So the AIM
	19	project, so what else.
	20	MS. SUTER: Thank you that's the end of your
	21	time, I'm sorry but you can submit the rest of your comments
	22	in written form.
	23	MS. KOMIN: No.
	2.4	MS. SUTER: That's it.
	25	MS. LEE: 55?

PM4-292 Comment noted.

	5	national consumer Ed non-profit with over 65,000 supporters
	6	here in the state of New York.
PM4-295	7	Simply put the DEIS is fatally flawed and must be
	8	withdrawn as others have rightly point out, many of these
PM4-296	9	flaws, I'm going to focus on the lack of analysis and what
I W14-250	10	impacts the project would have on natural gas development in
	11	the Catskill Aqua Duct crossing.
	12	The National Environmental Policy Act or NEPA
PM 4-297	13	requires a full analysis of a project's impact, whether
	14	direct, indirect or cumulative. Yet, the DEIS omits any
	15	substantive discussion of the foreseeable draft development,
	16	concluding without discussion that the resources that may be
	17	affected by the Marcellus shale development would not be
	18	affected by the project and that the project would not be
	19	affected by the development in the Marcellus region.
	20	The DEIS completely fails to address the indirect
	21	impacts of induced gas development and fails to consider how
	22	the environmental impacts of the proposed project may be
	23	accumulated with the gas impacts in the region. The
	24	complete absence of analysis, whether indirect or cumulative
	25	impacts of the project on natural gas development has

PM4-295 See the response to comment FA4-1.

PM4-296 See the response to comment SA11-9.

PM4-297 See the responses to comments FA4-24 and IND243-3.

		131		
PM4-298	1 2	clearly deprived the public of a meaningful opportunity to comment on the proposed project, the revised DEIS must be	PM4-298	See the responses to comments FA4-1 and S1-12.
	3	prepared for public review and public comment to analyze any		
	4	potential impact the project would have on natural gas		
	5	development in the region.		
PM4-299	6	Likewise, the DEIS also fails to address the	D	0.1
PM4-299	7	potential impact on the Catskill Aqua Duct. The proposed	PM4-299	See the responses to comments SA11-9 and LA26-2.
	8	Stony Point to Yorktown pickup and relay segment of the		
	9	proposed project plans to cross the Catskill Aqua Duct, a		
	10	vital part of the New York City water supply system.		
	11	To date Algonquin has not finalized its site		
	12	specific plans for crossing the Catskill Aqua Duct and it is		
	1.3	still in consultation with the New York City Department of		
	14	Environmental Protection regarding the crossing and		
	15	evaluating an alternative route to relocate the segment to		
	16	the south.		
	17	Algonquin's failure to finalize any site specific		
	18	plans for crossing the Catskill Aqua Duct has deprived the		
	19	public of meaningful opportunity to comment on the proposed		
	20	project. Given the obvious importance of the Catskill Aqua		
	21	Duct to millions of New Yorkers that rely on it for drinking		
	22	water every day, the public must be allowed to comment on		
	23	this piece of the project.		
PM4-300	2.4	A revised DEIS must be prepared for review and		
	25	public comments to fully examine the extent of any impact on	PM4-300	See the response to comment FA4-1. Section 4.3.2.1 of the EIS has been revised to include additional information relative to the crossing of the Catskill Aqueduct.

	1	the Catskill Aqua Duct.
PM4-301	2	I'll close by saying as many others tonight have
	3	the DEIS is fatally flawed and it must be withdrawn and I
	4	urge the commission to withdraw the DEIS, address all the
	5	outstanding issues and issue a supplemental DEIS which then
	6	must be submitted for a 90 day public comment period, thanks
	7	again,
	В	MS. LEE: Number 56, 56, I have 57 and 58 so we
	9	are 59?
	10	MS. WEININGER: Good evening my name is Ellen
	11	Weininger E-1-1-e-n W-e-i-n-i-n-g-e-r. I am the Director
	12	of Education Outreach for the Education of Science, Space
	13	and Environmental health non-profit. FERC's conclusion
PM4-302	114	that the AIM Project will have no significance environmental
	15	impacts is baseless evidenced by the premature draft DEIS
	16	with numerous missing studies and documents. It must be
	17	withdrawn, the required studies completed and the documents
	18	submitted, including the independent and transparent
	19	baseline testing, health impact assessment, cumulative risk
	20	assessment as outlined in the Westchester County Resolution.
PM4-303	21	A complete supplemental DEIS must be prepared and
	22	reissued with a new public comment period. We were just
PM4-304	2.3	told earlier that the decision for this project rests
	24	entirely with the FERC Commissioners. How and when did the
	25	Commissioners make those decisions? Do they review all the

PM4-301 See the responses to comments FA4-1, FA6-5, and SA1-12. PM4-302 See the responses to comments FA4-1, IND284-3, and PM4-92. PM4-303 See the responses to comments FA6-5 and SA1-12. PM4-304 After the final EIS is issued, the FERC Commissioners will decide whether to issue the AIM Project a Certificate. The EIS, which includes all comments received, provides an environmental impact analysis to help inform the Commissioners' decision. See also section 1.1 of the EIS regarding the Commission's Certificate Policy Statement and section 1.3 regarding the other

permits and authorizations needed for this Project.

		133
PM4-304	1	documents and all of the public comments? Public comments
(cont'd)	2	come from informed residents and experts in science,
	3	engineering, medicine, economics, law and nuclear power and
	4	pipelines.
	5	The draft DEIS has already prematurely concluded
	6	that the AIM Project will have no significant environmental
	7	impacts. Have the Commissioners already come to that same
	8	unsupportable conclusion? Is this whole public comment
	9	process an exercise in futility? If the decision is
	10	already made before the all the information and necessary
	11	assessments are conducted?
PM4-305	12	Despite federal regulations requiring the risk
	13	analysis for new hazards near Indian Point, no such risk
	14	assessment has been conducted and we know that there are
	15	many new structures. In the early 1960's when the first
	16	nuclear reactor was constructed next to the existing
	17	Algonquin pipelines that were built in 1963 the regulatory
	18	framework did not exist.
	19	Reactor 1 was closed in the 70's and reactors 2
	20	and 3 were proposed. By then federal regulations were in
	21	place requiring a risk assessment but it was never done and
	22	the responsible agencies looked the other way. This is the
	23	only nuclear power plant in the country sited next to
	24	natural gas pipelines.
	25	Now 40 years later federal regs are still in

PM4-305 See the response to comment FA4-25.

		134
	1	place but the number of hazards has increased in exceedingly
PM4-305 (cont'd)	2	close proximity to Indian Point. What's the tipping point?
	3	How many hazards each significant in its own right does it
	4	take before basic common sense prevails and purportionary
	5	measures are taken and federally required risk analysis are
	6	conducted in an independent, transparent fashion.
	7	Before any decisions are made about this
	8	permitting process, there are many studies, I will actually
	9	and since my time looks like it's running out, that
	10	consumers don't want to be sold a discontinued model. The
	11	people of the Northeast do not want to be a sacrifice for
	12	the exports that this pipeline is actually aiming for.
PM4-306	13	FERC has to get it right the first time not the
	14	way it happened years ago when the Indian Point reactors
	15	number 2 and 3 were proposed and constructed. Lives are
	16	on the line and so is our future, thank you.
	17	MS. LEE: 607 And I would encourage all of those
	18	holding tickets in the 60's please come up and be ready to
	19	speak.
	20	MR. FEIN: Thank you for having this session.
	21	I'm Jonathan Fein J-o-n-a-t-h-a-n F-e-i-n. I have a house
	22	near the Blue Mountain reservation. A half century ago we
	23	didn't have the awareness of the effects of human actions on
	24	the well-being of the environment and we didn't have
	25	regulations aimed to protect natural spaces.

PM4-306 Comment noted.

	135
PM4-307 1	If a company today proposed to tear up a forest
2	to install pipeline it would not be allowed, so why should
3	we allow them to bisect the Blue Mountain reservation in
4	order to expand one that exists there?
5	Each year scientists are discovering how little
6	we know of complex interactions with food webs and the
7	eco-system, micro-climates and the delicate interdependence
8	of life forms, actions which in the past have been thought
9	to be remediateable may turn out to be irreversible and have
10	far-ranging ramifications.
11	Climate change has altered the equations which in
PM4-308 12	the past have informed decisions such as this. The EIS in
1.3	Section 3 discounts the ability of the energy conservation
1.4	and renewable energy sources to meet the energy desires of
15	the Northeast within a "time frame of the proposed project".
16	Perhaps in light of the possible serious irreversible harms
17	that this project may bring about, this arbitrary timeframe
18	should be set aside as alternatives are better developed and
19	assessed.
20	We must be wise, thoughtful and careful before we
21	allow potentially damaging actions to take place.
22	MS. LEE: 61?
23	MR. REICH: Hello how are you? My name is
24	Richard Reich, I'm here to read this statement on behalf of
25	Steven Reich, the Business Manager for Labors Local 754. I

PM4-307 Comment noted. Impacts on the Blue Mountain Reservation are discussed in section 4.8.5.1 of the EIS.

PM4-308 The scenario suggested would be the same as the no action alternative, which is evaluated in section 3.1 of the EIS.

PM4-309 1	would like to express both my personal support and
2	MS. LEE: Sorry sir, can you please spell your
3	name for the record.
4	MR. REICH: Richard Reich R-e-i-c-h reading the
5	statement for Steven Reich, R-e-i-c-h, Business Manager of
6	Local 754. I would like to express both my personal
7	support and the support of the local I represent for Spectra
PM4-310	Energy's Algonquin Incremental Market Share Project. This
9	project will create thousands of man hours for men and women
1.0	in the Hudson Valley who rely on these jobs to support their
11	families and pay their taxes.
12	The last part of this project in Rockland
1.3	resulted in 50,000 man hours for Local 754 alone. These
1.4	are high-paying jobs with solid union benefits. Spectra
15	Energy has proven over and over again that they will operate
16	safely in the Hudson Valley. They have been here for over
17	50 years operating pipelines without any incidents. So
18	much misinformation has been released by some opponents to
19	the project but here are the facts.
20	Over 90% of the project will occur on the
21	existing right-of-way, one with an active pipeline already
22	operating. Common sense tells us that replacing older
23	pipeline with new pipeline can only improve safety. New
24	technology and designs at the Southeast and Stony Point
25	compressor stations will reduce emissions.

PM4-309 Comment noted.

PM4-310 Comment noted.

PM4-310	1	Spectra has met or exceeded all federal safety
(cont'd)	2	standards. The completed project will result in more tax
	3	revenue for all tax authorities within its range. There is
	4	no negative impact on the homeowner values anywhere by this
	5	pipeline and property insurance is not affected by gas line
	6	proximity.
	7	Directional boring technology will be used for
	8	the river crossing to minimize all river environmental
	9	impacts. Directional boring is not fracking they are two
	10	completely different processes. One blatant
	11	misrepresentation I have read on many anti-pipeline
	12	websites.
	13	Independent studies have shown that there is no
	14	seismic risk involved on the project's right-of-way.
	15	Alternate routes have been evaluated and proposed routes
	16	have been adjusted to meet all stakeholder concerns. This
	17	expansion will make gas available to our fellow countrymen
	18	in the delinquent region who are hit with gas prices much
	19	higher than I'll speak to capacity shortages during extreme
	20	cold weather events.
	21	Events like last Winter's polar vortex that would
	22	have cost us all in this room so much more if it were not
	23	for Spectra's latest New York, New Jersey expansion.
	24	Rockland and Westchester will have more gas to draw for our
	25	business growth and inevitably switch from gasoline powered

```
1 engines to natural gas powered engines due to an
PM4-310
       2 environmental, economic and national concerns.
                     This work will be done by professionals whom are
       4 experts in handling any hazards and know how to minimize all
       5 risks associated with the work. Spectra has shown they are
       6 willing to address individual property owner's concerns and
       7 will continue to do so with an emphasis on working on
          acceptable compromises at their own expense.
                     These are facts that can be seen in the DEIS and
      10 are not fabrications. Spectra offers to develop
      11 ball-fields for Yorktown was insanely rejected and now
          becomes a taxpayer burden. On that it has added to the tax
      13 system that we all know is over-burdened already. All one
      14 has to do is work on one of Spectra's pipeline jobs and you
      15 will see how strict they are with safety, environmental and
      16 community agreements that they make. It is time for the
      17 misrepresentation of the facts to stop and take advantage of
          the opportunity projects like this one bring to our
          communities and state.
      20
                     MS. SUTER: I'm sorry sir your time is up.
     21
                     MR. REICH: Thank you very much.
      22
                     MS. LEE: 62? 63? 64? 65? 66?
                     MR. JCHNSON: 67 Tom Johnson T-c-m
     23
     24 J-o-h-n-s-o-n. I thank you for staying here so late tonight
     25 listening to us talk about this project. On FERC, I am for
```

139 1 natural gas pipelines. I am for union guys who build natural gas pipelines. I invest in them, in my retirement catalogue my clients all own them. They are very 4 profitable. They are good for the economy, so you are PM4311 | 6 probably asking yourself right now why is he wearing that 7 red shirt that says stop the Algonquin Pipeline extension? 8 Well, location, location, location. When they started 9 telling us all about this, it was just going to be in the 10 existing right-of-way. It was their prerogative to build 11 that. They were going to pull up old decrepit pipeline and replace it with safer new pipeline. Then we start finding out it's a larger pipeline. Then we start figuring out it's to sell gas 15 overseas. Well you know something I'm for that too. I 16 like to promote unions here and break the back of the 17 emergence of the Soviet Union by selling gas to our NATO allies. However, what we should not do is give Spectra the cheapest most possible way to get from point A to point B. It would appear from the little bit of research I've done is that when you see Spectra talk to the CEO of 22 Entergy they didn't come to terms on running it 100% in 23 their right-of-way so they decided they would do a little 24 diversion and find another way. And to their hope and 25 surprise it was even a cheaper way, less expensive, more

PM4-311 See the responses to comments CO15-4.

1 2 PM4-312 3 4 5 FM4-313 6 7 8	profitable. That's not our job and quite frankly that's not your job to make them more profitable. They should go the safest possible way. Did they really look, did they look? Well according to Seth Freich who I trust impeccably, he's my neighbor and friend, they said this is only impacting a handful of houses. So you must be shocked to see more than a handful of us here	PM4-312

PM4-315 Comment noted.

PM4-315 (cont'd)	1	
PM4-315 (cont'd)	1	air pollution, including supporting the conversion of the
25 33 33 C C 55	2	heating oil to natural gas that results in less pollution.
	3	The AIM Project supports these policies and that's a breath
	4	of fresh air for New York.
	5	My unit Local 754 and I urge FERC to approve
	6	Spectra Energy's application for the AIM Project to allow
	7	this essential energy infrastructure project to proceed and
	8	give us the opportunity to get back to work, thank you very
d	9	much.
	10	MS. LEE: 737 74? 757 76? Okay you're up
	11	because I've got ?7.
	12	MS. FILGUERAS: Hello my name is Susan Filgueras
	13	F-i-l-g-u-e-r-a-s and I am from Rockland County. And I am
	14	also one of those people who can, who has the potential to
	15	be affected physically by the transmission line. I live
	16	exactly 666 feet north downhill from the transmission line.
PM4-316	17	The line will be built on ledge and in order to
	18	get the line, route the ledge, even though they're digging
	19	up the existing line, they will use hammer jacks and
	20	blasting techniques. They could affect my well. And for
	21	those of you with wells and septic, you know that if you do
	22	not have potable water your home can be condemned. The
I,	23	bank can pull your mortgage.
	24	I have a letter from one of my other neighbors to
	25	that effect and I'm going to go on to my bigger point

PM4-316 See the response to comment IND136-1.

		143
	1	standing here. I have heard from the unions, I have heard
PM4-317	2	the technical, we've heard an awful lot. How about the
	3	cumulative effects of the Spectra 42" gas pipeline?
	4	On the back of the testimony I submitted in the
PM4-318	5	back of the room is a map and in Rockland County where the
	6	infrastructure will be the Spectra 42 inch pipeline is
	7	slated to come out somewhere in front of the Lovett Power
	8	Plant. That is in the direct trajectory of the Ramapo
	9	double fault line. Added to that is a little project
	10	called the Champlain Hudson Power Express, a 1,000 megawatt
	11	transmission line that's going to run down the river. It's
	12	hot in temperature.
	13	The plan is to lay that transmission line on top
	14	of the three existing 21, 24 and 36 inch natural gas
	15	high-pressure pipelines. And there's been no discussion of
	16	how that will happen. On the front of my testimony is a
	17	picture, something they call as grapnel it looks like a
	18	ship's anchor, they are going to the Champlain Hudson Power
	19	Express will drag the ship's anchor through the river over
	20	those three high pressured gas pipes so that they can lay
	21	their 1,000 megawatts of hot power.
PM4-319	22	Now that's bad enough but we have the CSX 26
	23	million dollar expansion which will be moving black and
	24	crude up and down the Mortheast coast. Hundreds of
	25	thousands of gallons daily, they are running much heavier at

PM4-317 Cumulative impacts associated with the Project are discussed in section 4.13 of the EIS.

PM4-318 See the responses to comments FA4-25, SA4-2, SA7-4. The proposed pipeline under the Hudson River would be installed using the HDD technique. The depth of cover beneath the Hudson River bottom would range from 20 feet at the western shore to 26 feet at the eastern shore. At its deepest point the pipe would be installed 100 feet below the river bed.

PM4-319 See the response to comment PM4-219.

PM-286 Public Meetings

		144
	1	night so the trains can be counted.
PM4-320	2	So now I have three existing high-volume
	3	transportation pipes going across the river, on top of the
	4	Ramapo fault. We are going to put a 42 inch on the ground
	5	right next to them, we are going to lay a thousand megawatts
	6	of high power on top of them and we are going to transport
	7	millions, hundreds of millions of gallons of black and crude
	В	on top it. Can I ask if anybody's got a match because
I	9	that's what's going to happen to Rockland County.
	10	I would ask that this
	11	MS. SUTER: I'm sorry your time is up. Your time
	12	is up and we have to go to the next speaker.
	13	MS. LEE: I have 79 we are now on to 80, 81? 82?
	14	What number do you have? 82.
	15	MS. WELLS: My name is Karen Wells, W-e-1-1-s and
	16	I am here representing United Communities of Westchester and
	17	with me I have a sign that is over ten years old. It
	18	serves as a reminder to FERC the Millennium Pipeline. This
PM4-321 I	19	is a pipeline which FERC authorized in the process much like
	20	you are going through today. That pipeline was rejected by
	21	the Secretary of Commerce after years in court proving that
- 1	22	the FERC process was inadequate then and we will prove once
I,	23	again that the process is inadequate now.
PM4-322	24	The DRIS should get an F. It is incomplete, it
L	25	is not only incomplete, it is filled with lapses in judgment

PM4-320 See the responses to comments SA4-2, SA7-4, IND136-2, and PM4-219.

PM4-321 Comment noted.

PM4-322 See the responses to comments FA4-1 and FA6-5.

145 in sustainable use of metrics. There was a question PM4-323 earlier about is FERC the final decision-maker here. FERC is the final regulator decision however, the process will continue into the courts if this is authorized because FERC is not living up to its obligations to recognize the issue 6 around national security, around segmentation, around environmental injustice, not to mention the numerous environmental issues that several people have brought before you in their comments back to in both written form and in speaking this evening. So I ask you to remember that it is easier to do your job well the first time then to have all of us continue to pay legal fees, continue to spend our free time trying to get redress for a job not done properly thank you. MS. LEE: Okay, 83? 84? 5? 6? Okay. MS. DUVALL: So good evening and thank you for bearing with us tonight. My name is Misti Duvall, M-i-s-t-i D-u-v-a-1-1. I'm a staff attorney with River Keeper and I want to thank you again for the opportunity to present our initial comments on the AIM Project DEIS tonight. 21 We are currently reviewing the DEIS and 22 associated documents and will be submitted the tale of 23 written comments by the end of the comment period. The River Keepers is a member supported watchdog organization 25 dedicated to defending the Hudson River and its tributaries

PM4-323 See the responses to comments FA4-1 and FA6-5.

	146
1	and protecting the drinking water supply of 9 million New
2	York City and Hudson Valley residents.
3	We are also actively involved in litigation,
4	advocacy and public education touting the issue of shale gas
5	extraction and the risk to infrastructure, particular it has
6	the potential impacts on New York State's drinking water
7	supply.
В	In New York State the entire AIM Project
9	expansion is located within the Hudson River and its
10	watershed and the New York City drinking water supply
11	watershed. Protecting them both these resources is central
12	to our mission. You have heard testimony regarding several
1.3	important issues tonight so I'll keep my comments brief.
14	The River Keeper is particularly concerned about
44-324 15	the potential of the AIM Project to adversely impact water
16	quality in the Hudson River and its watershed and the New
17	York City water supply watershed. Fortions of the proposed
18	project are within a sensitive Croton watershed, part of the
19	east of Hudson New York City watershed and a significant
20	concern is drinking water supply watershed and drinking
21	water supply reservoirs and the Croton watershed are
22	currently impaired and require careful protection in order
23	to avoid further degradation.
M4-325 24	Potential impacts include storm water run-off
25	which can carry pollutants in a water supply, degradation of

PM4-324 Utilizing the HDD method on the Hudson River avoids disturbance to riverbottom sediments, as all subsurface materials removed along the drill path during the drilling process is removed from the borehole and contained within temporary lined mud pits. See also the responses to comments SA14-1 and CO21-44.

17 inch	burn, Texas it was a 36 by the way San Bruno was a 30
	pipeline, this is a 42. Clayburn, Texas was a 36 inch
18 pipe	pline it had a 1,400 foot impact radius so here's what I
19 did	
20	I took the map of the pipeline and in yellow here
21 is 1	the predicted PRI, this is the federal formula so the
22 pred	dicted impact radius if we move that along the whole
23 pipe	pline it is grossly deficient. If we expand it out to
24 1400) feet which is Clayburn, Texas or 2.5 times which is San
l _{25 Brui}	no, we can see that the Indian Point Nuclear Power Plant

		149
	1	is 50% engulfed with flames - that's a serious problem.
PM4-329	2	As I was looking at this research in this project
	3	I discovered the existing pipelines under the Indian Point
	4	and I just think that that is an extremely serious problem
	5	because that this doesn't even look at the existing
	6	pipeline. Upstream impacts 313 families have contaminated
	7	water. In Susquehanna County where this pipeline will
	8	originate the gas from, downstream impacts, radon gas in New
	9	York City you've been hearing this over and over again in
	10	many different FERC projects.
PM4-330	11	Project segmentation, illegal under NEPA, you
	12	were ordered by a federal court not to segment projects and
	13	it seems like you still are segmenting projects. I'm just
	14	wondering is FERC a roque agency or do you follow the law?
	15	MS. SUTER: I'm sorry sir, your time is up.
	16	MR. HUSTON: Do you follow the law?
	17	Ms. LEE: Okay we are in the 90's folks so if you
	18	got a 90's ticket come closer please. 90? 91?
	19	MS. LOWY: Hi Erin Lowy E-r-i-n L-o-w-y. I'm
	20	here as a concerned citizen regarding Spectra Energy's
	21	Expansion Project in the Algonquin Incremental Market
	22	National Gas Pipeline. I have lived in Westchester County
	23	my whole life and began raising a family in Peekskill six
	24	and a half years ago. We moved to our neighborhood in Blue
	25	Lawn Park because we loved that it was family oriented and

PM4-329 See the responses to comments FA4-24, SA-4, and SA14-11.

PM4-330 See the response to comment FA3-5.

		150
	1	located in the wonderful Hudson School District.
	2	In recent months we have learned about the
	3	proposal and have grown more and more distressed with each
PM4-331	4	piece mail I learn. Now I fear for the health and safety
	5	of my family and neighbors due to this unnecessary
	6	expansion. In addition to the school district I am so
	7	proud of may disintegrate as residents in our area leave
	8	because of this.
	9	The health and safety risks are unfathomable
	10	emitting dangerous and harmful chemicals into the air and
	11	ground, exposing themselves to people, animals and water
	12	supplies. This project will disturb the delicate
	13	infrastructure in and around residential neighborhoods,
	14	playgrounds and parks, houses of worship, businesses, fault
	15	lines and a really volatile Indian Point as well as the only
	16	450 feet from my son's beloved elementary school Buchanan
5	17	Verplanck where he is a first grader and my daughter is to
	18	start kindergarten next fall. We don't deserve this. I
	19	didn't move to this area to raise my family living in fear.
	20	Now my family may leave the area if the proposal passes, if
I	21	selling a home is even possible.
	22	It is unacceptable and irresponsible. We the
	23	citizens are now asking you to do what you were appointed to
- 1	24	do. Be our voice and stand up for us. Call for a
PM4-332	25	comprehensive, independent and transparent assessments of

PM4-331 Section 4.12.1 of the EIS discusses federal safety standards for natural gas pipelines and how these standards are applied in HCAs. Section 4.12.3 of the EIS discusses safety-related concerns and other specific measures that Algonquin has proposed or that we are recommending to further address public safety concerns. See also the responses to comments FA4-25 and SA1-9.

PM4-332 See the responses to comments FA4-25, SA4-1, SA4-9, SA4-10, and SA4-15.

	151
PM4-332	Spectra Energy's AIM Pipeline Expansion Project fully
(cont'd)	addressing all impacts, including baseline air testing, risk
	assessment, a state environment prior review and a health
	impact assessment before approving this project. Thank
1,	you.
	MS. LEE: 927 I have 93, 947 957 967 977 987 997
	Okay we have hit 100. 101? Are you 101? Or what number
ŧ	do you have? Well ckay, 2, 3 and 4 are up here with me so
X	do we have a 105 or 106? Okay, you're up.
10	MR. SCHNEIDER: Good evening, my name is Joe
11	Schneider S-c-h-n-e-i-d-e-r. I am the training director for
PM4-333	Local 137 right here in Montrose. I have heard a lot of
1.5	discussion tonight and I don't want to go over and beat a
14	dead horse as to speak.
15	I look around here and I think I'm probably the
16	last speaker and I think I'm kind of by myself here but I
15	find a couple things ironic. Our members are now putting
15	the gas line up through Watch Hill Road going into a new
15	development and we hear you know about you know natural gas.
20	You know, where is the natural gas coming from in the
21	future?
22	My father worked on the pipeline that came
23	through the town of Yorktown where I'm a lifelong resident
24	years ago. I sat on his lap every Saturday. I walked
25	there, rode my bike there and watched them build that

PM4-333 Comment noted.

		152
PM4-333 (cont'd)	1	pipeline. Like myself, getting old and rundown so is the
	2	pipeline. I can't guarantee what's going to happen to you
	3	know, where this line is going to go. I will say this
	4	though, my members and members of Local 60 that door here in
	5	force tonight.
	6	We train, all right, I send members to learn how
	7	to run these pipelines all over the country all right.
	В	What I am going to say to you is when, if this pipeline
	9	either has to be repaired, removed or a new one is put in,
	10	Local 137, Local 60 are going to do everything they can to
	11	protect these people in these neighborhoods no matter where
	12	it goes and that's all I have to say, goodnight and thank
	13	you.
	14	MS. SUTER: Now someone in the back confirm for
	15	me that that was my last speaker. Do you have a ticket?
	16	If you don't have a ticket, all right come on up, you are
	17	the last speaker.
	18	MS. CECONI-CAVALIERI: Good evening my name is
	19	Amy Ceconi-Calilieri that's C as in Charles, -e-c-o-n-I
	20	hyphen C as in Charlesa-v as in Victor a1-i-e-r-i.
	21	On behalf of the Hudson High School parents I would like to
	22	present this Petition in opposition to the Spectra Pipeline
PM4-334	23	Expansion. 40 parents were unable to attend tonight's
	24	hearing due to Back to School Night and wish to express
	25	their concerns and request that further environmental

PM4-334 Comment noted. See also the responses to comments FA4-1 and FA6-5.

1 impacts studies are completed before any approvals are 2 granted, thank you. MS. SUTER: All right. With that being our last 4 speaker the formal part of our meeting will close. I'm going to remind everyone that for those of you who are left, 6 within FERC there is a website www.ferc.gov. There's a link for e-library. You can type in the docket number CP14-96. You can use e-library to gain access to everything on the record for this project. That is everything that has been filed by 11 Algonquin. Everything that has been issued by FERC by staff, anybody, every comment that has been made by the public or any other agency. After a few weeks the transcripts for this meeting will be placed on the public record. However, if you would like to receive copies of the transcription before our posting, they will be available 17 at a cost through the court reporter. Please see him if you are interested. On behalf of the Federal Energy Regulatory 20 Commission I want to thank you all for coming here tonight. Let the record show that the meeting concluded at 10:30 22 P.M. 23 24 25
